	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False			No Information			True
New	Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<i>allowed values:</i> -999999						
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
	Predominant Average Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average water velocity, exclusive of high water due to runoff or low water due to drought.
	<i>allowed values:</i> [-999999, -999999]						
	Predominant Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<i>allowed values:</i> [-999999, -999999]						
	Inland Waterbody Bank (1) : Predominant Waterbody Bank Height (first bank)	1	[-999999, -999999]	REAL_Interval	Metre	0	The predominant height (the height of at least 50 percent) of the bank, measured from mean water level to the first break in slope above the mean water level.
	<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
	<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
	Inland Waterbody Bank (2) : Predominant Waterbody Bank Slope (second bank)	1	[-999999, -999999]	REAL_Interval	Percent	0	The predominant slope (the slope of at least 50 percent) of the bank, measured from mean water level to the first accessible break in slope above the mean water level. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
	<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
	<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<i>allowed values:</i> U						

Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Inland Waterbody Bank (1) : Shoreline Delineated (first bank)	1	No Information	Boolean	Unitless	0	An indication that the delineation of a shoreline is definite. [Description] The delineation of the shoreline along a beach is typically definite whereas along a mangrove swamp it is typically indefinite.
allowed values:	False		No Information	True		
allowed values:	False		No Information	True		
Inland Waterbody Bank (1) : Shoreline Type (first bank)	1	No Information	Enumeration	Unitless	0	The physical characteristics of a shoreline.
allowed values:	Building Rubble Marshy Sandy		Erosion Rubble Mud Shingly		Ice No Information Stony	
allowed values:	Building Rubble Marshy Sandy		Erosion Rubble Mud Shingly		Ice No Information Stony	
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
New Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
allowed values:	-999999					
New Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
allowed values:	-999999					

	Terrain Gap Width	1	-999999	REAL	Metre	0	The minimum horizontal bridging distance necessary to cross a channel. [Description] The width is measured perpendicular to the direction of water flow from bank to bank, at the first usable break in slope on each side of the channel above mean high water. Usable banks are those accessible by vehicles; small unusable ledges and cliffs are not considered usable breaks in slopes.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<i>allowed values:</i> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<i>allowed values:</i> No Information						
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i> -999999						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i> Contaminated Potable			No Information Treatable			Nonpotable Other
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.
	<i>allowed values:</i> Alkaline Mineral Saline			Brackish No Information Seawater		Brine Not Applicable	Fresh Other
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
	<i>allowed values:</i> Agricultural Irrigation Institutional Other			Commercial Livestock Power Generation		Domestic Irrigation Municipal Recreational	Industrial No Information Sanitary Domestic
	Inland Waterbody Bank (2) : Waterbody Bank Height (second bank)	1	-999999	REAL	Metre	0	The height of the waterbody bank above the average water level.
	<i>allowed values:</i> -999999						
	<i>allowed values:</i> -999999						
	Inland Waterbody Bank (1) : Waterbody Bank Vegetation Cover (first bank)	1	[-999999, -999999]	REAL_Interval	Percent	0	The fraction of vegetation cover on the bank of a watercourse.
	<i>allowed values:</i> [-999999, -999999]			Closed Interval		Greater-than or Equal Semi-interval	Greater-than Semi-interval
	Greater-than to Less-than-or-equal Interval			Greater-than-or-equal to Less-than Interval		Less-than or Equal Semi-interval	Less-than Semi-interval
	Open Interval						

allowed values: [-999999, -999999]
 Greater-than to Less-than-or-equal Interval
 Open Interval

Closed Interval
 Greater-than-or-equal to Less-than Interval

Greater-than or Equal Semi-interval
 Less-than or Equal Semi-interval

Greater-than Semi-interval
 Less-than Semi-interval

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Dolphin (Point 00)

New ☐ Dolphin

A post or group of posts used for mooring, warping a ship or as an aid to navigation.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
allowed values: -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
allowed values: No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	BB080	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: BB080						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). Feature DragonsTeeth (Line 00)New ☐ Dragon's Teeth

Upward-pointing obstacles laid in the ground to slow or stop the movement of vehicles. [Description] Typically constructed of regularly spaced concrete or metal shapes laid in single or multiple rows.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AL060	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL060						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
allowed values:	Composition Other		Concrete Steel			Masonry Stone No Information
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
allowed values:	-999999

Feature DredgedArea (Area 00) New ☐ Dredged Area

An area of the bottom of a body of water (for example: a channel) which has been deepened by dredging.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Hydrographic Depth : Sounding Metadata : Bathymetric Measurement Quality Category	3	No Information	Enumeration	Unitless	0	A general evaluation of the qualities of a bathymetric measurement, as a category. [Description] Drying heights are typically captured using negative (bathymetric) sounding values; their certainty of measurement may be categorized in the same manner as positive values.
<i>allowed values:</i> Depth Doubtful Least Depth <i>Not Applicable</i> Unconfirmed Depth			Depth Known Maintained Depth <i>Other</i> Unmaintained Depth			Depth Unreliable <i>No Information</i> Safe Clearance Known
Hydrographic Depth : Sounding Metadata : Bathymetric Measurement Technique	3	No Information	Enumeration	Unitless	0	The technique used to determine water depth(s).
<i>allowed values:</i> Area Swept by Side-scan Sonar Computer Generated Lead-line <i>Other</i> Singlebeam			Area Swept by Vertical Acoustic System Diver Levelling Photogrammetry Underwater Utility Vehicle			Bathymetric LiDAR Electromagnetic Sensor <i>No Information</i> Side-scan Sonar
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National State			Joint Military and Civilian <i>No Information</i>			Military <i>Other</i> Municipal Province
Description of Aids to Navigation	1	No Information	String	Unitless	2E+09	Textual description of aids to navigation marking a feature. [Description] For example, 'marked by buoys'.
<i>allowed values:</i> <i>No Information</i>						
<i>New</i> Feature Code	1	FC034	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> FC034						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> <i>No Information</i>						
Hydrographic Depth	1	-999999	REAL	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
Maintained	1	No Information	Boolean	Unitless	0	An indication that a feature is maintained.
allowed values: False						
Maritime Navigation Marked	1	No Information	Boolean	Unitless	0	An indication that a feature is significant to maritime safety of navigation and is marked (for example: by a light or beacon) by a maritime-specific navigational aid. [Description] Mariners may also use other prominent features (for example: rotating aeronautical beacons or lighted structures) for informal navigational purposes.
allowed values: FALSE						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature DriveInTheatre (Area 00)

New ☐ Drive-in Theatre

A place where motion pictures are shown while viewers remain in their vehicles.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AK070	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AK070						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Amusement Meeting Place Restroom			Cinema No Information			Convenience Store Other Emergency Operations Recreation
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True

New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> <i>Damaged</i> <i>Destroyed</i> <i>Dismantled</i> <i>Intact</i> <i>No Information</i> <i>Ruined</i> <i>Site Preparation</i> <i>Under Construction</i> <i>Unmaintained</i>

<i>allowed values:</i> <i>No Information</i>							
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> <i>No Information</i>							
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> <i>No Information</i>							
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature DryDock (Area 00)New ☐ Dry Dock**An artificial basin fitted with a gate or caisson into which vessels can be floated and the water pumped out to expose the bottom of the vessel.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BB090	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BB090						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
New Maximum Water Depth	1	-999999	Real	Metre		Maximum water depth the object was designed to hold.

<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False No Information True						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged Destroyed Dismantled Intact No Information Ruined Site Preparation Under Construction Unmaintained						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature ElectricPowerStation (Area 00)New ☐ Electric Power Station

A facility including one or more buildings and equipment used for electric power generation. [Description] An electric power station consists of one or more power generating units, each consisting of the full set of equipment required to generate power and capable of independent operation. The power generating units are located on one or more contiguous or adjacent properties, are under the common control of the same entity and supply power through a common connection to the electric grid. Electric power stations most commonly are used to generate electricity for long distance transmission.

<i>allowed values:</i> No Information						

Geographic Name Information : Name Identifier		1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.			
<i>allowed values:</i> No Information										
Navigation Landmark		1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.			
<i>allowed values:</i> False				No Information			True			
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.			
	<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction			
New	Power Source	3	No Information	Enumeration	Unitless	0	The energy source(s) employed to generate power for off-site distribution.			
	<i>allowed values:</i> Geothermal Other			Hydro-electric Thermal		No Information Tidal	Nuclear			
Restriction Information : Security Attributes Group (resource classification)		1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.			
<i>allowed values:</i> U										
Process Step Information : Resource Content Originator		1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.			
<i>allowed values:</i>				Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)		Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)		1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.			
<i>allowed values:</i> No Information										
Restriction Information : Security Attributes Group (resource owner-producer)		1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.			
<i>allowed values:</i> No Information										
Specified Domain Values(s)		1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.			
<i>allowed values:</i> No Information										

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
allowed values: Brick Metal Reinforced Concrete						
Concrete No Information Steel						
Iron Other Stone						
Masonry Prestressed Concrete Wood						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature ElevationContour (Line 00)New ☐ Elevation Contour**A line connecting points having the same elevation value relative to a vertical datum.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Elevation Surface Category	1	No Information	Enumeration	Unitless	0	The category of surface for which an elevation is determined.
allowed values: Inland Water Vegetation						
Land Water						
No Information						
Snow Field and/or Ice-field						
New Feature Code	1	CA010	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: CA010						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
allowed values: -999999						
Hypsography Portrayal Type	1	No Information	Enumeration	Unitless	0	The type of a hypsographic portrayal line (for example: a contour line) based on the topography represented and/or portrayal interval. [Description] A contour line is an imaginary line on the ground connecting an infinite number of points of equal elevation. The vertical measurement between two contour lines is called the contour interval. Contour lines are numbered to indicate the elevation value of the contour line.

Feature Embankment (Area 00) New ☐ Embankment

A man-made raised long mound of earth or other material.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Embankment Type	1	No Information	Enumeration	Unitless	0	The type of an embankment based on its use and/or relationship to the surrounding terrain.
<i>allowed values:</i> Divider Mound			Dyke No Information			Fill Other Levee
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	DB090	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i> DB090						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Grading Type	1	No Information	Enumeration	Unitless	0	The number of terrain feature sides on which either fill or cut material is exposed. [Description] For example, along two sides of a road that is both cut into the side of a hill and supported by fill on the downslope.
<i>allowed values:</i> Many Sides Other			No Information Two Sides			No Sides One Side
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i> No Information							
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i> No Information							
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.	
<i>allowed values:</i> No Information							
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.	
<i>allowed values:</i> No Information							
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.	

<i>allowed values:</i>	No Information					
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i>	Boulders Masonry Rubble		Concrete No Information Soil		Gravel Other	Lava Rock
Surface Slope	1	[-999999, -999999]	REAL_Interval	Percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.
<i>allowed values:</i>	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval	Greater-than Semi-interval Less-than Semi-interval
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i>	Aqueduct Other		Canal Pipeline		No Information Railway	No Transportation System Road
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i>	No Information					
Water Level Effect	1	No Information	Enumeration	Unitless	0	The relationship between the feature and surrounding (including covering and/or underlying) water.
<i>allowed values:</i>	Always Dry Covers and Uncovers Partly Submerged		Always Submerged No Information		Awash at Chart Datum Not Applicable	Awash at Low Water Other
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.		
<i>allowed values:</i> -999999								
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.		
<i>allowed values:</i> -999999								
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.		
<i>allowed values:</i> No Information								
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.		
<i>allowed values:</i> No Information								
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.		
<i>allowed values:</i> False			No Information			True		
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.		
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation	Intact Under Construction	
Predominant Feature Height	1	-999999	REAL	Metre	0	The predominant height (the height of at least 50 percent) of the feature measured from the lowest point of the base at ground or water level (downhill side/downstream side).		
<i>allowed values:</i> -999999								

Restriction Information : Security Attributes Group (resource classification)		1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U							
Process Step Information : Resource Content Originator		1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)		1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information							
Restriction Information : Security Attributes Group (resource owner-producer)		1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information							
Specified Domain Values(s)		1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information							
Structural Material Type		3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i>							
	Boulders			Concrete		Gravel	Lava
	Masonry			No Information		Other	Rock
	Rubble			Soil			
Surface Slope		1	[-999999, -999999]	REAL_Interval	Percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.
<i>allowed values:</i> [-999999, -999999]				Closed Interval		Greater-than or Equal Semi-interval	Greater-than Semi-interval
	Greater-than to Less-than-or-equal Interval			Greater-than-or-equal to Less-than Interval		Less-than or Equal Semi-interval	Less-than Semi-interval
	Open Interval						
Transportation System Type		3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i>							
	Aqueduct			Canal		No Information	No Transportation System
	Other			Pipeline		Railway	Road

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Water Level Effect	1	No Information	Enumeration	Unitless	0	The relationship between the feature and surrounding (including covering and/or underlying) water.
<i>allowed values:</i>	Always Dry Covers and Uncovers Partly Submerged		Always Submerged No Information		Awash at Chart Datum <i>Not Applicable</i>	Awash at Low Water Other

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.

<i>allowed values:</i>	Boulders Masonry Wood		Brick No Information		Concrete Other	<i>Earthen</i> Reinforced Concrete
Terrain Gap Width	1	-999999	REAL	Metre	0	The minimum horizontal bridging distance necessary to cross a channel. [Description] The width is measured perpendicular to the direction of water flow from bank to bank, at the first usable break in slope on each side of the channel above mean high water. Usable banks are those accessible by vehicles; small unusable ledges and cliffs are not considered usable breaks in slopes.
<i>allowed values:</i>	-999999					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i>	No Information					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature EngineTestCell (Area 00)New ☐ Engine Test Cell

A structure wherein aircraft or rocket engines are tested. [Description] The most common test cells are used for testing the performance characteristics of jet engines and are typically located at military aerodromes or aerospace research and development facilities. Test cells for liquid-fueled rocket booster engines are unique, massive structures (for example: the test cell located at Stennis Space Flight Center in the U.S.).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i>	<i>False</i>		No Information			<i>True</i>
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i>	-999999					
Engine Test Cell Type	1	No Information	Enumeration	Unitless	0	The type of an engine test cell based on the purpose for which it was designed.
<i>allowed values:</i>	Jet Engine Dismounted Rocket Engine Horizontal		Jet Engine Mounted Rocket Engine Upright			No Information Other
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i>	No Information <i>Partially Operational</i>		Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AF060	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i>	AF060					

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Location Referenced to Shoreline	1	No Information	Enumeration	Unitless	0	The location of an object in relation to a land water boundary.
<i>allowed values:</i> At Shoreline			Inland			No Information Offshore
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values: False			No Information			True
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature ExcavatingMachine (Line 00)

New ☐ Excavating Machine

A mechanical device for removing materials from the ground. [Description] For example, a dredger, a powershovel, and a dragline.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AF050	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AF050						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999						
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999						
New	Least Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling.
	<i>allowed values:</i> -999999						
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False			No Information			True
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
	Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.

allowed values:	Basalt Clay Diatomaceous Earth Granite Manganese <a>No Information Pumice Sand Stone Vanadium	Bauxite Coal Dolomite Gravel Marble <a>Other Quartz Sandstone Tin Zinc	Chalk Copper Fluorite Iron Mica Phosphate Rock Selenium Travertine	Chromium Diamond Gold Lead Nickel Porphyry Salt Silver Uranium		
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values:	<a>U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) <a>No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) <a>Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	<a>No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	<a>No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	<a>No Information					
Underground Mine Access	1	No Information	Enumeration	Unitless	0	The means by which an underground mine is accessed from the surface. [Description] For example, by a tunnel or a shaft.
allowed values:	Drift Slope	<a>No Information	<a>Not Applicable		Shaft	

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
----------------------------	---	----------------	-------------	----------	---	---

allowed values: Below Ground Surface

No Information

On Surface

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: Chemical Mining
Other

Metal Ore Mining
Peat Extraction

Mineral Mining
Salt Extraction

No Information
Solid Mineral Fuel Mining

	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The type of designated hazard protection shelter based on the kind of emergency. [Description] These shelters may be inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
	<i>allowed values:</i> Bomb Shelter Storm Shelter			Fallout Shelter			No Information Other
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999						
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999						
New	Least Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling.
	<i>allowed values:</i> -999999						
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.

Feature Facility (Area 00)

New ☐ Facility

An area that has been developed to perform a specific principal function, consisting of one or more vertical constructions (for example: structures or buildings), horizontal constructions (for example: pavements, roads, rail tracks, or bridges), and/or supporting utilities (for example: power lines, water supply, or sewerage), plus the underlying land. [Description] For example, an industrial plant consisting of building(s), shipping dock(s), storage area(s), power transformer(s), heating and/or cooling equipment, vehicle parking, roads, railroad tracks, and perimeter fences and gates.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.

allowed values: No Information

Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
----------------------	---	---------	------	------------	---	---

allowed values: -999999

Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.

allowed values: Ash
Other
Sewage

Cinders
Radioactive Material
Slag

No Byproduct
Refuse

No Information
Scrap-metal

New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<i>allowed values:</i> -999999						
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Device Power Type	1	No Information	Enumeration	Unitless	0	The method by the device is powered, if any.
	<i>allowed values:</i> Compressed Air No Information			Electricity Other			Gravity Petroleum Product Manual Steam
New	Water Resource Information : Device Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the device and the underlying ground (terrain), liquid or waterbody bottom.

Geographic Name Information : Full Name 1 No Information String Unitless 200 A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.

allowed values: No Information

Geographic Name Type 3 No Information Enumeration Unitless The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.

allowed values:

Conventional
Native Transliterated
Unverified Original

Historical Original
No Information
Unverified Transliterated

Historical Transliterated

Native Original
Provisional
Variant Transliterated

Height Above Surface Level 1 -999999 REAL Metre 0 The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.

allowed values: -999999

Highest Elevation 1 -999999 REAL Metre 0 The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.

allowed values: -999999

New Hospital Bed Count 1 -999999 Integer Unitless The number of beds in a hospital.

allowed values: -999999

Length 1 -999999 REAL Metre 0 The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

allowed values: -999999

New Water Resource Information : Magnesium Concentration 1 -999999 Real Milligrams per Litre The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.

allowed values: -999999

Note : Memorandum 1 No Information String Unitless 2E+09 A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.

allowed values: No Information

Geographic Name Information : Name Identifier		1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information							
Navigation Landmark		1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False				No Information			True
New	Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999							
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained				Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Manufacturing Information : Product		3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Aircraft Biochemical Chemical Coke Cotton Electronic Equipment Fluorine Gas Ice Liquefied Natural Gas (LNG) Metal Munitions Not Applicable Paper Petroleum and/or Natural Gas Prestressed Concrete Salt Steel Uranium Wine				Aluminum Biodiesel Clothing Concrete Desalinated Water Explosive Food Glass Iron Liquefied Petroleum Gas (LPG) Milk No Information Nuclear Fuel Petrochemical Petroleum Lubricant Radioactive Material Sewage Sugar Vegetation Product Zinc			Ammunition Brick Coal Consumer Goods Electric Power Fertilizer Frozen Water Gold Lead Lumber Milled Grain No Product Olive Oil Petrol Phosphorus Rice Silver Textile Water
							Asphalt Cement Coffee Copper Electrical Equipment Fish Fruit Heating Steam and/or Water Lime Manganese Motor Vehicle Non-solid Hydrocarbon Fuel Other Petroleum Plastic Rubber Snow Tobacco Whale Products
New	Water Resource Information : Pump Type	1	No Information	Enumeration	Unitless	0	The type of pump used to move liquid or semi-liquid material from one location to another.
<i>allowed values:</i> Airlift No Information Turbine				Centrifugal Other Vacuum			Gravity Reciprocating Jet Rotary
New	Water Resource Information : Purification Process	1	No Information	Enumeration	Unitless		Water purification process
<i>allowed values:</i> Blending Filtration No Information Vapor Compression				Desalination Freezing Other			Disinfection Multi-effect evaporation Reverse Osmosis Electrolysis Multi-stage flash Sedimentation/coagulation
Manufacturing Information : Raw Material		3	No Information	Enumeration	Unitless	0	The principal 'raw', or input, material(s) involved in a production activity. [Description] If multiple 'raw' materials are specified then they are usually listed in descending order of importance.

allowed values:	Aluminum Chemical Copper Gold Lumber No Raw Material Paper Radioactive Material Snow Tobacco Wood	Asphalt Clay Cotton Ice Manganese Oil Petroleum and/or Natural Gas Rubber Steel Uranium Zinc	Bauxite Coal Gas Iron Metal Ore Plant Material Sewage Sugar Vegetation	Cement Coke Glass Lead No Information Other Plastic Silver Textile Water		
Religious Information : Religious Designation	1	No Information	Enumeration	Unitless	0	A designation denoting a religion or system of belief.
allowed values:	Buddhism Islam Orthodox Shia	Chaldean Judaism Other Shinto	Christian Nestorian Protestant Sunni	Hinduism No Information Roman Catholic		
Religious Information : Religious Facility Type	1	No Information	Enumeration	Unitless	0	The type of a facility, building, structure or site that is designed and designated to be used for religious activities, based on its structure and/or the principal activity for which it was designed.
allowed values:	Burial Site Convent Mission Noviciate Retreat Synagogue	Cathedral Hermitage Monastery Other Seminary Tabernacle	Chapel Marabout Mosque Pagoda Shrine Temple	Church Minaret No Information Religious Community Stupa		
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values:	U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					

	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
	<u>allowed values:</u> No Information						
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
	<u>allowed values:</u> No Information						
New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units		The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<u>allowed values:</u> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<u>allowed values:</u> No Information						
	Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
	<u>allowed values:</u> Adobe Brick Fibreglass Metal Plant Material Steel			Aluminum Glass Mud-based Construction Prestressed Concrete Stone		Brick Iron No Information Reinforced Concrete Treated Timber	Concrete Masonry Other Sod Wood
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime		The electrical conductivity of water.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Water Flow	1	-999999	Real	Cubic Metres per Hours		The rate of water flow through or exiting from a feature.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre		The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<u>allowed values:</u> -999999						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless		The potability of water based on the type of treatment required before it is safe for human consumption.
	<u>allowed values:</u> Contaminated Potable			No Information Treatable		Nonpotable	Other
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.

	<i>allowed values:</i>	Alkaline Mineral Saline		Brackish No Information Seawater		Brine Not Applicable		Fresh Other
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.		
	<i>allowed values:</i>	Agricultural Irrigation Institutional Other		Commercial Livestock Power Generation		Domestic Irrigation Municipal Recreational		Industrial No Information Sanitary Domestic
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.	
	<i>allowed values:</i>	-999999						
	Wireless Telecommunication Information : Wireless Telecommunication Type	1	No Information	Enumeration	Unitless	0	The type of a wireless telecommunication service based on the mechanism(s) of transmission and/or the nature of the communication(s) supported. [Description] For example, radio broadcast or mobile phone service.	
	<i>allowed values:</i>	Cellular Phone Other Television (TV)		Microwave Radio Relay Radio Broadcast		Mobile Phone Radio Telephone		No Information Radio-telegraph

Feature Facility (Point 00)

New ☐ Facility

An area that has been developed to perform a specific principal function, consisting of one or more vertical constructions (for example: structures or buildings), horizontal constructions (for example: pavements, roads, rail tracks, or bridges), and/or supporting utilities (for example: power lines, water supply, or sewerage), plus the underlying land. [Description] For example, an industrial plant consisting of building(s), shipping dock(s), storage area(s), power transformer(s), heating and/or cooling equipment, vehicle parking, roads, railroad tracks, and perimeter fences and gates.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<u>allowed values:</u> No Information						
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<u>allowed values:</u> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<u>allowed values:</u> -999999						
Manufacturing Information : By-product	3	No Information	Enumeration	Unitless	0	The principal by-product(s) of a production, mining, or agricultural activity. [Description] If multiple by-products are specified then they are usually listed in descending order of importance.

<i>allowed values:</i> Ash Other Sewage			Cinders Radioactive Material Slag		No Byproduct Refuse	No Information Scrap-metal
New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999						
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999						
	Controlling Authority	1	No Information	Enumeration	Unitless 0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State		Joint Military and Civilian Other	Military Private
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999						
New	Water Resource Information : Device Power Type	1	No Information	Enumeration	Unitless 0	The method by the device is powered, if any.
<i>allowed values:</i> Compressed Air No Information			Electricity Other		Gravity Petroleum Product	Manual Steam
New	Water Resource Information : Device Relative Location	1	No Information	Enumeration	Unitless 0	The relationship between the device and the underlying ground (terrain), liquid or waterbody bottom.
<i>allowed values:</i> Above Surface On Waterbody Bottom			Below Ground Surface Other		No Information Submerged	On Surface
	Facility Operational Status	1	No Information	Enumeration	Unitless	The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned		Not in Operation Temporarily Non-operational	Operational
New	Feature Code	1	AL010	CONSTRAINED_STRING	Unitless 5	Feature Code
<i>allowed values:</i> AL010						
	Feature Function	3	No Information	Enumeration	Unitless 0	The purpose(s) of, or intended role(s) served by, the feature.

Height Above Surface Level 1 -999999 REAL Metre 0 The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.

allowed values: -999999

Highest Elevation 1 -999999 REAL Metre 0 The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.

allowed values: -999999

New Hospital Bed Count 1 -999999 Integer Unitless The number of beds in a hospital.

allowed values: -999999

Length 1 -999999 REAL Metre 0 The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

allowed values: -999999

New Water Resource Information : Magnesium Concentration 1 -999999 Real Milligrams per Litre The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.

allowed values: -999999

Note : Memorandum 1 No Information String Unitless 2E+09 A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.

allowed values: No Information

	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False		No Information				True
New	Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<i>allowed values:</i> -999999						
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
	Manufacturing Information : Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
	<i>allowed values:</i> Aircraft Biochemical Chemical Coke Cotton Electronic Equipment Fluorine Gas Ice Liquefied Natural Gas (LNG) Metal Munitions Not Applicable Paper Petroleum and/or Natural Gas Prestressed Concrete Salt Steel Uranium Wine			Aluminum Biodiesel Clothing Concrete Desalinated Water Explosive Food Glass Iron Liquefied Petroleum Gas (LPG) Milk No Information Nuclear Fuel Petrochemical Petroleum Lubricant Radioactive Material Sewage Sugar Vegetation Product Zinc			Ammunition Brick Coal Consumer Goods Electric Power Fertilizer Frozen Water Gold Lead Lumber Milled Grain No Product Olive Oil Petrol Phosphorus Rice Silver Textile Water
							Asphalt Cement Coffee Copper Electrical Equipment Fish Fruit Heating Steam and/or Water Lime Manganese Motor Vehicle Non-solid Hydrocarbon Fuel Other Petroleum Plastic Rubber Snow Tobacco Whale Products
New	Water Resource Information : Pump Type	1	No Information	Enumeration	Unitless	0	The type of pump used to move liquid or semi-liquid material from one location to another.
	<i>allowed values:</i> Airlift No Information Turbine			Centrifugal Other Vacuum			Gravity Reciprocating Jet Rotary
New	Water Resource Information : Purification Process	1	No Information	Enumeration	Unitless		Water purification process
	<i>allowed values:</i> Blending Filtration No Information Vapor Compression			Desalination Freezing Other			Disinfection Multi-effect evaporation Reverse Osmosis Electrolysis Multi-stage flash Sedimentation/coagulation
	Manufacturing Information : Raw Material	3	No Information	Enumeration	Unitless	0	The principal 'raw', or input, material(s) involved in a production activity. [Description] If multiple 'raw' materials are specified then they are usually listed in descending order of importance.

allowed values:	Aluminum Chemical Copper Gold Lumber No Raw Material Paper Radioactive Material Snow Tobacco Wood	Asphalt Clay Cotton Ice Manganese Oil Petroleum and/or Natural Gas Rubber Steel Uranium Zinc	Bauxite Coal Gas Iron Metal Ore Plant Material Sewage Sugar Vegetation	Cement Coke Glass Lead No Information Other Plastic Silver Textile Water		
Religious Information : Religious Designation	1	No Information	Enumeration	Unitless	0	A designation denoting a religion or system of belief.
allowed values:	Buddhism Islam Orthodox Shia	Chaldean Judaism Other Shinto	Christian Nestorian Protestant Sunni	Hinduism No Information Roman Catholic		
Religious Information : Religious Facility Type	1	No Information	Enumeration	Unitless	0	The type of a facility, building, structure or site that is designed and designated to be used for religious activities, based on its structure and/or the principal activity for which it was designed.
allowed values:	Burial Site Convent Mission Noviciate Retreat Synagogue	Cathedral Hermitage Monastery Other Seminary Tabernacle	Chapel Marabout Mosque Pagoda Shrine Temple	Church Minaret No Information Religious Community Stupa		
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values:	U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					

	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
	<u>allowed values:</u> No Information						
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
	<u>allowed values:</u> No Information						
New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units		The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<u>allowed values:</u> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<u>allowed values:</u> No Information						
	Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
	<u>allowed values:</u> Adobe Brick Fibreglass Metal Plant Material Steel			Aluminum Glass Mud-based Construction Prestressed Concrete Stone		Brick Iron No Information Reinforced Concrete Treated Timber	Concrete Masonry Other Sod Wood
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime		The electrical conductivity of water.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Water Flow	1	-999999	Real	Cubic Metres per Hours		The rate of water flow through or exiting from a feature.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre		The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<u>allowed values:</u> -999999						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless		The potability of water based on the type of treatment required before it is safe for human consumption.
	<u>allowed values:</u> Contaminated Potable			No Information Treatable		Nonpotable	Other
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.

	<i>allowed values:</i>	Alkaline Mineral Saline	Brackish No Information Seawater	Brine Not Applicable	Fresh Other		
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.	
	<i>allowed values:</i>	Agricultural Irrigation Institutional Other	Commercial Livestock Power Generation	Domestic Irrigation Municipal Recreational	Industrial No Information Sanitary Domestic		
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
	<i>allowed values:</i>	-999999					
	Wireless Telecommunication Information : Wireless Telecommunication Type	1	No Information	Enumeration	Unitless	0	The type of a wireless telecommunication service based on the mechanism(s) of transmission and/or the nature of the communication(s) supported. [Description] For example, radio broadcast or mobile phone service.
	<i>allowed values:</i>	Cellular Phone Other Television (TV)	Microwave Radio Relay Radio Broadcast	Mobile Phone Radio Telephone	No Information Radio-telegraph

Feature Fairground (Area 00)

New ☐ Fairground

An area where permanent facilities exist to hold outdoor fairs, circuses or exhibitions.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition	
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.	
<i>allowed values:</i> No Information							
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.	
<i>allowed values:</i> -999999							
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.	
<i>allowed values:</i> No Information			Non-operational			Not in Operation	
Partially Operational			Planned			Temporarily Non-operational	
New	Feature Code	1	AK090	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AK090							
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.	

<i>allowed values:</i>	Administration Dining Hall Meeting Place Out-patient Care Restroom Transport		Amusement Emergency Operations Museum Recreation Retail Banking		Animal Boarding <i>Food Service</i> <i>No Information</i> Religious Activities Security Enforcement		Auditorium Market <i>Other</i> Restaurant Theatre
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.	
<i>allowed values:</i>	<i>No Information</i>						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.	
<i>allowed values:</i>	<i>-999999</i>						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.	
<i>allowed values:</i>	<i>-999999</i>						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<i>allowed values:</i>	<i>-999999</i>						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i>	<i>No Information</i>						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i>	<i>No Information</i>						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.	
<i>allowed values:</i>	<i>False</i>		<i>No Information</i>		<i>True</i>		
Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.	
<i>allowed values:</i>	<i>Damaged</i> <i>No Information</i> <i>Unmaintained</i>		<i>Destroyed</i> <i>Ruined</i>		<i>Dismantled</i> <i>Site Preparation</i>		<i>Intact</i> <i>Under Construction</i>
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
<i>allowed values:</i>	<i>U</i>						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature FeatureAttGAMetadata (Area 00)

New ☐ Feature Attribute GEOINT Assurance Metadata

A modeling entity collecting assurance information about the quality of the digital representation of a Geospatial Intelligence (GEOINT) feature attribute. [Description] For example, the currency of the information known about a feature attribute or the degree to which the attribute value is accurately and/or completely determined.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Currency Date and Time	1	No Information	Constrained_String	Unitless	20	The date and, optionally, time assigned to a data set (for example: the digital representation of a single feature or a set of features) as a whole that provides an overall assessment of its currency. [Description] Often known as the 'as of' date, the overall currency of a data set is affected by knowledge of the source(s) and processes used to define the location, geometry, and other properties (attributes and associations) of the digital representation.
<u>allowed values:</u> No Information						
Data Quality Statement	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records a general assessment of the quality of a resource (for example: a data instance, a data set or a data processing activity). [Description] The quality of a data resource is dependent on the data providers knowledge regarding the lineage of the data and the processes that have been used to transform that data. No restriction is placed on the length of the statement.
<u>allowed values:</u> No Information						
New Feature Code	1	ZI027	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> ZI027						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
New Referenced Feature Name	1	No Information	String	Unitless	200	The name of the database feature. [Description] This name is to be usable as a reference into a database.
<u>allowed values:</u> No Information						
New Referenced Feature Number	1	-999999	Integer	Unitless	0	The numeric identifier of a feature within a database. [Description] This numeric identifier is to be usable as a reference into a database.
<u>allowed values:</u> -999999						
New Referenced Feature Unique Identifier	1	No Information	String	Unitless	254	The unique identifier associated with the referenced feature instance.
<u>allowed values:</u> No Information						
New Referenced Field Name	1	No Information	String	Unitless	200	The name of the field within a database table. [Description] This name is to be usable as a reference into a database.
<u>allowed values:</u> No Information						
New Referenced Feature Group Name	1	No Information	String	Unitless	200	The name of the database grouping mechanism that may itself contain features. [Description] This name is to be usable as a reference into a database.
<u>allowed values:</u> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<u>allowed values:</u> No Information

Feature FeatureGAMetadata (Area 00)

New ☐ Feature GEOINT Assurance Metadata

A modeling entity collecting assurance information about the quality of the digital representation of a Geospatial Intelligence (GEOINT) feature and its properties (attributes and associations). [Description] For example, the currency of the information known about a feature or the degree to which the properties of a feature are accurately and/or completely determined.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Currency Date and Time	1	No Information	Constrained_String	Unitless	20	The date and, optionally, time assigned to a data set (for example: the digital representation of a single feature or a set of features) as a whole that provides an overall assessment of its currency. [Description] Often known as the 'as of' date, the overall currency of a data set is affected by knowledge of the source(s) and processes used to define the location, geometry, and other properties (attributes and associations) of the digital representation.
<u>allowed values:</u> No Information						
Data Quality Statement	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records a general assessment of the quality of a resource (for example: a data instance, a data set or a data processing activity). [Description] The quality of a data resource is dependent on the data providers knowledge regarding the lineage of the data and the processes that have been used to transform that data. No restriction is placed on the length of the statement.
<u>allowed values:</u> No Information						
Existence Certainty Category	1	No Information	Enumeration	Unitless		A general evaluation of the quality of a feature assessment, as a category.
<u>allowed values:</u> Definite			Doubtful			No Information Reported
New Feature Code	1	ZI026	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> ZI026						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
New Referenced Feature Name	1	No Information	String	Unitless	200	The name of the database feature. [Description] This name is to be usable as a reference into a database.
<u>allowed values:</u> No Information						
New Referenced Feature Number	1	-999999	Integer	Unitless	0	The numeric identifier of a feature within a database. [Description] This numeric identifier is to be usable as a reference into a database.
<u>allowed values:</u> -999999						
New Referenced Feature Unique Identifier	1	No Information	String	Unitless	254	The unique identifier associated with the referenced feature instance.
<u>allowed values:</u> No Information						
New Referenced Feature Group Name	1	No Information	String	Unitless	200	The name of the database grouping mechanism that may itself contain features. [Description] This name is to be usable as a reference into a database.
<u>allowed values:</u> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<u>allowed values:</u> No Information						
Underwater Delineation Quality	1	No Information	Enumeration	Unitless		The delineation quality of an underwater feature that is derived from overhead imagery (for example; airborne or satellite remote sensing imagery), as a category. [Description] Water column characteristics and other environmental factors (for example: water surface roughness or sun glint) will degrade the accuracy of the delineated extent of features.
<u>allowed values:</u> Average Delineation No Information			Excellent Delineation Poor Delineation			Good Delineation Highly Obscured Delineation
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<u>allowed values:</u> No Information

Feature Fence (Line 00)

New ☐ Fence

A man-made barrier of relatively light structure used as an enclosure or boundary. [Description] Similar structures that are constructed of heavy materials (for example: stone, rock or masonry) are classified as walls.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Barrier Top Type	1	No Information	Enumeration	Unitless	0	The type of structure and/or material mounted on the top of a barrier (for example: a fence or a wall).
<i>allowed values:</i> Barbed Wire No Information			Chain-link Other			Concertina Wire Spiked Electrified Wire
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AL070	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL070						
Fence Type	1	No Information	Enumeration	Unitless	0	The type of a fence based on the type of materials used in its construction.
<i>allowed values:</i> Barbed Wire Metal Wood			Chain-link Netting			Electrified Wire No Information Geotextile Other
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True

New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	allowed values:	Damaged No Information Unmaintained		Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction
	Predominant Feature Height	1	[-999999, -999999]	Real_Interval	Metre		The predominant height (the height of at least 50 percent) of the feature measured from the lowest point of the base at ground or water level (downhill side/downstream side).
	allowed values:	[-999999, -999999]		-999999			
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	allowed values:	U					
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
	allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
	allowed values:	No Information					
	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
	allowed values:	No Information					
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
	allowed values:	No Information					
	Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
	allowed values:	Brick No Information Steel	Concrete Other Stone			Masonry Prestressed Concrete Wood	Metal Reinforced Concrete
	Thickness	1	-999999	REAL	Metre	0	The distance between the two opposite surfaces of an object, usually the distance of smallest measure. [Description] The third dimension of an object, distinct from length and width (breadth).
	allowed values:	-999999					

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Feature FerryCrossing (Line 00)

New ☐ Ferry Crossing

A route where a ferry crosses from one shore to another.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
allowed values: No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AQ070	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: AQ070						
Ferry Crossing Distance	1	-999999	REAL	Metre	0	The length of a route in a body of water where a ferry crosses from one shoreline to another.
allowed values: -999999						
Ferry Crossing Type	1	No Information	Enumeration	Unitless	0	The type of a ferry crossing based on the maneuverability of the vessel.
allowed values: Cable Other			Free-moving			Ice No Information
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values: No Information						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
allowed values: Accurate			Approximate			Doubtful No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Motorized Crossing	1	No Information	Boolean	Unitless	0	An indication that a ferry is propelled across a waterbody by a motor located on either the vessel or the shore.
allowed values: FALSE			No Information			TRUE

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Operating Cycle	1	No Information	Enumeration	Unitless	0	The time(s) during which a feature is usable.
<i>allowed values:</i> Continuously Operating No Information Winter Season			Daytime Other			Never Operating Restricted Night-time Summer Season
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Under Construction			Destroyed Other Unmaintained			Dismantled Ruined Intact Site Preparation
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature FerryCrossing (Point 00)

New ☐ Ferry Crossing

A route where a ferry crosses from one shore to another.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
allowed values:	No Information Partially Operational		Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AQ070	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values:	AQ070					
Ferry Crossing Distance	1	-999999	REAL	Metre	0	The length of a route in a body of water where a ferry crosses from one shoreline to another.
allowed values:	-999999					
Ferry Crossing Type	1	No Information	Enumeration	Unitless	0	The type of a ferry crossing based on the maneuverability of the vessel.
allowed values:	Cable Other		Free-moving			Ice No Information
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values:	No Information					
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
allowed values:	Accurate		Approximate			Doubtful No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values:	-999999					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values:	No Information					

Motorized Crossing	1	No Information	Boolean	Unitless	0	An indication that a ferry is propelled across a waterbody by a motor located on either the vessel or the shore.				
<i>allowed values:</i> FALSE			No Information		TRUE					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.				
<i>allowed values:</i> No Information										
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. Feature FerryStation (Area 00)

New ☐ Ferry Station

A location where a ferry takes on or discharges its load.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Attached Building	1	No Information	Boolean	Unitless	0	An indication that a building is physically contiguous (for example: shares a common wall) with one or more adjacent buildings.
<i>allowed values:</i> FALSE			No Information			TRUE
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AQ080	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AQ080						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Emergency Operations No Information Railway Transport			Inland Waters Transport Other Road Transport			Inspection Pedestrian Transport Stop Meeting Place Postal Activities Water Transport
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

New	Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The type of designated hazard protection shelter based on the kind of emergency. [Description] These shelters may be inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
	<i>allowed values:</i> Bomb Shelter Storm Shelter			Fallout Shelter			No Information Other
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999						
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999						
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
New	Multi-unit Building	1	No Information	Boolean	Unitless	0	An indication that a building is divided into two or more distinct sets of rooms or other interior spaces that are internally fully-connected while being separated from each other and common areas by controlled access point(s) (for example: lockable doors) that enable physical privacy and security for its occupants.
	<i>allowed values:</i> FALSE			No Information			TRUE
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False			No Information			True
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.

The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
allowed values:	No Information					

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Emergency Operations No Information Railway Transport			Inland Waters Transport Other Road Transport			Inspection Pedestrian Transport Stop Meeting Place Postal Activities Water Transport
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The type of designated hazard protection shelter based on the kind of emergency. [Description] These shelters may be inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
<i>allowed values:</i> Bomb Shelter Storm Shelter			Fallout Shelter			No Information Other

Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
New Multi-unit Building	1	No Information	Boolean	Unitless	0	An indication that a building is divided into two or more distinct sets of rooms or other interior spaces that are internally fully-connected while being separated from each other and common areas by controlled access point(s) (for example: lockable doors) that enable physical privacy and security for its occupants.
<i>allowed values:</i> FALSE		No Information			TRUE	
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False		No Information			True	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
allowed values:	Conical Flat with Parapet Pitched with Clerestory With Clerestory With Steeple		Domed No Information Pyramidal With Cupola With Tower		Flat Other Sawtoothed With Minaret With Turret	Flat with Clerestory Pitched Semi-cylindrical With Smokestack
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
allowed values:	No Information Road		Other			Pedestrian Railway
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
allowed values:	No Information					

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature FireHydrant (Point 00)

New ☐ Fire Hydrant

An apparatus for drawing water directly from a main, especially alongside a street or road, consisting of a pipe with one or more nozzles or spouts, to which a hose of a fire-engine may be attached.

	Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
New	Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
	allowed values: -999999						
New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	allowed values: -999999						
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	allowed values: -999999						
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN ⁻ . These are powerful poisons that are toxic to humans and aquatic life.
	allowed values: -999999						
	Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.

	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	allowed values: No Information						
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.

<u>allowed values:</u> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
New Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False No Information True						
New Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<u>allowed values:</u> -999999

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Military Service Branch	1	No Information	Enumeration	Unitless	0	The branch of the armed forces of a nation. [Description] May also be applied to similar organizations following military discipline (for example: a coastguard).
<i>allowed values:</i> Air Force Coastguard No Information			Air National Guard Joint Not Applicable			Army Marines Other Army National Guard Navy
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Permanent	1	No Information	Boolean	Unitless	0	An indication that a feature is permanent. [Description] Temporary features last, or are meant to last, for a limited time only.
<i>allowed values:</i> FALSE			No Information			TRUE
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
allowed values:	Boulders No Information Rock		Brick Other Soil		Concrete Prestressed Concrete Wood	Masonry Reinforced Concrete
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Weapons Range Type	3	No Information	Enumeration	Unitless	0	The type of a weapons range based on its intended use(s).
allowed values:	Demolition Area No Information		Field Artillery Other		Grenade Small Arms	Impact Area Tank
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
allowed values:	-999999

Feature FiringRange (Point 00)New ☐ Firing Range

A site designated for the purpose of discharging firearms or detonating munitions.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	FA015	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> FA015						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Defence Activities Recreation			Law Enforcement			No Information Other
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<i>allowed values:</i> -999999							
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i> No Information							
Military Service Branch	1	No Information	Enumeration	Unitless	0	The branch of the armed forces of a nation. [Description] May also be applied to similar organizations following military discipline (for example: a coastguard).	
<i>allowed values:</i> Air Force Coastguard No Information			Air National Guard Joint Not Applicable		Army Marines Other		Army National Guard Navy
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i> No Information

Feature FishFarmFacility (Area 00)New ☐ Fish Farm Facility

A facility involved in the breeding (hatching and associated activities) and cultivation (raising for release or harvesting) of fish in tanks or landlocked enclosures. [Description]
Fish species raised on fish farms include, for example, salmon, catfish, tilapia, cod, carp, and trout.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						

New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<u>allowed values:</u> -999999						
	Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
	<u>allowed values:</u> No Information Partially Operational			Non-operational Planned		Not in Operation Temporarily Non-operational	Operational
New	Feature Code	1	BH051	CONSTRAINED_ STRING	Unitless	5	Feature Code
	<u>allowed values:</u> BH051						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
	Hydrologic Persistence	1	No Information	Enumeration	Unitless		The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<u>allowed values:</u> Dry Perennial			Ephemeral		Intermittent	No Information
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<u>allowed values:</u> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information		True	
New	Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<u>allowed values:</u> -999999						
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.

<i>allowed values:</i> <i>Damaged</i> No Information <i>Unmaintained</i>			<i>Destroyed</i> <i>Ruined</i>			<i>Dismantled</i> <i>Site Preparation</i>	<i>Intact</i> <i>Under Construction</i>
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.	
<i>allowed values:</i> Bivalve Mollusc Mussels			Crustacean No Information			Cultivated Shellfish Other	Fish Oysters
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
<i>allowed values:</i> <i>U</i>							
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.	
<i>allowed values:</i> No Information							
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.	
<i>allowed values:</i> No Information							
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.	
<i>allowed values:</i> No Information							
New Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.	
<i>allowed values:</i> -999999							
New Water Resource Information : Temperature	1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.	
<i>allowed values:</i> -999999							
New Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.	
<i>allowed values:</i> -999999							

New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<u>allowed values:</u> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless 254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<u>allowed values:</u> No Information						
	Volume	1	-999999	REAL	Cubic Metre	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<u>allowed values:</u> -999999						
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	The electrical conductivity of water.
<u>allowed values:</u> -999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
<u>allowed values:</u> -999999						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	The potability of water based on the type of treatment required before it is safe for human consumption.
<u>allowed values:</u> Contaminated Potable No Information Treatable Nonpotable Other						
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	The type of available water based on its composition.
<u>allowed values:</u> Alkaline Mineral Saline Brackish No Information Seawater Brine Not Applicable Fresh Other						
New	Water Resource Information : Water Use	1	No Information	Enumeration	Unitless	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
<u>allowed values:</u> Agricultural Irrigation Institutional Other Commercial Livestock Power Generation Domestic Irrigation Municipal Recreational Industrial No Information Sanitary Domestic						
	Width	1	-999999	REAL	Metre 0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature FishFarmFacility (Point 00)

New ☐ Fish Farm Facility

A facility involved in the breeding (hatching and associated activities) and cultivation (raising for release or harvesting) of fish in tanks or landlocked enclosures. [Description]
Fish species raised on fish farms include, for example, salmon, catfish, tilapia, cod, carp, and trout.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999						
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	BH051	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BH051						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Hydrologic Persistence	1	No Information	Enumeration	Unitless		The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry Perennial			<i>Ephemeral</i>			Intermittent No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
New Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.			
<i>allowed values:</i> No Information									
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.			
<i>allowed values:</i> FalseNo InformationTrue									
New Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.			
<i>allowed values:</i> -999999									
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.			
<i>allowed values:</i> DamagedNo InformationUnmaintainedDestroyedRuinedDismantledSite PreparationIntactUnder Construction									
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.			
<i>allowed values:</i> Bivalve Mollusc MusselsCrustaceanNo InformationCultivated ShellfishOtherFish Oysters									
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.			
<i>allowed values:</i> U									
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.			
<i>allowed values:</i> No Information									
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.			
<i>allowed values:</i> No Information									

	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
	<i>allowed values:</i> No Information						
New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units		The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<i>allowed values:</i> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<i>allowed values:</i> No Information						
	Volume	1	-999999	REAL	Cubic Metre		The volume of a feature. [Description] For example, the storage capacity of a water tower.

allowed values: Covered < 20 metres Covered >= 20 metres but < 30 metres Covered >= 30 metres <i>No Information</i>						

Hydrographic Vertical Positioning Information : Elevation Above Waterbody Floor	1	-999999	REAL	Metre	0	The elevation of an object measured vertically from the waterbody floor to the base (lowest point) of the object.
<u>allowed values:</u> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<u>allowed values:</u> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BB100	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> BB100						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999						
Hydrographic Vertical Positioning Information : Height Above Waterbody Floor	1	-999999	REAL	Metre	0	The height of an object measured vertically from the waterbody floor to the top (highest point) of the object.
<u>allowed values:</u> -999999						
Hydrographic Vertical Positioning Information : Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<u>allowed values:</u> -999999						
Hydrographic Base Height	1	-999999	REAL	Metre	0	The height from a specified sounding datum to the bottom or base of a feature (for example: the base of a lighthouse).
<u>allowed values:</u> -999999						
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999	REAL	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<u>allowed values:</u> -999999						
Hydrographic Vertical Positioning Information : Hydrographic Drying Height	1	-999999	REAL	Metre	0	The height of the feature, which tidal waters cover and uncover, referenced to a specified sounding datum.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Hydrographic Vertical Positioning Information : Maritime Navigation Marked	1	No Information	Boolean	Unitless	0	An indication that a feature is significant to maritime safety of navigation and is marked (for example: by a light or beacon) by a maritime-specific navigational aid. [Description] Mariners may also use other prominent features (for example: rotating aeronautical beacons or lighted structures) for informal navigational purposes.
<u>allowed values:</u> FALSE			No Information			TRUE
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information

Hydrographic Vertical Positioning Information : Sounding Metadata : Sounding Datum Name	1	No Information	String	Unitless	80	The name of the tidal datum to which soundings and drying heights are referenced. [Description] Used when the sounding datum is known but not specified using Attribute: 'Sounding Datum'.
allowed values:	No Information					
allowed values:	No Information					
Hydrographic Base Height : Sounding Metadata : Sounding Velocity Correction Method	1	No Information	Enumeration	Unitless	0	The method of correction that has been used to correct a sounding velocity instrument reading to obtain the correct depth.
allowed values:	Mathews Tables Sound Velocity Meter	No Information Sunder 1500 Calibrated				Other Sunder Other Calibrated
allowed values:	Mathews Tables Sound Velocity Meter	No Information Sunder 1500 Calibrated				Other Sunder Other Calibrated
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
allowed values:	Metal Wood	No Information				Other Plastic
Hydrographic Vertical Positioning Information : Uncovering Height Known	1	No Information	Boolean	Unitless	0	An indication that information is known about the height to which a marine feature may be uncovered by the tide.
allowed values:	FALSE	No Information				TRUE
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					

Hydrographic Vertical Positioning Information : Sounding Metadata : Vessel Draft Correction	1	No Information	Boolean	Unitless	0	An indication that a vessel draft correction has been applied.
<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
Water Level Effect	1	No Information	Enumeration	Unitless	0	The relationship between the feature and surrounding (including covering and/or underlying) water.
<i>allowed values:</i> Always Submerged Other			Awash at Chart Datum			Covers and Uncovers No Information
<i>allowed values:</i> Always Dry Covers and Uncovers			Always Submerged No Information			Awash at Chart Datum Awash at Low Water Partly Submerged
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature FishLadder (Line 00)

New ☐ Fish Ladder

A series of ascending pools constructed to enable fish to swim upstream over (or around) a dam.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information <i>Partially Operational</i>			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	BI060	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BI060						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.

<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.

Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AL073	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL073						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.

<i>allowed values:</i> -999999						
Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

allowed values: No Information

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
----------------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
--------------------------	---	----------------	-------------	----------	---	---

<i>allowed values:</i> Brick			Concrete			Masonry
No Information			Other			Reinforced Concrete
Rock			Soil			Treated Timber
Wood						

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Waterbody Depth	1	-999999	REAL	Metre	0	The distance, measured vertically upward, from the bottom of an inland waterbody to a reference level datum.
allowed values:	-999999					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

	<i>allowed values:</i>	BH070					
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i>	No Information					
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i>	-999999					
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i>	No Information					
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i>	No Information					
New	Physical Condition	1	No Information	Enumeration	Unitless	The physical state of a structure, or site, as a whole.	
	<i>allowed values:</i>	Damaged No Information Unmaintained		Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction
	Predominant Average Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second	The average water velocity, exclusive of high water due to runoff or low water due to drought.	
	<i>allowed values:</i>	[-999999, -999999]					
	Predominant Maximum Water Depth	1	[-999999, -999999]	Real_Interval	Metre	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.	
	<i>allowed values:</i>	[-999999, -999999]					
	Predominant Maximum Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second	The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.	
	<i>allowed values:</i>	[-999999, -999999]					
	Predominant Minimum Water Depth	1	[-999999, -999999]	Real_Interval	Metre	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.	
	<i>allowed values:</i>	[-999999, -999999]					
	Predominant Minimum Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second	The average minimum (seasonal low water) water velocity, exclusive of high water due to runoff or low water due to drought.	
	<i>allowed values:</i>	[-999999, -999999]					
	Predominant Water Depth	1	[-999999, -999999]	Real_Interval	Metre	The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.	
	<i>allowed values:</i>	[-999999, -999999]					
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<i>allowed values:</i>	U					

Process Step Information : Resource Content Originator		1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

<i>allowed values:</i> No Information							
Maritime Bottom Characteristic (Second Sediment Colour)		1	No Information	Enumeration	Unitless	0	The general colour of a waterbody sediment based on the Geological Society of America (GSA) rock colour chart and the Munsell colour system. [Description] The Munsell system is based on a colour solid, or approximately a colour sphere, which has a neutral gray central axis grading from white at the top to black at the bottom. This property of lightness is called value. Around the circumference or equator of the solid are the ten major hues, each of which is divided into ten numbered divisions, so that 5 marks the middle of the hue, and 10 marks the boundary between one hue and the next. Thus, any particular hue can be designated by a number and a letter such as 5R or 10YR. Any single vertical section through the neutral gray axis and a particular hue constitutes a colour chart on which the colors grade in value from light at the top to dark at the bottom, and in chroma (degree of saturation) from gray at one edge to the most vivid colors out at the margin. Both value and chroma are numbered so any particular colour can be given a numerical designation representing hue, value, and chroma such as 5R 6/4 and 10YR 8/2. Colour names are based on the Inter-Society Color Council-National Bureau of Standards system of names.

Feature Forest (Area 00)New ☐ Forest

A tract of land primarily covered by trees and undergrowth. [Description] The area is sometimes mixed with pasture.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Canopy Cover	1	-999999	REAL	Percent	0	The fraction of canopy cover within a defined area during the season of maximum foliage. [Description] The canopy is formed by the upper branches of the trees in a forest forming a more or less continuous layer.
<i>allowed values:</i> -999999						
Delineation Known	1	No Information	Boolean	Unitless	0	An indication that the delineation (for example: limits and information) of a feature is known.
<i>allowed values:</i> FALSE			No Information			TRUE
New Feature Code	1	EC015	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> EC015						
Foliage Type	1	No Information	Enumeration	Unitless	0	The predominant foliage type of the vegetation.
<i>allowed values:</i> Deciduous Other			Evergreen			Mixed No Information
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Isolated	1	No Information	Boolean	Unitless	0	An indication that a feature (for example: a structure) is in the open by itself, isolated from other features of a similar type, and thus is visually distinct from surrounding features when viewed from a distance.
<i>allowed values:</i> FALSE			No Information			TRUE
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values: False			No Information		True	
Predominant Vegetation Height	1	-999999	REAL	Metre	0	The predominant height (the height of at least 50 percent) of the vegetation.
allowed values: -999999						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Shelter Belt	1	No Information	Boolean	Unitless	0	An indication that a feature (for example: a linear stand of trees) functions as a shelter belt, protecting other features (for example: roads, railways, cropland, and/or structures) from the effects of adverse weather.
allowed values: False			No Information		True	
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						

Stem Diameter	1	[-999999, -999999]	REAL_Interval	Metre	0	The average diameter of the tree trunks in an area, measured at a height of approximately 1.5 metres or 4.5 feet on the high side (if on a hillside) above the surface of the ground. [Description] Commonly referred to as the 'diameter at breast height' (dbh). For trees up to 2 metres high, the stem diameter is measured at the mid-point between the ground and the stem tip.
<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval						
		Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval		Greater-than Semi-interval Less-than Semi-interval
Tree Spacing	1	[-999999, -999999]	REAL_Interval	Metre	0	The average tree spacing between trees in a stand, determined from centre to centre of adjacent trees.
<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval						
		Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval		Greater-than Semi-interval Less-than Semi-interval
Undergrowth Density	1	[-999999, -999999]	REAL_Interval	Percent	0	The fraction of land within a defined area that is covered by undergrowth (for example: scrub, brush, and/or bush).
<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval						
		Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval		Greater-than Semi-interval Less-than Semi-interval
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Vegetation Species	3	No Information	Enumeration	Unitless	0	The predominant species of a tract of vegetation.
<i>allowed values:</i> Casuarina Filao						
		Conifer No Information		Cypress Other		Eucalyptus Palm
Vegetation Trafficability Impact	1	[-999999, -999999]	Real_Interval	Percent		The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
<i>allowed values:</i> [-999999, -999999]						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature Forest (Line 00)New ☐ Forest**A tract of land primarily covered by trees and undergrowth. [Description] The area is sometimes mixed with pasture.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						

Canopy Cover	1	-999999	REAL	Percent	0	The fraction of canopy cover within a defined area during the season of maximum foliage. [Description] The canopy is formed by the upper branches of the trees in a forest forming a more or less continuous layer.
<u>allowed values:</u>	-999999					
Delineation Known	1	No Information	Boolean	Unitless	0	An indication that the delineation (for example: limits and information) of a feature is known.
<u>allowed values:</u>	FALSE		No Information		TRUE	
New Feature Code	1	EC015	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u>	EC015					
Foliage Type	1	No Information	Enumeration	Unitless	0	The predominant foliage type of the vegetation.
<u>allowed values:</u>	Deciduous Other		Evergreen		Mixed No Information	
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u>	No Information					
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u>	-999999					
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u>	-999999					
Isolated	1	No Information	Boolean	Unitless	0	An indication that a feature (for example: a structure) is in the open by itself, isolated from other features of a similar type, and thus is visually distinct from surrounding features when viewed from a distance.
<u>allowed values:</u>	FALSE		No Information		TRUE	
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u>	-999999					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u>	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u>	No Information					
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

New Fence Exists 1 No Information Boolean Unitless 0 Existence of Fence

allowed values: FALSE

No Information

TRUE

	Floor Count	1	-999999	REAL	Unitless	0	The number of floors in a structure (for example: a building).
	<u>allowed values:</u>	-999999					
	Fortified Building Type	1	No Information	Enumeration	Unitless	0	The type of a building that is fortified or reinforced to provide for defense from armed attack.
	<u>allowed values:</u>	Blockhouse No Information		Casement Non-specific Fortified		Keep Other	Martello Tower Pillbox
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u>	No Information					
New	Gate Exists	1	No Information	Boolean	Unitless	0	Existence of Gate
	<u>allowed values:</u>	FALSE		No Information		TRUE	
New	Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The type of designated hazard protection shelter based on the kind of emergency. [Description] These shelters may be inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
	<u>allowed values:</u>	Bomb Shelter Storm Shelter		Fallout Shelter		No Information	Other
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u>	-999999					
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u>	-999999					
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u>	-999999					
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u>	No Information					
	Military Service Branch	1	No Information	Enumeration	Unitless	0	The branch of the armed forces of a nation. [Description] May also be applied to similar organizations following military discipline (for example: a coastguard).
	<u>allowed values:</u>	Air Force Marines		Army Navy		Coastguard No Information	Joint Other
New	Multi-unit Building	1	No Information	Boolean	Unitless	0	An indication that a building is divided into two or more distinct sets of rooms or other interior spaces that are internally fully-connected while being separated from each other and common areas by controlled access point(s) (for example: lockable doors) that enable physical privacy and security for its occupants.
	<u>allowed values:</u>	FALSE		No Information		TRUE	
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u>	No Information					
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u>	False		No Information		True	
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.

<i>allowed values:</i>	<i>Damaged</i> No Information <i>Unmaintained</i>		<i>Destroyed</i> <i>Ruined</i>		<i>Dismantled</i> <i>Site Preparation</i>	<i>Intact</i> <i>Under Construction</i>
Manufacturing Information : Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i>	Aircraft Biochemical Chemical Coke Cotton Electronic Equipment Fluorine Gas Ice Liquefied Natural Gas (LNG) Metal Munitions Nuclear Fuel Petrochemical Petroleum Lubricant Radioactive Material Sewage Sugar Vegetation Product Zinc		Aluminum Biodiesel Clothing Concrete Desalinated Water Explosive Food Glass Iron Liquefied Petroleum Gas (LPG) Milk <i>No Information</i> Olive Oil Petrol Phosphorus Rice Silver Textile Water		Ammunition Brick Coal Consumer Goods Electric Power Fertilizer Frozen Water Gold Lead Lumber Milled Grain No Product <i>Other</i> Petroleum Plastic Rubber Snow Tobacco Whale Products	Asphalt Cement Coffee Copper Electrical Equipment Fish Fruit Heating Steam and/or Water Lime Manganese Motor Vehicle Non-solid Hydrocarbon Fuel Paper Petroleum and/or Natural Gas Prestressed Concrete Salt Steel Uranium Wine
Manufacturing Information : Raw Material	3	No Information	Enumeration	Unitless	0	The principal 'raw', or input, material(s) involved in a production activity. [Description] If multiple 'raw' materials are specified then they are usually listed in descending order of importance.
<i>allowed values:</i>	Aluminum Chemical Copper Gold Lumber No Raw Material Paper Radioactive Material Snow Tobacco Wood		Asphalt Clay Cotton Ice Manganese Oil Petroleum and/or Natural Gas Rubber Steel Uranium Zinc		Bauxite Coal Gas Iron Metal Ore Plant Material Sewage Sugar Vegetation	Cement Coke Glass Lead <i>No Information</i> <i>Other</i> Plastic Silver Textile Water
Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).
<i>allowed values:</i>	Depressed Raised		Level		<i>No Information</i>	<i>Not Applicable</i>
New Residence Configuration Type	1	No Information	Enumeration	Unitless	0	Configuration of a residence in regards to its structure or form.
<i>allowed values:</i>	<i>Apartment House</i> No Information		<i>Attached House</i> <i>Other</i>		<i>Detached House</i>	<i>Manufactured House</i>
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i>	<i>U</i>					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
allowed values:	Conical Flat with Parapet Pitched with Clerestory With Clerestory With Steeple		Domed No Information Pyramidal With Cupola With Tower		Flat Other Sawtoothed With Minaret With Turret	Flat with Clerestory Pitched Semi-cylindrical With Smokestack
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
allowed values:	Adobe Brick Fibreglass Metal Plant Material Steel		Aluminum Glass Mud-based Construction Prestressed Concrete Stone		Brick Iron No Information Reinforced Concrete Treated Timber	Concrete Masonry Other Sod Wood
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
allowed values:	No Information					

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

	<u>allowed values:</u>	-999999					
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u>	-999999					
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u>	-999999					
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u>	No Information					
	Military Service Branch	1	No Information	Enumeration	Unitless	0	The branch of the armed forces of a nation. [Description] May also be applied to similar organizations following military discipline (for example: a coastguard).
	<u>allowed values:</u>	Air Force Marines		Army Navy		Coastguard No Information	Joint Other
New	Multi-unit Building	1	No Information	Boolean	Unitless	0	An indication that a building is divided into two or more distinct sets of rooms or other interior spaces that are internally fully-connected while being separated from each other and common areas by controlled access point(s) (for example: lockable doors) that enable physical privacy and security for its occupants.
	<u>allowed values:</u>	FALSE		No Information		TRUE	
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u>	No Information					
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u>	False		No Information		True	
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.

<i>allowed values:</i>	<i>Damaged</i> No Information <i>Unmaintained</i>		<i>Destroyed</i> <i>Ruined</i>		<i>Dismantled</i> <i>Site Preparation</i>	<i>Intact</i> <i>Under Construction</i>
Manufacturing Information : Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i>	Aircraft Biochemical Chemical Coke Cotton Electronic Equipment Fluorine Gas Ice Liquefied Natural Gas (LNG) Metal Munitions Nuclear Fuel Petrochemical Petroleum Lubricant Radioactive Material Sewage Sugar Vegetation Product Zinc		Aluminum Biodiesel Clothing Concrete Desalinated Water Explosive Food Glass Iron Liquefied Petroleum Gas (LPG) Milk <i>No Information</i> Olive Oil Petrol Phosphorus Rice Silver Textile Water		Ammunition Brick Coal Consumer Goods Electric Power Fertilizer Frozen Water Gold Lead Lumber Milled Grain No Product <i>Other</i> Petroleum Plastic Rubber Snow Tobacco Whale Products	Asphalt Cement Coffee Copper Electrical Equipment Fish Fruit Heating Steam and/or Water Lime Manganese Motor Vehicle Non-solid Hydrocarbon Fuel Paper Petroleum and/or Natural Gas Prestressed Concrete Salt Steel Uranium Wine
Manufacturing Information : Raw Material	3	No Information	Enumeration	Unitless	0	The principal 'raw', or input, material(s) involved in a production activity. [Description] If multiple 'raw' materials are specified then they are usually listed in descending order of importance.
<i>allowed values:</i>	Aluminum Chemical Copper Gold Lumber No Raw Material Paper Radioactive Material Snow Tobacco Wood		Asphalt Clay Cotton Ice Manganese Oil Petroleum and/or Natural Gas Rubber Steel Uranium Zinc		Bauxite Coal Gas Iron Metal Ore Plant Material Sewage Sugar Vegetation	Cement Coke Glass Lead <i>No Information</i> <i>Other</i> Plastic Silver Textile Water
Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).
<i>allowed values:</i>	Depressed Raised		Level		<i>No Information</i>	<i>Not Applicable</i>
New Residence Configuration Type	1	No Information	Enumeration	Unitless	0	Configuration of a residence in regards to its structure or form.
<i>allowed values:</i>	<i>Apartment House</i> No Information		<i>Attached House</i> <i>Other</i>		<i>Detached House</i>	<i>Manufactured House</i>
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i>	<i>U</i>					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
allowed values:	Conical Flat with Parapet Pitched with Clerestory With Clerestory With Steeple		Domed No Information Pyramidal With Cupola With Tower		Flat Other Sawtoothed With Minaret With Turret	Flat with Clerestory Pitched Semi-cylindrical With Smokestack
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
allowed values:	Adobe Brick Fibreglass Metal Plant Material Steel		Aluminum Glass Mud-based Construction Prestressed Concrete Stone		Brick Iron No Information Reinforced Concrete Treated Timber	Concrete Masonry Other Sod Wood
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
allowed values:	No Information					

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
allowed values: -999999						
New Window Type	1	No Information	Enumeration	Unitless		Type of Window
allowed values: No Information Plastic with Bars						Open with Bars Plastic without Bars Open without Bars Other
New Windows Per Story	1	-999999	Integer	Unitless		Number of windows per story
allowed values: -999999						
Wireless Telecommunication Information : Wireless Telecommunication Type	1	No Information	Enumeration	Unitless	0	The type of a wireless telecommunication service based on the mechanism(s) of transmission and/or the nature of the communication(s) supported. [Description] For example, radio broadcast or mobile phone service.
allowed values: Cellular Phone Other Television (TV)						Microwave Radio Relay Radio Broadcast Mobile Phone Radio Telephone No Information Radio-telegraph

Feature FoulGround (Area 00)

New ☐ Foul Ground

A region over which it is safe to navigate but which should be avoided for anchoring, intentional grounding, or ground fishing.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aggregation	1	No Information	Boolean	Unitless	0	An indication that a feature instance is, or may be, representing a set of interrelated feature instances as an aggregate. [Description] May be used when delineating interrelated features within a region that may or may not meet inclusion conditions to be delineated individually. For example, an aerodrome consists of numerous component feature instances such as runways, taxiways, NAVAIDs, and aircraft hangars, but may be collected as a single aggregate feature instance at a small scale.
allowed values: False						No Information True
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
Hydrographic Vertical Positioning Information : Sounding Metadata : Bathymetric Measurement Quality Category	3	No Information	Enumeration	Unitless	0	A general evaluation of the qualities of a bathymetric measurement, as a category. [Description] Drying heights are typically captured using negative (bathymetric) sounding values; their certainty of measurement may be categorized in the same manner as positive values.
allowed values: Depth Doubtful Least Depth Not Applicable Unconfirmed Depth						Depth Known Maintained Depth Other Unmaintained Depth Depth Unknown No Bottom Reported Depth Depth Unreliable No Information Safe Clearance Known
Hydrographic Vertical Positioning Information : Bathymetric Measurement Technique	3	No Information	Enumeration	Unitless	0	The technique used to determine water depth(s).

<i>allowed values:</i>	Area Swept by Side-scan Sonar		Area Swept by Vertical Acoustic System		Area Swept by Wire-drag	Bathymetric LiDAR
	Computer Generated		Depth Known by Other Than Wire Drag		Diver	Echo Sounder
	Electromagnetic Sensor		Lead-line		Levelling	Multi-beam Echo Sounder
	No Information		Other		Photogrammetry	Satellite Imagery
	Side-scan Sonar		Singlebeam		Underwater Utility Vehicle	
Component Feature Count	1	-999999	Integer	Unitless	0	The number of interrelated component features (of various types) of the feature. [Description] May be used to indicate the number of component feature instances that have been collected for the feature. For example, the total number of runways, taxiways, NAVAIDs, and aircraft hangars that compose an aerodrome.
<i>allowed values:</i> -999999						
Dangerous to Navigation	1	No Information	Boolean	Unitless	0	An indication that a hazard in a waterbody is considered to be dangerous to surface navigation. [Description] For example, broken piles, a rock formation, or a reef in moderately deep waters. For large vessels a depth of less than 20 metres is generally considered to be dangerous.
<i>allowed values:</i> False			No Information	True		
Delineation Known	1	No Information	Boolean	Unitless	0	An indication that the delineation (for example: limits and information) of a feature is known.
<i>allowed values:</i> FALSE			No Information	TRUE		
Hydrographic Vertical Positioning Information : Depth Exposition	1	No Information	Enumeration	Unitless	0	Indicates specific depths governed by IHO regulations used in indicating safe navigation, as categories.
<i>allowed values:</i> Covered < 20 metres			Covered >= 20 metres but < 30 metres	Covered >= 30 metres		
Hydrographic Vertical Positioning Information : Elevation Above Waterbody Floor	1	-999999	REAL	Metre	0	The elevation of an object measured vertically from the waterbody floor to the base (lowest point) of the object.
<i>allowed values:</i> -999999						
New Feature Code	1	BD050	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BD050						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Hydrographic Vertical Positioning Information : Height Above Waterbody Floor	1	-999999	REAL	Metre	0	The height of an object measured vertically from the waterbody floor to the top (highest point) of the object.
<i>allowed values:</i> -999999						
Hydrographic Vertical Positioning Information : Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999						
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999						
Hydrographic Vertical Positioning Information : Hydrographic Drying Height	1	-999999	REAL	Metre	0	The height of the feature, which tidal waters cover and uncover, referenced to a specified sounding datum.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						

Hydrographic Vertical Positioning Information : Maritime Navigation Marked	1	No Information	Boolean	Unitless	0	An indication that a feature is significant to maritime safety of navigation and is marked (for example: by a light or beacon) by a maritime-specific navigational aid. [Description] Mariners may also use other prominent features (for example: rotating aeronautical beacons or lighted structures) for informal navigational purposes.
allowed values: FALSE			No Information			TRUE
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Non-submarine Contact Reporting Agency Type	1	No Information	Enumeration	Unitless	0	General classification of the source of a reported non-submarine contact. [Description] Based on specific fields in the US and UK Wreck Lists.
allowed values: Action Report Coast Guard Records No Information Photograph Report Survey US Naval Headquarters/Commands Report			Casualty Report Hydrographic/Admiralty Office North Sea Fishing Charts Position Accurate Field Check Survivor Report Wreck List			Chart MAD Report Notice to Mariners Salvage Report Undifferentiated Sonar or MAD Report Chart Records Minesweeper Other Sonar Report US Coast & Geodetic Survey/National Ocean Service Report
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values: Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)			Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)			Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM) Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						

Hydrographic Vertical Positioning Information : Sonar-confirmed	1	No Information	Boolean	Unitless	0	An indication that a contact or other object has been confirmed by sonar.
<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
Hydrographic Vertical Positioning Information : Sounding Metadata : Sounding Datum	1	No Information	Enumeration	Unitless	0	The tidal datum to which soundings and drying heights are referenced. [Description] It is usually taken to correspond to a low water stage of the tide.
<i>allowed values:</i>			Approximate Lowest Astronomical Tide Approximate Mean Sea Level High Water Highest Astronomical Tide International Great Lakes Datum 1985 Lower Low Water Lowest Low Water Springs Mean Higher High Water Mean Low Water Springs Mean Tide Level Nearly Lowest Low Water <i>Slant</i>	Approximate Mean Low Water Chart Datum (Unspecified) High Water Springs Highest High Water Local Datum Lower Low Water Large Tide Mean High Water Mean Higher High Water Springs Mean Lower Low Water Mean Water Level No Information Spring Tide	Approximate Mean Low Water Springs <i>Drying Heights</i> Higher High Water Indian Spring High Water Low Water Lowest Astronomical Tide Mean High Water Neaps Mean Low Water Mean Lower Low Water Springs Neap Tide <i>Ordinary</i>	Approximate Mean Lower Low Water Equinoctial Spring Low Water Higher High Water Large Tide Indian Spring Low Water Low Water Springs Lowest Low Water Mean High Water Springs Mean Low Water Neaps Mean Sea Level Nearly Highest High Water <i>Other</i>
Hydrographic Vertical Positioning Information : Sounding Metadata : Sounding Datum Name	1	No Information	String	Unitless	80	The name of the tidal datum to which soundings and drying heights are referenced. [Description] Used when the sounding datum is known but not specified using Attribute: 'Sounding Datum'.
<i>allowed values:</i> No Information						
Hydrographic Vertical Positioning Information : Sounding Metadata : Sounding Velocity Correction Method	1	No Information	Enumeration	Unitless	0	The method of correction that has been used to correct a sounding velocity instrument reading to obtain the correct depth.
<i>allowed values:</i>			Mathews Tables Sound Velocity Meter	No Information Sounder 1500 Calibrated	Not Applicable Sounder 4800 Calibrated	Other Sounder Other Calibrated
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i>			Ash Chalk Cobbles Diatomaceous Earth Gravel Madrepore Mud <i>Other</i> Pumice Sand Shell Spicules Volcanic Ash	Bedrock Cinders Conglomerate Foraminifera Ground Shell Manganese Mussels Oysters Quartz Schist Shingle Sponge	Boulders Cirripedia Coral Frozen Water Lava Marl <i>No Information</i> Pebbles Radiolaria Scoria Silt Stone	Calcareous Clay Coral Head Fucus Loess Matte Ooze Plant Material Rock Sea Moss Soil Tufa
Submarine-like Object	1	No Information	Boolean	Unitless	0	An indication that an object on the sea floor (for example: a wreck) could be mistakenly identified as an operable submarine when detected (for example: using acoustic or magnetic sensors).
<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
Hydrographic Vertical Positioning Information : Uncovering Height Known	1	No Information	Boolean	Unitless	0	An indication that information is known about the height to which a marine feature may be uncovered by the tide.
<i>allowed values:</i> <i>FALSE</i>			No Information			<i>TRUE</i>

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Safe Clearance Known

Hydrographic Vertical Positioning Information : Bathymetric Measurement Technique	3	No Information	Enumeration	Unitless	0	The technique used to determine water depth(s).
---	---	----------------	-------------	----------	---	---

<i>allowed values:</i> Area Swept by Side-scan Sonar Computer Generated Electromagnetic Sensor No Information Side-scan Sonar		Area Swept by Vertical Acoustic System <i>Depth Known by Other Than Wire Drag</i> Lead-line Other Singlebeam		Area Swept by Wire-drag Diver Levelling Photogrammetry Underwater Utility Vehicle		Bathymetric LiDAR Echo Sounder Multi-beam Echo Sounder Satellite Imagery
Component Feature Count	1	-999999	Integer	Unitless	0	The number of interrelated component features (of various types) of the feature. [Description] May be used to indicate the number of component feature instances that have been collected for the feature. For example, the total number of runways, taxiways, NAVAIDS, and aircraft hangars that compose an aerodrome.
<i>allowed values:</i> -999999						
Dangerous to Navigation	1	No Information	Boolean	Unitless	0	An indication that a hazard in a waterbody is considered to be dangerous to surface navigation. [Description] For example, broken piles, a rock formation, or a reef in moderately deep waters. For large vessels a depth of less than 20 metres is generally considered to be dangerous.
<i>allowed values:</i> False		No Information		True		
Delineation Known	1	No Information	Boolean	Unitless	0	An indication that the delineation (for example: limits and information) of a feature is known.
<i>allowed values:</i> FALSE		No Information		TRUE		
Hydrographic Vertical Positioning Information : Depth Exposition	1	No Information	Enumeration	Unitless	0	Indicates specific depths governed by IHO regulations used in indicating safe navigation, as categories.
<i>allowed values:</i> Covered < 20 metres		Covered >= 20 metres but < 30 metres		Covered >= 30 metres		No Information
Hydrographic Vertical Positioning Information : Elevation Above Waterbody Floor	1	-999999	REAL	Metre	0	The elevation of an object measured vertically from the waterbody floor to the base (lowest point) of the object.
<i>allowed values:</i> -999999						
New Feature Code	1	BD050	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BD050						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Hydrographic Vertical Positioning Information : Height Above Waterbody Floor	1	-999999	REAL	Metre	0	The height of an object measured vertically from the waterbody floor to the top (highest point) of the object.
<i>allowed values:</i> -999999						
Hydrographic Vertical Positioning Information : Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999						
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999	REAL	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999						
Hydrographic Vertical Positioning Information : Hydrographic Drying Height	1	-999999	REAL	Metre	0	The height of the feature, which tidal waters cover and uncover, referenced to a specified sounding datum.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						

Hydrographic Vertical Positioning Information : Maritime Navigation Marked	1	No Information	Boolean	Unitless	0	An indication that a feature is significant to maritime safety of navigation and is marked (for example: by a light or beacon) by a maritime-specific navigational aid. [Description] Mariners may also use other prominent features (for example: rotating aeronautical beacons or lighted structures) for informal navigational purposes.
allowed values: FALSE			No Information			TRUE
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Non-submarine Contact Reporting Agency Type	1	No Information	Enumeration	Unitless	0	General classification of the source of a reported non-submarine contact. [Description] Based on specific fields in the US and UK Wreck Lists.
allowed values: Action Report Coast Guard Records No Information Photograph Report Survey US Naval Headquarters/Commands Report			Casualty Report Hydrographic/Admiralty Office North Sea Fishing Charts Position Accurate Field Check Survivor Report Wreck List			Chart MAD Report Notice to Mariners Salvage Report Undifferentiated Sonar or MAD Report Chart Records Minesweeper Other Sonar Report US Coast & Geodetic Survey/National Ocean Service Report
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values: Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)			Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)			Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM) Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						

Hydrographic Vertical Positioning Information : Sonar-confirmed	1	No Information	Boolean	Unitless	0	An indication that a contact or other object has been confirmed by sonar.
<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
Hydrographic Vertical Positioning Information : Sounding Metadata : Sounding Datum	1	No Information	Enumeration	Unitless	0	The tidal datum to which soundings and drying heights are referenced. [Description] It is usually taken to correspond to a low water stage of the tide.
<i>allowed values:</i>	Approximate Lowest Astronomical Tide Approximate Mean Sea Level High Water Highest Astronomical Tide International Great Lakes Datum 1985 Lower Low Water Lowest Low Water Springs Mean Higher High Water Mean Low Water Springs Mean Tide Level Nearly Lowest Low Water <i>Slant</i>		Approximate Mean Low Water Chart Datum (Unspecified) High Water Springs Highest High Water Local Datum Lower Low Water Large Tide Mean High Water Mean Higher High Water Springs Mean Lower Low Water Mean Water Level No Information Spring Tide		Approximate Mean Low Water Springs <i>Drying Heights</i> Higher High Water Indian Spring High Water Low Water Lowest Astronomical Tide Mean High Water Neaps Mean Low Water Mean Lower Low Water Springs Neap Tide <i>Ordinary</i>	Approximate Mean Lower Low Water Equinoctial Spring Low Water Higher High Water Large Tide Indian Spring Low Water Low Water Springs Lowest Low Water Mean High Water Springs Mean Low Water Neaps Mean Sea Level Nearly Highest High Water <i>Other</i>
Hydrographic Vertical Positioning Information : Sounding Metadata : Sounding Datum Name	1	No Information	String	Unitless	80	The name of the tidal datum to which soundings and drying heights are referenced. [Description] Used when the sounding datum is known but not specified using Attribute: 'Sounding Datum'.
<i>allowed values:</i> No Information						
Hydrographic Vertical Positioning Information : Sounding Metadata : Sounding Velocity Correction Method	1	No Information	Enumeration	Unitless	0	The method of correction that has been used to correct a sounding velocity instrument reading to obtain the correct depth.
<i>allowed values:</i>	Mathews Tables Sound Velocity Meter		No Information Sounder 1500 Calibrated		Not Applicable Sounder 4800 Calibrated	Other Sounder Other Calibrated
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i>	Ash Chalk Cobbles Diatomaceous Earth Gravel Madrepore Mud <i>Other</i> Pumice Sand Shell Spicules Volcanic Ash		Bedrock Cinders Conglomerate Foraminifera Ground Shell Manganese Mussels Oysters Quartz Schist Shingle Sponge		Boulders Cirripedia Coral Frozen Water Lava Marl <i>No Information</i> Pebbles Radiolaria Scoria Silt Stone	Calcareous Clay Coral Head Fucus Loess Matte Ooze Plant Material Rock Sea Moss Soil Tufa
Submarine-like Object	1	No Information	Boolean	Unitless	0	An indication that an object on the sea floor (for example: a wreck) could be mistakenly identified as an operable submarine when detected (for example: using acoustic or magnetic sensors).
<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
Hydrographic Vertical Positioning Information : Uncovering Height Known	1	No Information	Boolean	Unitless	0	An indication that information is known about the height to which a marine feature may be uncovered by the tide.
<i>allowed values:</i> <i>FALSE</i>			No Information			<i>TRUE</i>

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Hydrographic Vertical Positioning Information : Sounding Metadata : Vessel Draft Correction	1	No Information	Boolean	Unitless	0	An indication that a vessel draft correction has been applied.
---	---	----------------	---------	----------	---	--

allowed values: False

No Information

True

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Fountain (Area 00)

New ☐ Fountain

A monumental and/or ornamental structure containing moving water, often including jets, falls, or other decorative features. [Description] The structure is often of a civic nature; the water is typically recirculated.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
-----------	-------------	---------	-----------	-------	--------	----------------------

Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
------	---	---------	------	--------------	---	---

allowed values: -999999

New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
--	---	---------	------	----------------------	--	--

allowed values: -999999

New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
---	---	---------	------	----------------------	--	---

allowed values: -999999

New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
---	---	---------	------	----------------------------	--	--

allowed values: -999999

New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
--	---	---------	------	----------------------	--	---

allowed values: -999999

Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
-----------------------------	---	----------------	-------------	----------	--	--

allowed values: No Information
Partially Operational

Non-operational
Planned

Not in Operation
Temporarily Non-operational

Operational

New	Feature Code	1	BH075	CONSTRAINED_STRING	Unitless	5	Feature Code
	<u>allowed values:</u> BH075						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999						
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999						
	Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<u>allowed values:</u> Dry			Intermittent			No Information Perennial
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<u>allowed values:</u> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information			True
New	Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<u>allowed values:</u> -999999						
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<u>allowed values:</u> Damaged			Destroyed			Dismantled Intact
	No Information			Ruined			Site Preparation Under Construction
	Unmaintained						
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<u>allowed values:</u> U						

Process Step Information : Resource Content Originator						1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)						1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:						No Information					
Restriction Information : Security Attributes Group (resource owner-producer)						1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:						No Information					
Specified Domain Values(s)						1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:						No Information					
New	Water Resource Information : Sulfate Concentration					1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
allowed values:						-999999					
New	Water Resource Information : Temperature					1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
allowed values:						-999999					
New	Water Resource Information : Total Dissolved Solids					1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.
allowed values:						-999999					
New	Water Resource Information : Turbidity					1	-999999	Real	Nephelometric Turbidity Units		The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
allowed values:						-999999					
Unique Entity Identifier						1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:						No Information					

	Volume	1	-999999	REAL	Cubic Metre	The volume of a feature. [Description] For example, the storage capacity of a water tower.
	<i>allowed values:</i> -999999					
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	The electrical conductivity of water.
	<i>allowed values:</i> -999999					
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i> -999999					
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless 0	The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i> Contaminated Potable No Information Treatable Nonpotable Other					
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless 0	The type of available water based on its composition.
	<i>allowed values:</i> Alkaline Mineral No Information Not Applicable					
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
	<i>allowed values:</i> Agricultural Irrigation Commercial Livestock Domestic Irrigation Industrial Institutional Power Generation Municipal No Information Other Recreational Sanitary Domestic					
	Width	1	-999999	REAL	Metre 0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Fountain (Point 00)New ☐ Fountain

A monumental and/or ornamental structure containing moving water, often including jets, falls, or other decorative features. [Description] The structure is often of a civic nature; the water is typically recirculated.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New	Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
	<i>allowed values:</i> -999999					

New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<u>allowed values:</u> -999999						
	Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
	<u>allowed values:</u> No Information Partially Operational			Non-operational Planned		Not in Operation Temporarily Non-operational	Operational
New	Feature Code	1	BH075	CONSTRAINED_STRING	Unitless	5	Feature Code
	<u>allowed values:</u> BH075						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999						
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999						
	Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<u>allowed values:</u> Dry			Intermittent		No Information	Perennial
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<u>allowed values:</u> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						

	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False		No Information				True
New	Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<i>allowed values:</i> -999999						
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<i>allowed values:</i> U						
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
	<i>allowed values:</i> No Information						
	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
	<i>allowed values:</i> No Information						
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
	<i>allowed values:</i> No Information						
New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
	<i>allowed values:</i> -999999						

New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units		The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<i>allowed values:</i> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<i>allowed values:</i> No Information						
	Volume	1	-999999	REAL	Cubic Metre		The volume of a feature. [Description] For example, the storage capacity of a water tower.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime		The electrical conductivity of water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre		The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i> -999999						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i> Contaminated Potable			No Information Treatable			Nonpotable Other
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
	<i>allowed values:</i> Alkaline			Mineral			No Information Not Applicable
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
	<i>allowed values:</i> Agricultural Irrigation Institutional Other			Commercial Livestock Power Generation			Domestic Irrigation Municipal Recreational Industrial No Information Sanitary Domestic
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature FuelStorageFacility (Area 00)New ☐ Fuel Storage Facility

A facility for the storage of fuel (for example: jet fuel, gasoline, or diesel oil). [Description] The fuel is typically stored in large tanks that may be partially or wholly buried and is accompanied by metering and dispensing equipment. Facilities may range in size from a small stockpile of drums (sometimes termed a 'fuel dump') to a large perimeter-controlled site with multiple permanent surface tanks, in-ground pipelines and associated equipment (sometimes termed a 'fuel depot').

	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999						
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999						
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999						
	Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
	<i>allowed values:</i> False			No Information			True
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False			No Information			True
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<i>allowed values:</i> U						

Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Gantry (Line 00)New ☐ Gantry

A permanent raised structure used to support equipment (for example: cranes, signal lights, or signs) while spanning over or around an object (for example: over a road or railroad, or around a ship hull or rocket). [Description] A gantry may be moveable (for example: a rocket gantry may be repositioned away from the launch pad when pre-launch preparations are complete). A 'scaffold' is a structure that may be similar in appearance but is assembled only for temporary use (for example: during external repair of a building).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition

Feature Gate (Line 00)

New ☐ Gate

A barrier on a transportation route (for example: a road, a railway, a tunnel, or a bridge) that controls passage (may be opened and closed).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i>	Civilian		International			Joint Military and Civilian
	National		No Information			Other
	Public		State			Military
						Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i>	No Information		Non-operational			Not in Operation
	Partially Operational		Planned			Temporarily Non-operational
						Operational

New	Feature Code	1	AP040	CONSTRAINED_ STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AP040						
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
	<i>allowed values:</i> Agriculture Other Security Services			Botanical and/or Zoological Reserve Activities Public Order Transport			Guard Public Order, Safety and Security Services No Information Residence
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
	Gate Use	1	No Information	Enumeration	Unitless	0	The type of a gate (or similar route barrier) based on its intended use.
	<i>allowed values:</i> Border Crossing Other			Crossing Toll-gate			Entrance No Information
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999						
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<i>allowed values:</i> U						
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)		1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.		
allowed values: No Information									
Restriction Information : Security Attributes Group (resource owner-producer)		1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.		
allowed values: No Information									
Route Total Usable Width		1	-999999	REAL	Metre	0	The total usable width of the travelled way of a route. [Description] Includes pavements and shoulders.		
allowed values: -999999									
Specified Domain Values(s)		1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.		
allowed values: No Information									
Thickness		1	-999999	REAL	Metre	0	The distance between the two opposite surfaces of an object, usually the distance of smallest measure. [Description] The third dimension of an object, distinct from length and width (breadth).		
allowed values: -999999									
Transportation System Type		3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.		
allowed values: Bus				No Information			Other		Pedestrian
Railway				Road			Truck		Underground Railway
Unique Entity Identifier		1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.		

allowed values: No Information

Feature GaugingStation (Point 00) New ☐ Gauging Station

A device that monitors river flow and/or depth, and any associated support structures.

	Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
New	Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
	<i>allowed values:</i> -999999						
	Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<i>allowed values:</i> [-999999, -999999]			No Information			
New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<i>allowed values:</i> -999999						
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999						
New	Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
	<i>allowed values:</i> -999999						
New	Feature Code	1	BI070	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BI070						
	Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
	Geographic Name Type	2	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Other			Historical Transliterated Provisional			Native Transliterated Unverified Transliterated No Information Variant Transliterated

New	Least Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<u>allowed values:</u> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
New	Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<u>allowed values:</u> -999999						
New	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical state of a structure, or site, as a whole.
	<u>allowed values:</u> Damaged No Information Under Construction			Destroyed Other Unmaintained			Dismantled Ruined Intact Site Preparation
	Predominant Average Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average water velocity, exclusive of high water due to runoff or low water due to drought.
	<u>allowed values:</u> [-999999, -999999]			No Information			
	Predominant Maximum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<u>allowed values:</u> [-999999, -999999]			No Information			
	Predominant Maximum Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.
	<u>allowed values:</u> [-999999, -999999]						
	Predominant Minimum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<u>allowed values:</u> [-999999, -999999]			No Information			
	Predominant Minimum Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average minimum (seasonal low water) water velocity, exclusive of high water due to runoff or low water due to drought.
	<u>allowed values:</u> [-999999, -999999]						
	Predominant Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<u>allowed values:</u> [-999999, -999999]			No Information			
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<u>allowed values:</u> U						
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

	U.S. Transportation Command (USTRANSCOM)						
	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
	allowed values:	No Information					
	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
	allowed values:	No Information					
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information						
Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.	
allowed values:	-999999						
Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.	
allowed values:	-999999						
Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.	
allowed values:	-999999						
Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).	
allowed values:	-999999						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
allowed values:	No Information						
Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.	
allowed values:	-999999						

New	Water Resource Information : Water Flow	1	-999999	Real	Cubic Metres per Second	0	The rate of water flow through or exiting from a feature.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<u>allowed values:</u> -999999						
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.
	<u>allowed values:</u>	Alkaline		Brackish		Brine	Fresh
		Mineral		No Information		Not Applicable	Other
		Saline		Seawater

<u>allowed values:</u> ZB060						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). Feature GeologicFault (Line 00)

New ☐ Geologic Fault

A fracture or zone of fractures in a rock formation, marked by the relative displacement on either side of the plane of the fracture. [Description] The intersection of a geologic fault with the ground surface is termed the 'fault trace' and is commonly plotted on maps to represent a fault. Since geologic faults do not usually consist of a single, clean fracture, the term 'fault zone' (or 'distributed fault') is often used when referring to the zone of complex deformation and numerous small fractures that is associated with the fault plane.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.

<u>allowed values:</u> No Information						
Geologic Fault Trace Visible	1	No Information	Boolean	Unitless	0	An indication that a geologic fault is visible at the ground surface.
<u>allowed values:</u> False			No Information			True
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). Feature GeopoliticalEntity (Area 00)

New ☐ Geopolitical Entity

A region controlled by a political community having an organized government and possessing internal and external sovereignty, most often as a State but sometimes having a dependent relationship on another political authority or a special sovereignty status. [Description] The degree of sovereignty may be limited in specific areas (for example: matters of economic, administrative, legislative, judicial, military and/or foreign policy). The region controlled by a sovereign geopolitical entity is commonly referred to as a 'country'.

[Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
	<u>allowed values:</u> -999999						
	Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<u>allowed values:</u> Dry			Intermittent			No Information Perennial
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<u>allowed values:</u> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information			True
New	Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<u>allowed values:</u> -999999						

Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

<i>allowed values:</i> No Information						
New Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999						
New Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999						
New Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999						
New Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999						

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
New Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
<i>allowed values:</i> -999999						
New Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
<i>allowed values:</i> -999999

New	Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature GrainElevator (Area 00)

New ☐ Grain Elevator**A tall structure, equipped for loading, unloading, processing, and/or storing grain.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information			Non-operational			Not in Operation
<i>Partially Operational</i>			Planned			Temporarily Non-operational
<i>Operational</i>						
New Feature Code	1	AM030	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AM030						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.

[Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.	
allowed values: No Information							
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
allowed values: No Information							
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).	
allowed values:	Aluminum Metal Reinforced Concrete		Concrete No Information Steel		Iron Other Wood		Masonry Prestressed Concrete

Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
---------------------------------	---	----------------	--------	----------	----	---

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.

allowed values: -999999

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u>	-999999					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u>	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u>	No Information					
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u>	False					No Information

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.

allowed values: No Information

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
--------------------------------	---	----------------	-------------	----------	---	--

<i>allowed values:</i> Aluminum Metal Reinforced Concrete			Concrete No Information Steel			Iron Other Wood Masonry Prestressed Concrete
---	--	--	-------------------------------------	--	--	--

Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
---------------------------------	---	----------------	--------	----------	----	---

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
---	---	----------------	--------	----------	-----	---

allowed values: No Information

Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Vegetation Characteristic	1	No Information	Enumeration	Unitless	0	The type of a vegetated area based on species, biome, physiography and/or structural organization.
allowed values:	Grassland Other		Grassland with Trees Tropical Grass		Meadow Without Trees	No Information
Vegetation Trafficability Impact	1	[-999999, -999999]	Real_Interval	Percent		The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
allowed values:	[-999999, -999999]					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i> Accurate			Approximate			Doubtful
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.	
allowed values: <i>No Information</i>							
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
allowed values: <i>No Information</i>							

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Gridiron (Area 00)

New ☐ Gridiron

A timber structure in the intertidal zone serving as a support for vessels at low stages of the tide to permit work on the exposed portion of the vessel's hull.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	BB115	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BB115						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction

Restriction Information : Security Attributes Group (resource classification)		1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
allowed values: <i>U</i>								
Process Step Information : Resource Content Originator		1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature Grove (Area 00)

New ☐ Grove

A small wood or similar collection of trees growing closely together. [Description] May occur naturally or be deliberately planted for shade, ornamentation, and/or as an orchard (for example: of olives or citrus fruit).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Canopy Cover	1	-999999	REAL	Percent	0	The fraction of canopy cover within a defined area during the season of maximum foliage. [Description] The canopy is formed by the upper branches of the trees in a forest forming a more or less continuous layer.
<i>allowed values:</i> -999999						
Conspicuous Air Category	1	No Information	Enumeration	Unitless	0	The manner in which an object is conspicuous when viewed from the air. [Description] A conspicuous feature is easily detected and identified under varying conditions (for example: lighting). Factors affecting conspicuousness include size, shape, and/or height.
<i>allowed values:</i> No Information			Not Conspicuous			Visual
Conspicuous Ground Category	1	No Information	Enumeration	Unitless	0	The manner in which an object is conspicuous when viewed from on the ground. [Description] A conspicuous feature is easily detected and identified under varying conditions (for example: lighting). Factors affecting conspicuousness include size, shape, and/or height.
<i>allowed values:</i> No Information			Not Conspicuous			Visual
Conspicuous Sea Category	1	No Information	Enumeration	Unitless	0	The manner in which an object is conspicuous when viewed from the sea. [Description] A conspicuous feature is easily detected and identified under varying conditions (for example: lighting). Factors affecting conspicuousness include size, shape, and/or height.
<i>allowed values:</i> No Information			Not Conspicuous			Visual
New Feature Code	1	EC050	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> EC050						
Feature Element Orientation	1	-999999	REAL	Arc Degree	0	The angular distance measured from true north (0 degrees) clockwise to the predominant linear pattern of the elements within a feature.
<i>allowed values:</i> -999999						
Foliage Type	1	No Information	Enumeration	Unitless	0	The predominant foliage type of the vegetation.
<i>allowed values:</i> Deciduous Other			Evergreen			Mixed No Information
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.	
<u>allowed values:</u> -999999							
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.	
<u>allowed values:</u> -999999							
Isolated	1	No Information	Boolean	Unitless	0	An indication that a feature (for example: a structure) is in the open by itself, isolated from other features of a similar type, and thus is visually distinct from surrounding features when viewed from a distance.	
<u>allowed values:</u> FALSENo InformationTRUE							
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<u>allowed values:</u> -999999

allowed values: FALSE

No Information

TRUE

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
--------	---	---------	------	-------	---	--

allowed values: -999999

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
-------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
---	---	----------------	--------	----------	----	--

allowed values: No Information

Predominant Vegetation Height	1	-999999	REAL	Metre	0	The predominant height (the height of at least 50 percent) of the vegetation.
-------------------------------	---	---------	------	-------	---	---

allowed values: -999999

Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
---	---	---	--------	----------	---	--

allowed values: U

Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

--	---	----------------	--------	----------	-----	---

allowed values: No Information

Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
---	---	----------------	--------	----------	-----	--

allowed values: No Information

Shelter Belt	1	No Information	Boolean	Unitless	0	An indication that a feature (for example: a linear stand of trees) functions as a shelter belt, protecting other features (for example: roads, railways, cropland, and/or structures) from the effects of adverse weather.
<i>allowed values:</i> False			No Information			True
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Stem Diameter	1	[-999999,-999999]	REAL_Interval	Unitless	0	The average diameter of the tree trunks in an area, measured at a height of approximately 1.5 metres or 4.5 feet on the high side (if on a hillside) above the surface of the ground. [Description] Commonly referred to as the 'diameter at breast height' (dbh). For trees up to 2 metres high, the stem diameter is measured at the mid-point between the ground and the stem tip.
<i>allowed values:</i> [-999999,-999999]						
Summer Canopy Cover	1	-999999	REAL	Percent	0	The fraction of canopy cover within a defined area during the summer season. [Description] The canopy is formed by the upper branches of the trees in a forest forming a more or less continuous layer.
<i>allowed values:</i> -999999						
Tree Spacing	1	[-999999,-999999]	REAL_Interval	Unitless	0	The average tree spacing between trees in a stand, determined from centre to centre of adjacent trees.
<i>allowed values:</i> [-999999,-999999]						
Undergrowth Density	1	[-999999,-999999]	REAL_Interval	Unitless	0	The fraction of land within a defined area that is covered by undergrowth (for example: scrub, brush, and/or bush).
<i>allowed values:</i> [-999999,-999999]						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Vegetation Species	3	No Information	Enumeration	Unitless	0	The predominant species of a tract of vegetation.
<i>allowed values:</i> Casuarina Eucalyptus No Information Pine			Coconut Filao Olive			Conifer Mangrove Other Cypress Nipa Palm
Vegetation Trafficability Impact	1	[-999999, -999999]	Real_Interval	Percent	0	The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
<i>allowed values:</i> [-999999, -999999]			-999999			
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Winter Canopy Cover	1	-999999	REAL	Percent	0	The fraction of canopy cover within a defined area during the winter season. [Description] The canopy is formed by the upper branches of the trees in a forest forming a more or less continuous layer.
<i>allowed values:</i> -999999

Feature Harbour (Area 00)

New ☐ Harbour

A natural or artificial improved body of water providing protection for vessels and generally anchorage and docking facilities. [Description] A harbour consists of both its port and its waters.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999, -999999]			No Information			
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National State			International No Information			Joint Military and Civilian Other Military Private
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BB005	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BB005						
Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Geographic Name Type	2	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Other			Historical Transliterated Provisional			Native Transliterated Unverified Transliterated No Information Variant Transliterated
Harbour Facility Function	3	No Information	Enumeration	Unitless	0	The primary function(s) of harbour facilities that are associated with a service or commercial operation of public interest.
<i>allowed values:</i> Bulk Terminal Marina Passenger Terminal Timber-yard			Container Terminal Naval Base Ro-Ro Terminal			Ferry Terminal No Information Shipyard Fishing Harbour Other Tanker Terminal
Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.

<u>allowed values:</u> -999999						
Hydrologic Persistence	1	No Information	Enumeration	Unitless		The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<u>allowed values:</u> Dry Perennial						
			Ephemeral		Intermittent	No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
New Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False						
			No Information		True	
New Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<u>allowed values:</u> -999999						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<u>allowed values:</u> Damaged No Information Unmaintained						
			Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction
Predominant Maximum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> [-999999, -999999]						
			No Information			
Predominant Minimum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> [-999999, -999999]						
			No Information			
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
New Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
allowed values: -999999						
New Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
allowed values: -999999						
Tide Influenced	1	No Information	Boolean	Unitless	0	An indication that a waterbody is affected by the tide.
allowed values: False						
			No Information		True	
New Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
allowed values: -999999						
New Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
allowed values: -999999						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						

New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<u>allowed values:</u> -999999						
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.
	<u>allowed values:</u> Alkaline Mineral Saline			Brackish No Information Seawater		Brine Not Applicable	Fresh Other
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999						
	World Port Index Identifier	1	No Information	String	Unitless	14	The unique identifier element in the NGA World Port Index (Publication 150). [Description] The World Port Index lists all of the major shipping ports in the world, giving all the information (for example: latitude and longitude, facilities information, tidal data, and customs information) that a ship captain might need to prepare for a visit.

Feature HardenedAircraftShelter (Area 00)New ☐ Hardened Aircraft Shelter

A hardened structure built above or partially above ground that encloses aircraft to provide protection from enemy attack. [Description] The shelter is closed by blast resistant doors and is generally limited in size, only accommodating one or two relatively smaller (for example: fighter) aircraft. Those built to NATO specifications are designed to withstand a direct hit by a 226 kilogram bomb.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<u>allowed values:</u> No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<u>allowed values:</u> False			No Information	True		
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<u>allowed values:</u> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.

	<i>allowed values:</i> No Information Partially Operational		Non-operational Planned			Not in Operation Temporarily Non-operational	Operational
New	Feature Code	1	GB250	CONSTRAINED_ STRING	Unitless	5	Feature Code
	<i>allowed values:</i> GB250						
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
	<i>allowed values:</i> Air Transport Defence Activities Other			Aircraft Repair Emergency Operations Warehousing and Storage			Armory Meeting Place Cargo Handling No Information
New	Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The type of designated hazard protection shelter based on the kind of emergency. [Description] These shelters may be inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
	<i>allowed values:</i> Bomb Shelter Storm Shelter			Fallout Shelter			No Information Other
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999						
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999						
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
New	Multi-unit Building	1	No Information	Boolean	Unitless	0	An indication that a building is divided into two or more distinct sets of rooms or other interior spaces that are internally fully-connected while being separated from each other and common areas by controlled access point(s) (for example: lockable doors) that enable physical privacy and security for its occupants.
	<i>allowed values:</i> FALSE			No Information			TRUE
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False			No Information			True
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<i>allowed values:</i> U						
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
allowed values:	No Information					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature HardenedAircraftShelter (Point 00)New ☐ Hardened Aircraft Shelter

A hardened structure built above or partially above ground that encloses aircraft to provide protection from enemy attack. [Description] The shelter is closed by blast resistant doors and is generally limited in size, only accommodating one or two relatively smaller (for example: fighter) aircraft. Those built to NATO specifications are designed to withstand a direct hit by a 226 kilogram bomb.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999

<i>allowed values:</i> Air Transport Defence Activities Other			Aircraft Repair Emergency Operations Warehousing and Storage			Armory Meeting Place Cargo Handling No Information
New Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The type of designated hazard protection shelter based on the kind of emergency. [Description] These shelters may be inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
<i>allowed values:</i> Bomb Shelter Storm Shelter			Fallout Shelter			No Information Other
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AD050	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AD050						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Commerce Other			Government Residence			Manufacturing No Information

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
allowed values:	Brick No Information Steel		Concrete Other Stone			Masonry Prestressed Concrete Wood Metal Reinforced Concrete
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Helipad (Area 00)

New ☐ Helipad

A designated area, usually with a prepared surface, used for the take-off, landing, or parking of helicopters. [Description] This prepared surface could either be located on land or on a platform over water. It may or may not be associated with an aerodrome. For example: a hospital helipad, and an offshore rig helipad.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aerodrome Pavement Information : Aerodrome Movement Area Surface Category	1	No Information	Enumeration	Unitless	0	The level of preparation of the aerodrome movement area surface, as a category. [Description] Common category types may range from natural to completely paved.
allowed values:			Completely Paved Partially Paved	Mostly Paved Unpaved	No Information Unprepared	Other
Aerodrome Pavement Information : Aerodrome Movement Area Surface Composition	3	No Information	Enumeration	Unitless	0	The type of the predominant material of which a surface of the movement area is composed. [Description] Example surfaces include: asphalt, concrete, or grass.
allowed values:			Asphalt Clay Gravel Macadam Other Stone	Asphalt Over Concrete Concrete Ice Membrane Pierced Steel Planking Water	Bituminous Mix Coral Landing Mat No Information Sand Wood	Brick Earthen Laterite Non-bituminous Mix Snow
Aerodrome Pavement Information : Aerodrome Movement Area Surface Preparation Method	3	No Information	Enumeration	Unitless	0	The preparation technique(s) applied to a surface composition.
allowed values:			Aggregate Seal Coat No Information Rolled	Graded Oiled Rubberized Seal Coat	Grass Other	Grooved Porous Friction Course
Aerodrome Pavement Information : Aerodrome Pavement Functional Status	1	No Information	Enumeration	Unitless	0	The functional status of the pavement of an aerodrome movement area. [Description] An aerodrome movement area is that part of an aerodrome to be used for aircraft movement operations, consisting of the manoeuvring area and the apron(s).
allowed values:			Fair No Information Unserviceable	Fair Estimated Poor	Good Poor Estimated	Good Estimated Under Construction
Aerodrome Surface Status	1	No Information	Enumeration	Unitless	0	The operational status of an aerodrome movement area, as a category. [Description] For example: serviceable, unserviceable, closed, or work-in-progress.
allowed values:			Closed Work in Progress	No Information	Open	Parked or Disabled Aircraft

Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i>	-999999					
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i>	Civilian National Public		International No Information State	Joint Military and Civilian Other	Military Private	
Delineation Known	1	No Information	Boolean	Unitless	0	An indication that the delineation (for example: limits and information) of a feature is known.
<i>allowed values:</i>	FALSE		No Information		TRUE	
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i>	No Information Partially Operational		Non-operational Planned	Not in Operation Temporarily Non-operational	Operational	
New Feature Code	1	GB030	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i>	GB030					
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i>	No Information					
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i>	-999999					
Helipad Associated Facility	1	No Information	Enumeration	Unitless	0	The type of facility or building that is associated with a freestanding helipad.
<i>allowed values:</i>	Heliport No Information Rig		Hospital Non-hospital Building Water Aerodrome	Land Aerodrome Offshore Construction	Military Installation Other	
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i>	-999999					
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i>	-999999					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i>	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i>	No Information					
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i>	Damaged No Information Unmaintained		Destroyed Ruined	Dismantled Site Preparation	Intact Under Construction	

Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
allowed values: -999999

Feature Helipad (Point 00)New ☐ Helipad

A designated area, usually with a prepared surface, used for the take-off, landing, or parking of helicopters. [Description] This prepared surface could either be located on land or on a platform over water. It may or may not be associated with an aerodrome. For example: a hospital helipad, and an offshore rig helipad.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aerodrome Pavement Information : Aerodrome Movement Area Surface Category	1	No Information	Enumeration	Unitless	0	The level of preparation of the aerodrome movement area surface, as a category. [Description] Common category types may range from natural to completely paved.
<i>allowed values:</i> Completely Paved Partially Paved			Mostly Paved Unpaved			No Information Unprepared Other
Aerodrome Pavement Information : Aerodrome Movement Area Surface Composition	3	No Information	Enumeration	Unitless	0	The type of the predominant material of which a surface of the movement area is composed. [Description] Example surfaces include: asphalt, concrete, or grass.

<i>allowed values:</i> GB035						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
ICAO Location Indicator	1	No Information	String	Unitless	14	The identifier that is assigned to a location in accordance with rules prescribed by the International Civil Aviation Organization (ICAO) in Document 7910. [Description] If available this indicator shall be used as primary for identification.
<i>allowed values:</i> No Information						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged Destroyed Dismantled Intact No Information Ruined Site Preparation Under Construction Unmaintained						
Port of Entry	1	No Information	Boolean	Unitless	0	An indication that a facility is a port of entry for customs and immigration purposes.
<i>allowed values:</i> False No Information True						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Heliport (Point 00)

New ☐ Heliport

An aerodrome intended to be used for the arrival, landing, takeoff or departure of vertical takeoff and landing aircraft/helicopters.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aerodrome Elevation	1	-999999	REAL	Metre	0	The vertical distance above Mean Sea Level (MSL) of the highest point of the landing area.
allowed values: -999999						
Aerodrome Official Name	1	No Information	String	Unitless	80	The primary official name of an aerodrome as designated by an appropriate authority.
allowed values: No Information						
Airfield Symbol Type	1	No Information	Enumeration	Unitless	0	The type of airfield symbol designation.
allowed values: Active Joint (Civilian/Military) Heliport L - Active Civil Heliport (with less than minimum facilities)			H - Active Military Heliport No Information			J - Active Civil Heliport K - Active Military Heliport (with less than minimum facilities) X - Decoy
Airfield Type	1	No Information	Enumeration	Unitless	0	The type of an airfield based on the size and/or paving of its runways.
allowed values: Major No Information			Minor Other			Minor and Hard Minor and Soft
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
allowed values: Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
Delineation Known	1	No Information	Boolean	Unitless	0	An indication that the delineation (for example: limits and information) of a feature is known.
allowed values: FALSE			No Information			TRUE
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a facility, as a whole.

		<i>allowed values:</i> No Information <i>Partially Operational</i>	Non-operational Planned		Not in Operation Temporarily Non-operational		<i>Operational</i>
New	Feature Code	1	GB035	CONSTRAINED_ STRING	Unitless	5	Feature Code
		<i>allowed values:</i> <i>GB035</i>					
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
		<i>allowed values:</i> No Information					
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
		<i>allowed values:</i> <i>-999999</i>					
	ICAO Location Indicator	1	No Information	String	Unitless	14	The identifier that is assigned to a location in accordance with rules prescribed by the International Civil Aviation Organization (ICAO) in Document 7910. [Description] If available this indicator shall be used as primary for identification.
		<i>allowed values:</i> No Information					
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
		<i>allowed values:</i> <i>-999999</i>					
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
		<i>allowed values:</i> No Information					
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
		<i>allowed values:</i> No Information					
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
		<i>allowed values:</i> <i>Damaged</i> No Information <i>Unmaintained</i>	<i>Destroyed</i> <i>Ruined</i>		<i>Dismantled</i> <i>Site Preparation</i>		<i>Intact</i> <i>Under Construction</i>
	Port of Entry	1	No Information	Boolean	Unitless	0	An indication that a facility is a port of entry for customs and immigration purposes.
		<i>allowed values:</i> <i>False</i>	No Information		<i>True</i>		
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
		<i>allowed values:</i> <i>U</i>					
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

[Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.

allowed values: No Information							
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
allowed values: No Information							

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature HopField (Area 00)

New ☐ Hop Field

A tract covered by the systematic planting of hop vines.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Crop Information : Crop Species	1	Hop	Enumeration	Unitless	0	The predominant species of a crop land.
<i>allowed values:</i> Hop						
Crop Information : Farming Pattern	3	No Information	Enumeration	Unitless	0	The general arrangement(s) and/or pattern(s) of farming fields.
<i>allowed values:</i> Intermingled Trees No Information Treeless			Intermingled Woods Other Trellised			Irregular Regular Linear Terraced
New Feature Code	1	EA055	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> EA055						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Crop Information : Irrigation Method	1	No Information	Enumeration	Unitless	0	The method used to supply crops with water.
<i>allowed values:</i> Center Pivot Other			Furrow Overhead			Linear Move No Information

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
allowed values:	No Information					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
allowed values:	-999999

allowed values: -999999

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values: False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
allowed values: Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

<u>allowed values:</u> Gas Oil Separation Pipeline Transport			No Information Terminal			Other Transfer Hub Petroleum Refining
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						

Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999

Feature HydrocarbonsField (Area 00)

New ☐ Hydrocarbons Field

An area where the presence of recoverable petroleum, oil, and/or natural gas has been identified. [Description] The field can exist regardless of current exploitation activities.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
New Feature Code	1	AA052	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: AA052						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values: No Information						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
allowed values: Gas			No Information			Other Petroleum
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.

allowed values: U

Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values:	<div> Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM) </div> <div> Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM) </div> <div> Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM) </div> <div> Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM) </div>					
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature IceCliff (Line 00)New ☐ Ice Cliff**The vertical face of a glacier or ice shelf.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
New Feature Code	1	BJ040	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> BJ040						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Predominant Feature Height	1	-999999	REAL	Metre	0	The predominant height (the height of at least 50 percent) of the feature measured from the lowest point of the base at ground or water level (downhill side/downstream side).
<u>allowed values:</u> -999999						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						

Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Feature IcePeak (Point 00)

New ☐ Ice Peak

A rocky peak projecting above a surrounding ice field that may be perpetually covered with ice.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
-----------	-------------	---------	-----------	-------	--------	----------------------

Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999						
New Feature Code	1	BJ060	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> BJ060						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False			No Information			True
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature IceShelf (Area 00)New ☐ Ice Shelf

A floating ice sheet of considerable thickness that is normally attached to the land along its landward edge. [Description] Ice shelves are the seaward extension of land glaciers. Limited areas of the ice shelf may be aground where the glacier first enters the water and possibly in other places offshore. Ice shelves are usually of great horizontal extent and have a level or gently undulating surface. The seaward edge of an ice shelf is termed an 'ice cliff'.

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature IndustrialFarm (Area 00)

New ☐ Industrial Farm

An estate or large farm operating on the plantation economy model in which the farm operates as a single economic unit whose operations are based on agricultural mass production of a few staple crops (for example: cotton, tobacco, sugar cane, bananas, and/or rubber) that are typically not indigenous to the region. [Description] Plantation economies are often dependent on distant (for example: export) markets as the crops are harvested in large quantities. Historically, industrial farms were often found in former European colonies and termed 'plantations'.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Canopy Cover	1	-999999	REAL	Percent	0	The fraction of canopy cover within a defined area during the season of maximum foliage. [Description] The canopy is formed by the upper branches of the trees in a forest forming a more or less continuous layer.
<i>allowed values:</i> -999999						
Crop Information : Crop Species	3	No Information	Enumeration	Unitless	0	The predominant species of a crop land.
<i>allowed values:</i> Bamboo Coffee Oil Crop Sugar Cane Tobacco			Banana Cork-Oak Oil Palm Sugar Crop			Cacao Cotton Other Tea Coconut No Information Rubber Timber

Crop Information : Farming Pattern	3	No Information	Enumeration	Unitless	0	The general arrangement(s) and/or pattern(s) of farming fields.
<i>allowed values:</i> Intermingled Trees No Information Treeless			Intermingled Woods Other Trellised			Irregular Regular Linear Terraced
New Feature Code	1	AL270	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL270						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Emergency Operations No Information			Growing of Crops Other			Meeting Place Mixed Farming
Foliage Type	1	No Information	Enumeration	Unitless	0	The predominant foliage type of the vegetation.
<i>allowed values:</i> Deciduous Other			Evergreen			Mixed No Information
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information		True	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction
Predominant Vegetation Height	1	-999999	REAL	Metre	0	The predominant height (the height of at least 50 percent) of the vegetation.
<i>allowed values:</i> -999999						
Manufacturing Information : Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Coffee Fish Milk Olive Oil Salt Vegetation Product			Consumer Goods Food Milled Grain Other Sugar Wine		Cotton Fruit No Information Rice Textile	Desalinated Water Lumber No Product Rubber Tobacco
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Vegetation Species	3	No Information	Enumeration	Unitless	0	The predominant species of a tract of vegetation.
<i>allowed values:</i> Bamboo Cypress Palm Nipa No Information						
Vegetation Trafficability Impact	1	[-999999, -999999]	Real_Interval	Percent		The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
<i>allowed values:</i> [-999999, -999999]						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature IndustrialFurnace (Area 00)New ☐ Industrial Furnace

A structure used in material processing that employs heating to harden (for example: to fire brick or ceramic), pyrolyse (for example: convert coal to coke, or limestone to lime), burn (for example: to incinerate waste), or dry (for example: lumber). [Description] May assume many forms, for example a domed 'beehive' kiln or a long linear coke oven battery.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational						
New Feature Code	1	AC060	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AC060						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Brick Lumber			Cement No Information			Charcoal Other Lime Pottery
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature InlandWaterbody (Area 00)New ☐ Inland Waterbody

A body of water that is entirely surrounded by land. [Description] It may occur in a natural terrain depression in which water collects, or may be impounded by a dam, or formed by its bed being hollowed out of the soil, or formed by embanking and/or damming up a natural hollow (for example: by a beaver dam). Inland waterbodies have many uses such as: a source of water for irrigation, industrial processes, human consumption, and recreation. Impounded inland waterbodies may also be used for flood control.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Inland Waterbody Bank (2) : Above Water Bank Slope (second bank)	1	-999999	REAL	Percent	0	The amount of upward inclination between the horizontal surface of the mean water level of a watercourse where it touches the bank and the top of the first usable break in slope, measured at the same point on the upper bank as the military gap width. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: $((h2-h1)/d)*100$.
<i>allowed values:</i> -999999						
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
Average Water Depth	1	-999999	REAL	Metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> -999999						
Inland Waterbody Bank (2) : Bank Orientation (second bank)	1	No Information	Enumeration	Unitless	0	The relative orientation of a bank of an inland waterbody based on the direction of predominant water flow in the adjacent waterbody.
<i>allowed values:</i> Indeterminate Other			Left Right			No Flow No Information
<i>allowed values:</i> Indeterminate Other			Left Right			No Flow No Information
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless		The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN ⁻ . These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999						

	Dammed	1	No Information	Boolean	Unitless	0	An indication that a body of water is impounded by a dam.
	<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
New	Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
	<i>allowed values:</i> <i>-999999</i>						
	Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
	<i>allowed values:</i> <i>No Information</i> <i>Partially Operational</i>			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New	Feature Code	1	BH082	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> <i>BH082</i>						
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
	<i>allowed values:</i> <i>Commerce</i> <i>Recreation</i>			Navigation Utilities			No Information Other
	Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> <i>No Information</i>						
	Geographic Name Type	3	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> <i>Conventional</i> <i>Other</i>			Historical Transliterated Provisional			Native Transliterated Unverified Transliterated No Information Variant Transliterated
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> <i>-999999</i>						
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<i>allowed values:</i> <i>Dry</i>			Intermittent			No Information Perennial
	Inland Water Type	1	No Information	Enumeration	Unitless	0	The type of an inland water based on its principal characteristics.
	<i>allowed values:</i> <i>Basin</i> <i>Other</i> <i>Water-hole</i>			Lake Pond			Landlocked Sea Reservoir No Information Undifferentiated Water Body
	Inundation Type	1	No Information	Enumeration	Unitless		The type of an inundation based on the cause of the flooding.
	<i>allowed values:</i> <i>Controlled</i>			Natural			No Information
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> <i>-999999</i>						
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<i>allowed values:</i> <i>-999999</i>						
	Man-made	1	No Information	Boolean	Unitless	0	An indication that a feature is man-made.
	<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
	Man-made Shoreline	1	No Information	Boolean	Unitless	0	An indication that a body of water is completely surrounded by a man-made shoreline.
	<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Predominant Maximum Water Depth	1	[-999999,-999999]	REAL_INTERVAL	Metre		The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999,-999999]						
Predominant Minimum Water Depth	1	[-999999,-999999]	REAL_INTERVAL	Metre		The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999,-999999]						
Predominant Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999, -999999]			No Information			
Inland Waterbody Bank (1) : Predominant Waterbody Bank Height (first bank)	1	[-999999, -999999]	REAL_Interval	Metre	0	The predominant height (the height of at least 50 percent) of the bank, measured from mean water level to the first break in slope above the mean water level.
<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
Inland Waterbody Bank (1) : Predominant Waterbody Bank Slope (first bank)	1	[-999999, -999999]	REAL_Interval	Percent	0	The predominant slope (the slope of at least 50 percent) of the bank, measured from mean water level to the first accessible break in slope above the mean water level. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
New Water Resource Information : Reservoir Type	1	No Information	Enumeration	Unitless	0	Indicates the method of containing the water in a reservoir.
<i>allowed values:</i> Back-up Water Impounded by a Dam			Constructed Basin			No Information Other
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.

allowed values: <i>U</i>						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

	Sandy		Shingly		Stony	
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: <i>No Information</i>						
<i>New</i> Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
allowed values: <i>-999999</i>						
<i>New</i> Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
allowed values: <i>-999999</i>						
Tide Influenced	1	No Information	Boolean	Unitless	0	An indication that a waterbody is affected by the tide.

	<i>allowed values:</i> False		No Information		True		
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<i>allowed values:</i> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<i>allowed values:</i> No Information						
	Volume	1	-999999	REAL	Cubic Metre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i> -999999						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i> <div>Contaminated Potable</div>			<div>No Information Treatable</div>			<div>Nonpotable</div> <div>Other</div>
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
	<i>allowed values:</i> <div>Alkaline Mineral Seawater</div>			<div>Brackish No Information</div>			<div>Brine</div> <div>Not Applicable</div> <div>Fresh Saline</div>
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
	<i>allowed values:</i> <div>Agricultural Irrigation Institutional Other</div>			<div>Commercial Livestock Power Generation</div>			<div>Domestic Irrigation Municipal Recreational</div> <div>Industrial</div> <div>No Information</div> <div>Sanitary Domestic</div>
	Inland Waterbody Bank (2) : Waterbody Bank Height (second bank)	1	-999999	REAL	Metre	0	The height of the waterbody bank above the average water level.
	<i>allowed values:</i> -999999						
	<i>allowed values:</i> -999999						
	Inland Waterbody Bank (1) : Waterbody Bank Vegetation Cover (first bank)	1	[-999999, -999999]	REAL_Interval	Percent	0	The fraction of vegetation cover on the bank of a watercourse.
	<i>allowed values:</i> <div>[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval</div>			<div>Closed Interval Greater-than-or-equal to Less-than Interval</div>			<div>Greater-than or Equal Semi-interval Less-than or Equal Semi-interval</div> <div>Greater-than Semi-interval Less-than Semi-interval</div>
	<i>allowed values:</i> <div>[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval</div>			<div>Closed Interval Greater-than-or-equal to Less-than Interval</div>			<div>Greater-than or Equal Semi-interval Less-than or Equal Semi-interval</div> <div>Greater-than Semi-interval Less-than Semi-interval</div>

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature InlandWaterbody (Point 00)

New ☐ Inland Waterbody

A body of water that is entirely surrounded by land. [Description] It may occur in a natural terrain depression in which water collects, or may be impounded by a dam, or formed by its bed being hollowed out of the soil, or formed by embanking and/or damming up a natural hollow (for example: by a beaver dam). Inland waterbodies have many uses such as: a source of water for irrigation, industrial processes, human consumption, and recreation. Impounded inland waterbodies may also be used for flood control.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Inland Waterbody Bank (2) : Above Water Bank Slope (second bank)	1	-999999	REAL	Percent	0	The amount of upward inclination between the horizontal surface of the mean water level of a watercourse where it touches the bank and the top of the first usable break in slope, measured at the same point on the upper bank as the military gap width. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
<i>allowed values:</i> -999999						
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
Average Water Depth	1	-999999	REAL	Metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> -999999						
Inland Waterbody Bank (2) : Bank Orientation (second bank)	1	No Information	Enumeration	Unitless	0	The relative orientation of a bank of an inland waterbody based on the direction of predominant water flow in the adjacent waterbody.
<i>allowed values:</i> Indeterminate Other			Left Right			No Flow No Information
<i>allowed values:</i> Indeterminate Other			Left Right			No Flow No Information
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999						

	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Military Other Private
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999						
	Dammed	1	No Information	Boolean	Unitless	0	An indication that a body of water is impounded by a dam.
	<i>allowed values:</i> False			No Information			True
New	Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
	<i>allowed values:</i> -999999						
	Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	BH082	CONSTRAINED_ STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BH082						
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
	<i>allowed values:</i> Commerce Recreation			Navigation Utilities			No Information Other
	Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
	Geographic Name Type	3	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Other			Historical Transliterated Provisional			Native Transliterated Unverified Transliterated No Information Variant Transliterated
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999						
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<i>allowed values:</i> Dry			Intermittent			No Information Perennial
	Inland Water Type	1	No Information	Enumeration	Unitless	0	The type of an inland water based on its principal characteristics.
	<i>allowed values:</i> Basin Other Water-hole			Lake Pond			Landlocked Sea Reservoir No Information Undifferentiated Water Body
	Inundation Type	1	No Information	Enumeration	Unitless		The type of an inundation based on the cause of the flooding.
	<i>allowed values:</i> Controlled			Natural			No Information
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999						

New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<i>allowed values:</i> -999999						
	Man-made	1	No Information	Boolean	Unitless	0	An indication that a feature is man-made.
	<i>allowed values:</i> False			No Information			True
	Man-made Shoreline	1	No Information	Boolean	Unitless	0	An indication that a body of water is completely surrounded by a man-made shoreline.
	<i>allowed values:</i> False			No Information			True
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False			No Information			True
New	Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<i>allowed values:</i> -999999						
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
	Predominant Maximum Water Depth	1	[-999999,-999999]	REAL_INTERVAL	Metre		The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<i>allowed values:</i> [-999999,-999999]						
	Predominant Minimum Water Depth	1	[-999999,-999999]	REAL_INTERVAL	Metre		The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<i>allowed values:</i> [-999999,-999999]						
	Predominant Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<i>allowed values:</i> [-999999,-999999]			No Information			
	Inland Waterbody Bank (1) : Predominant Waterbody Bank Height (first bank)	1	[-999999, -999999]	REAL_Interval	Metre	0	The predominant height (the height of at least 50 percent) of the bank, measured from mean water level to the first break in slope above the mean water level.
	<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
	<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
	Inland Waterbody Bank (1) : Predominant Waterbody Bank Slope (first bank)	1	[-999999, -999999]	REAL_Interval	Percent	0	The predominant slope (the slope of at least 50 percent) of the bank, measured from mean water level to the first accessible break in slope above the mean water level. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.

	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
	<i>allowed values:</i> No Information						
New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
	<i>allowed values:</i> -999999						
	Tide Influenced	1	No Information	Boolean	Unitless	0	An indication that a waterbody is affected by the tide.
	<i>allowed values:</i> False			No Information			True
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<i>allowed values:</i> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<i>allowed values:</i> No Information						
	Volume	1	-999999	REAL	Cubic Metre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i> -999999						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i> Contaminated Potable			No Information			Nonpotable Other
				Treatable			
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
	<i>allowed values:</i> Alkaline Mineral Seawater			Brackish			Brine Fresh
				No Information			Not Applicable Saline
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
	<i>allowed values:</i> Agricultural Irrigation Institutional Other			Commercial Livestock Power Generation			Domestic Irrigation Municipal Recreational Industrial No Information Sanitary Domestic

Inland Waterbody Bank (2) : Waterbody Bank Height (second bank)	1	-999999	REAL	Metre	0	The height of the waterbody bank above the average water level.
<i>allowed values:</i> -999999						
<i>allowed values:</i> -999999						
Inland Waterbody Bank (1) : Waterbody Bank Vegetation Cover (first bank)	1	[-999999, -999999]	REAL_Interval	Percent	0	The fraction of vegetation cover on the bank of a watercourse.
<i>allowed values:</i> [-999999, -999999]			<i>Closed Interval</i>			<i>Greater-than or Equal Semi-interval</i>
<i>Greater-than to Less-than-or-equal Interval</i>			<i>Greater-than-or-equal to Less-than Interval</i>			<i>Greater-than Semi-interval</i>
<i>Open Interval</i>						<i>Less-than Semi-interval</i>
<i>allowed values:</i> [-999999, -999999]			<i>Closed Interval</i>			<i>Greater-than or Equal Semi-interval</i>
<i>Greater-than to Less-than-or-equal Interval</i>			<i>Greater-than-or-equal to Less-than Interval</i>			<i>Greater-than Semi-interval</i>
<i>Open Interval</i>						<i>Less-than Semi-interval</i>
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature Installation (Area 00)

New ☐ Installation

A grouping of facilities, located in the same vicinity, which support particular functions.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information			Non-operational			Not in Operation
<i>Partially Operational</i>			Planned			Temporarily Non-operational
<i>Operational</i>						
New Feature Code	1	AL011	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL011						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values: False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
allowed values: Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
--------	---	---------	------	-------	---	--

allowed values: -999999

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature InsubstantialNavMark (Point 00)

New ☐ Insubstantial Navigation Mark

A small, insubstantial navigational mark. [Description] For example, a staff placed on top of a rock or shoal to mark a hazard or serve as a navigational aid.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Hydrographic Base Height : Sounding Metadata : Bathymetric Measurement Quality Category	3	No Information	Enumeration	Unitless	0	A general evaluation of the qualities of a bathymetric measurement, as a category. [Description] Drying heights are typically captured using negative (bathymetric) sounding values; their certainty of measurement may be categorized in the same manner as positive values.

<i>allowed values:</i>	Depth Doubtful Least Depth <i>Not Applicable</i> Unconfirmed Depth			Depth Known Maintained Depth <i>Other</i> Unmaintained Depth		Depth Unknown No Bottom Reported Depth	Depth Unreliable <i>No Information</i> Safe Clearance Known
Hydrographic Base Height : Sounding Metadata : Bathymetric Measurement Technique	3	No Information	Enumeration	Unitless	0	The technique used to determine water depth(s).	
<i>allowed values:</i>	Area Swept by Side-scan Sonar Computer Generated Lead-line <i>Other</i> Singlebeam			Area Swept by Vertical Acoustic System Diver Levelling Photogrammetry Underwater Utility Vehicle		Area Swept by Wire-drag Echo Sounder Multi-beam Echo Sounder Satellite Imagery	Bathymetric LiDAR Electromagnetic Sensor <i>No Information</i> Side-scan Sonar
Beacon Type	1	No Information	Enumeration	Unitless	0	The type of a beacon based on its significance to maritime navigation.	
<i>allowed values:</i>	Cable Mark Ferry Crossing Mark Measured Distance Outfall Mark Reduced Wake Speed Limit Mark Target Mark			Cairn Insubstantial Navigation Mark <i>No Information</i> Overhead Power Cable Mark Restricted Horizontal Clearance Mark Starboard-hand Edge Telephone Mark		Channel Edge Gradient Leading Line <i>Not Applicable</i> Pile Beacon Restricted Vertical Clearance Mark Stop Mark Withy	Degaussing Range Mark Maximum Vessel's Draught Mark <i>Other</i> Port-hand Edge Sound Ship's Siren Strong Current Warning Mark
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.	
<i>allowed values:</i>	<i>No Information</i> <i>Partially Operational</i>			Non-operational Planned		Not in Operation Temporarily Non-operational	<i>Operational</i>
New Feature Code	1	BC080	CONSTRAINED_STRING	Unitless	5	Feature Code	
<i>allowed values:</i>	<i>BC080</i>						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.	
<i>allowed values:</i>	<i>No Information</i>						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.	
<i>allowed values:</i>	<i>-999999</i>						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.	
<i>allowed values:</i>	<i>-999999</i>						
Hydrographic Base Height	1	-999999	REAL	Metre	0	The height from a specified sounding datum to the bottom or base of a feature (for example: the base of a lighthouse).	
<i>allowed values:</i>	<i>-999999</i>						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i>	<i>No Information</i>						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i>	<i>No Information</i>						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.	

allowed values:	<i>Damaged</i> No Information <i>Unmaintained</i>			<i>Destroyed</i> <i>Ruined</i>		<i>Dismantled</i> <i>Site Preparation</i>		<i>Intact</i> <i>Under Construction</i>			
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.					
allowed values:	<i>U</i>										
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.					
allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) <i>No Information</i> Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)			Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) <i>Other</i> U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)			Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)			Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)

Feature InterestSite (Area 00)

New ☐ Interest Site

A site maintained for the public and declared to be of national or provincial historical significance and/or interest.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
allowed values:	No Information					
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values:	-999999					
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
allowed values:	No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational Operational	
New Feature Code	1	AL201	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values:	AL201					

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Historic Significance	1	No Information	Enumeration	Unitless	0	The recognized historic significance of a site and/or facility, if any.
<i>allowed values:</i> Ancient National Political			Battlefield No Information Religious			Historic Not Significant Military Other
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Religious Information : Religious Designation	1	No Information	Enumeration	Unitless	0	A designation denoting a religion or system of belief.
<i>allowed values:</i> Buddhism Islam Orthodox Shia			Chaldean Judaism Other Shinto			Christian Nestorian Protestant Sunni Hinduism No Information Roman Catholic
Religious Information : Religious Facility Type	1	No Information	Enumeration	Unitless	0	The type of a facility, building, structure or site that is designed and designated to be used for religious activities, based on its structure and/or the principal activity for which it was designed.

allowed values:	Burial Site Convent Mission Noviciate Retreat Synagogue	Cathedral Hermitage Monastery Other Seminary Tabernacle	Chapel Marabout Mosque Pagoda Shrine Temple	Church Minaret No Information Religious Community Stupa		
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values:	U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Water Line : Sounding Datum Name	1	No Information	String	Unitless	80	The name of the tidal datum to which soundings and drying heights are referenced. [Description] Used when the sounding datum is known but not specified using Attribute: 'Sounding Datum'.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Island (Point 00)

New ☐ Island

A land mass, other than a continent, surrounded by water.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.

allowed values: -999999

New Feature Code	1	BA030	CONSTRAINED_ STRING	Unitless	5	Feature Code
------------------	---	-------	---------------------	----------	---	--------------

allowed values: BA030

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
---	---	----------------	--------	----------	-----	---

allowed values: No Information

Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
----------------------------	---	---------	------	-------	---	---

allowed values: -999999

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
-------------------	---	---------	------	-------	---	---

allowed values: -999999

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values:	-999999					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values:	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values:	No Information					
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values:	False		No Information		True	
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values:	U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values:	<div> Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM) </div> <div> Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM) </div> <div> Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM) </div> <div> Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM) </div>					
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Shoreline Delineated	1	No Information	Boolean	Unitless	0	An indication that the delineation of a shoreline is definite. [Description] The delineation of the shoreline along a beach is typically definite whereas along a mangrove swamp it is typically indefinite.
allowed values:	False		No Information		True	

Shoreline Type	1	No Information	Enumeration	Unitless	0	The physical characteristics of a shoreline.
allowed values:	Building Rubble Mangrove Other		Coral Marshy Sandy			Erosion Rubble Mud Shingly Ice No Information Stony
Water Line : Sounding Datum	1	No Information	Enumeration	Unitless	0	The tidal datum to which soundings and drying heights are referenced. [Description] It is usually taken to correspond to a low water stage of the tide.
allowed values:	Highest High Water Lowest Low Water Mean Higher High Water Springs Mean Lower Low Water Springs		Indian Spring High Water Mean High Water Mean Low Water Mean Sea Level			Indian Spring Low Water Mean High Water Springs Mean Low Water Springs No Information Lowest Astronomical Tide Mean Higher High Water Mean Lower Low Water Other
Water Line : Sounding Datum Name	1	No Information	String	Unitless	80	The name of the tidal datum to which soundings and drying heights are referenced. [Description] Used when the sounding datum is known but not specified using Attribute: 'Sounding Datum'.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Lagoon (Area 00)New ☐ Lagoon

An enclosed area of salt or brackish water separated from the open sea by some more or less effective, but not complete, obstacle (for example: a sand bank). [Description] The name most commonly used for the area of water enclosed by a barrier reef or atoll.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
allowed values:	-999999					
Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
allowed values:	[-999999, -999999]		No Information			
Bottom Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing the bottom of a body of water.

							Other	Rocks and Boulders
allowed values:	Coral		No Information					
New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.	
allowed values:	-999999							
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.	
allowed values:	-999999							
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.	
allowed values:	-999999							
	Delineation Known	1	No Information	Boolean	Unitless	0	An indication that the delineation (for example: limits and information) of a feature is known.	
allowed values:	FALSE		No Information				TRUE	
New	Feature Code	1	BH190	CONSTRAINED_STRING	Unitless	5	Feature Code	
allowed values:	BH190							
	Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.	
allowed values:	No Information							
	Geographic Name Type	3	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.	
allowed values:	Conventional Other			Historical Transliterated Provisional			Native Transliterated Unverified Transliterated	No Information Variant Transliterated
	Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.	
allowed values:	-999999							
	Hydrologic Persistence	1	No Information	Enumeration	Unitless		The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.	
allowed values:	Dry Perennial			Ephemeral			Intermittent	No Information
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.	
allowed values:	-999999							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
allowed values:	No Information							
	Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
allowed values:	No Information							
New	Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.	
allowed values:	-999999							
	Predominant Maximum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.	
allowed values:	[-999999, -999999]			No Information				
	Predominant Minimum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.	
allowed values:	[-999999, -999999]			No Information				

Predominant Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
allowed values:	[-999999, -999999]					
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values:	U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
New Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
allowed values:	-999999					
New Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
allowed values:	-999999					
New Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
allowed values:	-999999					
New Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
allowed values:	-999999					

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
New Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
<i>allowed values:</i> -999999						
New Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
<i>allowed values:</i> -999999						
Hydrographic Vertical Positioning Information : Water Level Effect	1	No Information	Enumeration	Unitless	0	The relationship between the feature and surrounding (including covering and/or underlying) water.
<i>allowed values:</i> Always Dry Other			Always Submerged			Covers and Uncovers No Information
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline			Brackish No Information Seawater			Brine Not Applicable Fresh Other

Feature LandAerodrome (Area 00)

New ☐ Land Aerodrome

An aerodrome on land intended to be used either wholly or in part for the arrival, departure and surface movement of aircraft.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aerodrome Elevation	1	-999999	REAL	Metre	0	The vertical distance above Mean Sea Level (MSL) of the highest point of the landing area.
<i>allowed values:</i> -999999						
Aerodrome Official Name	1	No Information	String	Unitless	80	The primary official name of an aerodrome as designated by an appropriate authority.
<i>allowed values:</i> No Information						
Airfield Symbol Type	1	No Information	Enumeration	Unitless	0	The type of airfield symbol designation.
<i>allowed values:</i> A - Active Civilian E - Abandoned or Closed (with usable runways or landing areas) X - Decoy			B - Active Joint (Civilian/Military) F - Highway Strip			C - Active Military G - Unusable for landing or take-off D - Active (with less than the minimum facilities) No Information
Airfield Type	1	No Information	Enumeration	Unitless	0	The type of an airfield based on the size and/or paving of its runways.
<i>allowed values:</i> Major No Information			Minor Other			Minor and Hard Minor and Soft
Airfield Use	3	No Information	Enumeration	Unitless	0	The primary use(s) of an airfield.

allowed values: Emergency Major Airfield Parascending/Parasailing Site		Glider Site Microlight/Ultralight Site Search and Rescue Airfield		Hang Glider Site Minor Airfield Winch Launched Hang Glider Site		Light/General Aviation Aircraft Operating Only No Information
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
allowed values: Civilian National Public		International No Information State		Joint Military and Civilian Other		Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a facility, as a whole.
allowed values: No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational		Operational
New Feature Code	1	GB005	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: GB005						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values: No Information						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
allowed values: -999999						
ICAO Location Indicator	1	No Information	String	Unitless	14	The identifier that is assigned to a location in accordance with rules prescribed by the International Civil Aviation Organization (ICAO) in Document 7910. [Description] If available this indicator shall be used as primary for identification.
allowed values: No Information						
Installation Operator	1	No Information	String	Unitless	2E+09	The name of the company or authority operating an installation.
allowed values: No Information						
New Largest Aircraft	1	No Information	String	Unitless	254	The largest aircraft that has used the facility within the past five years.
allowed values: No Information						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
Magnetic Variation	1	-999999	Real	Arc Degree	0	The angular difference between True North and Magnetic North measured at a given position and date. [Description] The value given indicates whether the angular difference is East (positive) or West (negative) of True North. True North is the direction of the northern point at which the geographic meridian lines meet.
allowed values: -999999						
Magnetic Variation Date	1	No Information	Constrained_String	Unitless	20	The date on which the magnetic variation was measured.
allowed values: No Information						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						

New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.

<i>allowed values:</i> <i>No Information</i>							
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> <i>No Information</i>							

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature LandAerodrome (Point 00)

New ☐ Land Aerodrome

An aerodrome on land intended to be used either wholly or in part for the arrival, departure and surface movement of aircraft.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aerodrome Elevation	1	-999999	REAL	Metre	0	The vertical distance above Mean Sea Level (MSL) of the highest point of the landing area.
<i>allowed values:</i> -999999						
Aerodrome Official Name	1	No Information	String	Unitless	80	The primary official name of an aerodrome as designated by an appropriate authority.
<i>allowed values:</i> No Information						
Airfield Symbol Type	1	No Information	Enumeration	Unitless	0	The type of airfield symbol designation.
<i>allowed values:</i> A - Active Civilian E - Abandoned or Closed (with usable runways or landing areas) X - Decoy			B - Active Joint (Civilian/Military) F - Highway Strip			C - Active Military G - Unusable for landing or take-off D - Active (with less than the minimum facilities) No Information
Airfield Type	1	No Information	Enumeration	Unitless	0	The type of an airfield based on the size and/or paving of its runways.
<i>allowed values:</i> Major No Information			Minor Other			Minor and Hard Minor and Soft
Airfield Use	3	No Information	Enumeration	Unitless	0	The primary use(s) of an airfield.
<i>allowed values:</i> Emergency Major Airfield Parascending/Parasailing Site			Glider Site Microlight/Ultralight Site Search and Rescue Airfield			Hang Glider Site Minor Airfield Winch Launched Hang Glider Site Light/General Aviation Aircraft Operating Only No Information
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational

Feature LandingZone (Point 00)

New ☒ Landing Zone

An identified area for aircraft landing or the pick-up or drop-off of troops, equipment or supplies. [Description] This is usually an established site, and it is not to be used for features typically classified as runways, helipads, heliports or aerodromes. Varied types of aircraft may use this landing zone.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature LandSubjectToInundation (Area 00)

New ☐ Land Subject to Inundation

A tract periodically covered by flood water, excluding tidal waters.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999						
Average Water Depth	1	[-999999,-999999]	REAL_INTERVAL	Metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> [-999999,-999999]						
Controlled	1	No Information	Boolean	Unitless	0	An indication that a facility is controlled. [Description] For example, maritime traffic control.
<u>allowed values:</u> False			No Information			True
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<u>allowed values:</u> -999999						
New Feature Code	1	BH090	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> BH090						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<u>allowed values:</u> Conventional Other			Historical Transliterated Provisional			Native Transliterated Unverified Transliterated No Information Variant Transliterated
Hydrologic Persistence	1	No Information	Enumeration	Unitless		The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<u>allowed values:</u> Dry Perennial			Ephemeral			Intermittent No Information
Inundation Type	1	No Information	Enumeration	Unitless		The type of an inundation based on the cause of the flooding.
<u>allowed values:</u> Controlled			Natural			No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Predominant Maximum Water Depth	1	[-999999,-999999]	Real_Interval	Metre	0	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> (0.8, 1.6] [-999999,-999999]			(1.6, 2.4]			(2.4, INFINITY) (-INFINITY, 0.8]
Predominant Minimum Water Depth	1	[-999999,-999999]	Real_Interval	Metre	0	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.

allowed values: (0.8, 1.6] [-999999, -999999]			(1.6, 2.4]			(2.4, INFINITY)		(-INFINITY, 0.8]
Predominant Water Depth	1	[-999999, -999999]	Real_Interval	Metre			The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.	
allowed values: [-999999, -999999]			No Information

Feature LandWaterBoundary (Line 00)

New ☐ Land Water Boundary

The line where a land mass is in contact with a body of water and the tide state or river stage are unspecified. [Description] It may be in either the littoral or inland waters. In the littoral, consideration should be given to using the more specific high water or low water lines based on the nature of the source data collection.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
New Feature Code	1	BA010	CONSTRAINED_STRING	Unitless	5	Feature Code

Feature LaunchPad (Area 00)

New ☐ Launch Pad

A designated site or structure from which a rocket or missile is launched.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational						
			Non-operational Planned			Not in Operation Temporarily Non-operational
New Feature Code	1	GB040	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i> GB040						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.

<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information

Feature LaunchPad (Point 00)

New ☐ Launch Pad

A designated site or structure from which a rocket or missile is launched.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	GB040	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i> GB040						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i>	-999999					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). Feature Lighthouse (Point 00)

New ☐ Lighthouse

A distinctive structure on or off a coast exhibiting a major light designed to serve as an aid to navigation.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Attached Building	1	No Information	Boolean	Unitless	0	An indication that a building is physically contiguous (for example: shares a common wall) with one or more adjacent buildings.
<i>allowed values:</i> FALSE			No Information			TRUE
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BC050	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BC050						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Emergency Shelter Other Water Transport			Inland Waters Transport Pilot Station			Maritime Pilotage Rescue and Paramedical Services No Information Signalling
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Light Characteristic Number	1	-999999	Integer	Unitless		The number of flashes/occultations in a group flashing/occulting light character.
<i>allowed values:</i> -999999						
Maritime Navigation Marked	1	No Information	Boolean	Unitless	0	An indication that a feature is significant to maritime safety of navigation and is marked (for example: by a light or beacon) by a maritime-specific navigational aid. [Description] Mariners may also use other prominent features (for example: rotating aeronautical beacons or lighted structures) for informal navigational purposes.
<i>allowed values:</i> FALSE		No Information				TRUE
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False		No Information				True
Period of Light	1	-999999	Real	Second		The time occupied by an entire cycle of intervals of light and eclipse.
<i>allowed values:</i> -999999						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

	U.S. Transportation Command (USTRANSCOM)						
Restriction Information : Security Attributes Group (resource non-intelligence community markings)		1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information							
Restriction Information : Security Attributes Group (resource owner-producer)		1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information							
Roof Shape		3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
allowed values:	Conical			Domed			Flat
	Other			Pitched			No Information With Cupola
Specified Domain Values(s)		1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information							
Unique Entity Identifier		1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information							
Vertical Construction Material		3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
allowed values:	Brick			Concrete			Iron
	Masonry			Metal		Glass No Information	Other
	Prestressed Concrete			Reinforced Concrete		Steel	Stone
Vertical Obstruction Identifier		1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
allowed values: No Information							
Width		1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
allowed values:	No Information						
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.	
allowed values:	No Information						

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature LightVessel (Point 00)

New ☐ Light Vessel

A distinctively marked vessel anchored or moored at a charted point, to serve as an aid to navigation. [Description] By night, it displays a characteristic light(s) and is usually equipped with other devices (for example: a fog signal, a submarine sound signal, and/or a radio-beacon) to assist navigation.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Broadcast Frequency	1	-999999	Integer	Hertz		The transmission frequency of a radio communications device (for example: a television station or a radiobeacon).
<i>allowed values:</i> -999999						
Character of Light	1	No Information	Constrained_String	Unitless	254	The characteristic description of a maritime light or lights at one geographic position that includes its class, number and color(s) of flashes or occultations. [Description] This text is structured as it traditionally has been represented on a paper chart.
<i>allowed values:</i> No Information						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BC070	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BC070						
Fog Signal Type	1	No Information	Enumeration	Unitless		The type of a fog signal based on its signal characteristics and method of generation.
<i>allowed values:</i> Bell Horn Other			Diaphone No Information Reed			Explosive None Siren Gong Not Applicable Whistle
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Light Elevation	1	-999999	Real	Metre		The height of a light measured from a specified datum (for example: vertical or sounding), usually high water, as defined by the National agency. [Description] When used with a buoy the elevation is measured from the water surface; when used with a lighthouse the elevation is typically measured from ground level.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Multiple Light Ranges	1	No Information	Constrained_String	Unitless	254	A set of two numbers for light ranges of visibility (at a light) expressed in nautical miles.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False						
Navigation System Type	3	No Information	Enumeration	Unitless		The type(s) of equipment or system used in electronic navigation.
<i>allowed values:</i> Circular Radio Beacon None Radar Responder Beacon (RACON) Unspecified Radio Beacon						
Directional Radiobeacon Other Radar Station						
No Information QTG Station (R) Radio Direction Finding						
Non-Directional Radio Beacon (NDB) Radar Marker (RAMARK) Rotating Loop Radio Beacon						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained						
Destroyed Ruined						
Dismantled Site Preparation						
Intact Under Construction						
Primary Operating Range	1	-999999	Real	Nautical Mile		The primary range of the NAVAID beyond which the capture of the signal is not completely assured.
<i>allowed values:</i> -999999						
Radar Reflector Present	1	No Information	Boolean	Unitless	0	An indication that an object has an associated radar reflector.
<i>allowed values:</i> FALSE						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						

Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Second Broadcast Frequency	1	-999999	Integer	Hertz		The alternate or second transmission frequency of a radio communications device (for example: a television station, a radiobeacon). [Description] Used for additional, alternate, and/or backup transmissions.
allowed values:	-999999					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
allowed values:	No Information					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. Feature Lock (Area 00)

New ☐ Lock

An enclosure with a pair or series of gates used for raising or lowering vessels as they pass from one water level to another.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
allowed values: Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
allowed values: -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
allowed values: No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BI030	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: BI030						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values: No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
allowed values: -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
allowed values: -999999						
Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
allowed values: -999999						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.			
<i>allowed values:</i> -999999									
New Maximum Water Depth	1	-999999	Real	Metre		Maximum water depth the object was designed to hold.			
<i>allowed values:</i> -999999									
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.			
<i>allowed values:</i> No Information									
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.			
<i>allowed values:</i> No Information									
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.			
<i>allowed values:</i> False			No Information			True			
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.			
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation		Intact Under Construction	
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.			
<i>allowed values:</i> U									
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.			
<i>allowed values:</i>									

Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Brick Concrete Masonry No Information Other Prestressed Concrete Reinforced Concrete Soil Steel Stone Treated Timber Wood						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Usable Length	1	-999999	REAL	Metre	0	The interior length of a structure (for example: an aircraft bunker or a lock). [Description] The length is taken along the primary alignment of the structure. If the structure is irregular in shape the length is along its greatest horizontal dimension, else if the structure is regular in shape then a shape-specific rule may apply: for a rectangular structure, the length of the longer axis; for a round structure, the diameter.
<i>allowed values:</i> -999999						
Usable Width	1	-999999	REAL	Metre	0	The interior width of a structure. [Description] For example, an aircraft bunker or a lock.
<i>allowed values:</i> -999999						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
