

Features, Attributes, Defaults, Domains, Relationships

This report lists features by given name, label and type. It includes the feature definition, and provides a complete list of the attributes assigned to the feature, each with the default value (if assigned), attribute definition and value domain. Finally, relationships in which this feature participates are described.

AGDM v2.1 Draft v2_1draft

AdministrativeBoundary (Line 00)

Feature AdministrativeBoundary (Line 00)

New ☐ Administrative Boundary

A boundary between administratively controlled regions.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
BGN Administrative Level	1	No Information	Enumeration	Unitless	0	The level of an administrative division of a country as established by the U.S. Board on Geographic Names (BGN). [Description] The BGN is a management body established to maintain uniform geographic name usage throughout the U.S. Government.
<i>allowed values:</i>			No Information			Other
First-order						Second-order
Third-order						
Boundary Dispute Type	1	No Information	Enumeration	Unitless	0	The type of dispute, if any, concerning a boundary.
<i>allowed values:</i>			De Jure			In Dispute
De Facto						No Information
Undisputed						
Boundary Representation Policy	1	No Information	Enumeration	Unitless	0	An official (for example: by a State Department or Foreign Office) interpretation of a boundary status to be reflected in the portrayal of that boundary.
<i>allowed values:</i>			Definite			In Dispute
Administrative as International						Indefinite
No Information			Other			Show No Line
Boundary Status	1	No Information	Enumeration	Unitless	0	The status of delimitation of a boundary.
<i>allowed values:</i>			In Dispute			Indefinite
Definite						No Defined Boundary
No Information						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i>			Insular			International
Civilian						Joint Military and Civilian
Military			Municipal			No Information
Other			Private			State
Tribal						
New Feature Code	1	FA000	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i>						FA000
Geopolitical Entity : Geographic Name Information (1) : Full Name (first side)	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i>			No Information			
<i>allowed values:</i>			No Information			
Geopolitical Line Type	1	No Information	Enumeration	Unitless	0	The type of a geopolitical dividing line (for example: a boundary or a line of separation) based on the nature of its establishment and/or recognition.
<i>allowed values:</i>			Cease Fire Line			Claim Line
Armistice Line			Generic Administrative Boundary			Convention Line
Demarcation Line			Line of Adjacency			Intercolonial Line
Interentity Line			Military Disengagement Line			Line of Convenience
Line of Withdrawal			Treaty Line			No Information
Provisional Administrative Line						UNCLOS Claim Boundary
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i>			Accurate			Doubtful
			Approximate			No Information

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
Maritime Geopolitical Limit Type	3	No Information	Enumeration	Unitless	0	The type of a maritime geopolitical dividing line (limit) based on the nature of its establishment and/or recognition. [Description] Generally established and recognized in accordance with International Law (for example: the United Nations Convention on the Law of the Sea (UNCLOS)).
allowed values: Contiguous Zone Limit Extended Continental Shelf Limit Territorial Sea Baseline			Continental Shelf Limit International Boundary Territorial Waters Limit of Sovereignty			Customs Boundary No Information Three Nautical Mile Limit Exclusive Economic Zone Limit Other
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geopolitical Entity : Geographic Name Information (1) : Name Identifier (first side)	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
allowed values: No Information						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values: Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)			Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)			Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM) Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
----------------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Feature AdministrativeDivision (Area 00)

New ☐ Administrative Division

A subordinate administrative division (for example: a (US) state, a (UK) county, a (US) township, a (CA) province, a (FR) arrondissement, a (CH) canton, a (GE) laender and a (FR) commune) of a geopolitical entity (for example: a State). [Description] Geopolitical entities are generally divided into first-, second- and lower-order administrative divisions. With only minor exceptions (for example: Egypt-Sudan and Kenya-Sudan), the boundaries of these administrative divisions are contiguous with international boundaries. In rarer instances, the boundaries of these administrative divisions serve in lieu of international boundaries (for example: Ethiopia-Somalia and the former Oman-UAE boundaries).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.

allowed values: -999999

BGN Administrative Level	1	No Information	Enumeration	Unitless	0	The level of an administrative division of a country as established by the U.S. Board on Geographic Names (BGN). Feature AerationBasin (Area 00)New ☐ Aeration Basin

A basin, usually artificial, in which air is mixed with partially treated wastewater. [Description] The water is treated with microorganisms to consume organic materials and convert suspended solids to settleable solids that are later collected by a settling pond and removed as sludge.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999						
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information			Non-operational	Not in Operation		
<i>Partially Operational</i>			Planned	Temporarily Non-operational		
				<i>Operational</i>		
New Feature Code	1	AB040	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AB040						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
New Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.

<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False			No Information		True	
New Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<u>allowed values:</u> -999999						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<u>allowed values:</u> Damaged No Information Unmaintained			Destroyed Ruined		Dismantled Site Preparation Intact Under Construction	
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<u>allowed values:</u> Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)						
Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)

Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)						
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<u>allowed values:</u> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<u>allowed values:</u> No Information						

Specified Domain Values(s)							1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<u>allowed values:</u> No Information												
New	Water Resource Information : Sulfate Concentration		1	-999999	Real	Milligrams per Litre						The mass of sulfate ions per volume of solution.
<u>allowed values:</u> -999999												
New	Water Resource Information : Temperature		1	-999999	Real	Degree Celsius						The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<u>allowed values:</u> -999999												
New	Water Resource Information : Total Dissolved Solids		1	-999999	Real	Milligrams per Litre						The total mass of dissolved inorganic chemical constituents per volume of solution.
<u>allowed values:</u> -999999												
New	Water Resource Information : Turbidity		1	-999999	Real	Nephelometric Turbidity Units						The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<u>allowed values:</u> -999999												
Unique Entity Identifier							1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<u>allowed values:</u> No Information												
Volume							1	-999999	REAL	Cubic Metre		The volume of a feature. [Description] For example, the storage capacity of a water tower.
<u>allowed values:</u> -999999												
New	Water Resource Information : Water Conductivity		1	-999999	Real	MicroSiemens per Centime						The electrical conductivity of water.
<u>allowed values:</u> -999999												
New	Water Resource Information : Water Hardness		1	-999999	Real	Milligrams per Litre						The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
<u>allowed values:</u> -999999												
Water Resource Information : Water Type							1	No Information	Enumeration	Unitless		The type of available water based on its composition.
<u>allowed values:</u> Alkaline Mineral Saline									Brackish No Information Seawater	Brine Not Applicable		Fresh Other
Width							1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Aerial (Point 00)New ☐ Aerial

A device that is used for emitting and/or sensing electromagnetic energy. [Description] For example, used to transmit and/or receive electronic signals as on a radio tower or to capture electromagnetic energy as in radio astronomy.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Military Other Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AT011	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AT011						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
<i>allowed values:</i> False			No Information			True

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
---------------------------------	---	----------------	--------	----------	----	---

allowed values: No Information

Wireless Telecommunication Information : Wireless Telecommunication Type	1	No Information	Enumeration	Unitless	0	The type of a wireless telecommunication service based on the mechanism(s) of transmission and/or the nature of the communication(s) supported. [Description] For example, radio broadcast or mobile phone service.
--	---	----------------	-------------	----------	---	---

Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<i>allowed values:</i>	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature AerodromeBeacon (Point 00)

New ☐ Aerodrome Beacon

A beacon used to indicate the location of an aerodrome from the air. [Description] Aerodrome beacons may consist of either a rotating light source or a strobe light.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aerodrome : Aerodrome Identifier	1	No Information	String	Unitless	14	The unique identifier of an aerodrome, heliport or seaplane base. [Description] It may used to relate information about components (for example: runways, helipads, taxiways, and aprons) of the aerodrome, heliport or seaplane base to each other and to the overall facility.
allowed values: No Information						
Character of Light	1	No Information	String	Unitless	80	The characteristic description of a maritime light or lights at one geographic position that includes its class, number and color(s) of flashes or occultations. [Description] This text is structured as it traditionally has been represented on a paper chart.
allowed values: No Information						
Conspicuous Sea Category	1	No Information	Enumeration	Unitless	0	The manner in which an object is conspicuous when viewed from the sea. [Description] A conspicuous feature is easily detected and identified under varying conditions (for example: lighting). Factors affecting conspicuousness include size, shape, and/or height.
allowed values: No Information Visual and Radar			Not Conspicuous			Radar Visual
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
allowed values: Civilian Other			Joint Military and Civilian Private			Military Public No Information
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a facility, as a whole.
allowed values: No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	GB013	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: GB013						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values: No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.

<u>allowed values:</u> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Light Characteristic Number	1	-999999	Integer	Unitless	0	The number of flashes/occultations in a group flashing/occulting light character.
<u>allowed values:</u> -999999						
Light Visibility	3	No Information	Enumeration	Unitless	0	The type of specific visibilities of a light based on the light's intensity and ease of recognition.
<u>allowed values:</u> Faint No Information Unintensified			High Intensity Obscured Visibility Deliberately Restricted			Intensified Other Low Intensity Partially Obscured
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Light Characteristic	1	No Information	Enumeration	Unitless	0	The sequence, grouping, and/or distinctive character (rythm and colour or colours) of a navigation light.
<u>allowed values:</u> Alternating Fixed with Alternating Flashing Group Quick-flashing Interrupted Very Quick-flashing Morse Code Occulting Flashing Ultra Quick-flashing with Long-flash			Fixed Flashing Group Very Quick-flashing Isophase No Information Quick-flashing Very Quick-flashing			Fixed and Flashing Flashing Alternating Interrupted Quick-flashing Long-flashing Occulting Quick-flashing with Long-flash Very Quick-flashing with Long-flash Fixed Long-flashing Flashing with Long-flash Interrupted Ultra Quick-flashing Long-flashing Alternating Occulting Alternating Ultra Quick-flashing
Period of Light	1	-999999	REAL	Second	0	The time occupied by an entire cycle of intervals of light and eclipse.
<u>allowed values:</u> -999999						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<u>allowed values:</u> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature AeroNavaid (Point 00)New ☐ Aeronautical NAVAID**Any visual or electronic device that provides aeronautical guidance information or position data.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
-----------	-------------	---------	-----------	-------	--------	----------------------

Aerodrome : Aerodrome Identifier	1	No Information	String	Unitless	14	The unique identifier of an aerodrome, heliport or seaplane base. [Description] It may used to relate information about components (for example: runways, helipads, taxiways, and aprons) of the aerodrome, heliport or seaplane base to each other and to the overall facility.
<u>allowed values:</u> No Information						
Aeronautical Miscellaneous Function Category	1	No Information	Enumeration	Unitless	0	Miscellaneous aeronautical functions not belonging to other categories.
<u>allowed values:</u> Decoy			No Information		Terminus/Terminal	
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<u>allowed values:</u> False			No Information		True	
Aeronautical Radio Navigation Service Name	1	No Information	String	Unitless	80	The textual designation given to a feature by a responsible authority.
<u>allowed values:</u> No Information						
Aeronautical Route Category	1	No Information	Enumeration	Unitless	0	The category of aeronautical route with which a waypoint or NAVAID is associated.
<u>allowed values:</u> Both			High		Low No Information	
Aeronautical Service Operational Status	1	No Information	Enumeration	Unitless	0	The availability of an aeronautical navigation or communication service, as a category.
<u>allowed values:</u> Conditional In Construction Limited Unreliable			Displaced Intermittent No Information Unserviceable		False Indication Definite Interrupt On-Test Withdrawn False Indication Possible Irregular Operational	
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<u>allowed values:</u> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999						
Base Elevation	1	-999999	REAL	Metre	0	The vertical distance from a specified vertical datum to the terrain surface of or at the base of the feature. [Description] If the feature is not supported above the surface by another feature then the base of the feature is usually located at ground or water level on the downhill/downstream side. For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). In the case of a survey marker (monument) this is usually the elevation assigned to the marker (monument).
<u>allowed values:</u> -999999						
Broadcast Frequency	1	-999999	Integer	Hertz	0	The transmission frequency of a radio communications device (for example: a television station or a radiobeacon).
<u>allowed values:</u> -999999						
Channel Number	1	-999999	Integer	Unitless	0	The channel representing the frequency assigned by the controlling authority.
<u>allowed values:</u> -999999						
Characters Emitted	1	No Information	String	Unitless	80	The character(s) that are being emitted by a signalling device (for example: a light, a beacon, or a communications transmitter). [Description] May be in the form of Morse code, however on 1 February 1999 Morse code was withdrawn from use and was replaced by the Global Maritime Distress and Safety System.
<u>allowed values:</u> No Information						
Collection	1	No Information	Boolean	Unitless	0	An indication that a feature instance is, or may be, representing more than a single feature of the same type as a collection. [Description] May be used when delineating individual features of the same type within a region that may or may not meet inclusion conditions to be delineated individually. For example, the Finger Lakes in North America is a collection of (multiple) Lake features but may be collected as a single feature instance at a small extraction scale.
<u>allowed values:</u> False			No Information		True	
Commissioned Status	1	No Information	Enumeration	Unitless	0	The status of a facility based on test, operation, and commissioning.
<u>allowed values:</u> Commissioned and on Test Not Commissioned and Out of Service			Commissioned and Operational On Test but Not Commissioned		Commissioned but Out of Service Operational but Not Commissioned No Information	

DIAM Functional Classification	1	No Information	String	Unitless	14	The functional classification code for facilities as specified by DIA Manual (DIAM) 65-3-1 and encoded by the data element CATEGORY as required by DoD Directive 5105.21. [Description] Function classification codes provide a hierarchical structure for defining the detailed purpose of a facility. The Joint Chiefs of Staff (JCS) defines a facility as 'a real property performing a unique function and consisting of one or more of the following components: buildings, structures or equipment', for example: storage tanks or a pumping house. The JCS defines an installation as 'a group of facilities, or facility, in a specific geographic area which support a general functional purpose', for example: a petroleum production plant composed of all of its associated refining operations, blending operations, pumping houses and storage tanks all located within the fence line of the petroleum plant.
<i>allowed values:</i> No Information						
Directivity	1	No Information	Enumeration	Unitless	0	The side(s) of a feature that produce the greatest visual significance and/or reflectivity potential.
<i>allowed values:</i> Bidirectional			<i>No Information</i>			Omnidirectional Unidirectional
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	GA035	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i> GA035						
Feature Count	1	-999999	Integer	Unitless	0	The number of features of the same type within a defined region. [Description] May be used to indicate the number of features actually present in near proximity to each other although only one representative feature is collected. For example, the number of adjacent pipelines.
<i>allowed values:</i> -999999						
Frequency Protection Altitude	1	-999999	Integer	TBD	0	The altitude within which frequency reception is assumed to be interference-free.
<i>allowed values:</i> -999999						
Frequency Protection Distance	1	-999999	Integer	TBD	0	The distance within which frequency reception is assumed to be interference-free.
<i>allowed values:</i> -999999						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Glide Slope Angle	1	-999999	REAL	Arc Degree	0	Glide slope angle in degrees.
<i>allowed values:</i> -999999						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
ICAO Location Indicator	1	No Information	String	Unitless	14	The identifier that is assigned to a location in accordance with rules prescribed by the International Civil Aviation Organization (ICAO) in Document 7910. [Description] If available this indicator shall be used as primary for identification.
<i>allowed values:</i> No Information						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Location Referenced to Shoreline	1	No Information	Enumeration	Unitless	0	The location of an object in relation to a land water boundary.

			Inland			No Information	Offshore
allowed values:	At Shoreline						
Magnetic Variation	1	-999999	REAL	Arc Degree	0	The angular difference between True North and Magnetic North measured at a given position and date. [Description] The value given indicates whether the angular difference is East (positive) or West (negative) of True North. True North is the direction of the northern point at which the geographic meridian lines meet.	
allowed values:	-999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
allowed values:	No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
allowed values:	No Information						
NAVAID Class	1	No Information	Enumeration	Unitless	0	Classification of NAVAIDS in terms of altitude, distance, and transmission power. [Description] Indicates normal altitude/range combinations for interference-free service.	
allowed values:	High Power NDB No Information		Low Power Compass Locator Normal anticipated interference-free service below 18,000 feet - 40NM; 14,500-17,999 feet - 100NM (contiguous 48 states only); 18,000 feet to FL450 - 130NM; above FL450 -100NM			Low Power NDB Normal anticipated interference-free service, 25NM up to 12,000 feet	Medium Power NDB Normal anticipated interference-free service, 40NM up to 18,000 feet
NAVAID Key	1	-999999	Integer	Unitless	0	System generated key to distinguish between same type NAVAIDS with same IDENT and same country code.	
allowed values:	-999999						
NAVAID Power	1	-999999	Integer	TBD	0	NAVAID facility radiated power.	
allowed values:	-999999						
Navigation System Type	3	No Information	Enumeration	Unitless	0	The type(s) of equipment or system used in electronic navigation.	
allowed values:	Airport Surveillance Radar (ASR) Localizer (LOC) Back Course Marker Long Range Air Navigation System (LORAN) Microwave Landing System (MLS) Elevation Other Radar Unspecified Radio Beacon		Distance Measuring Equipment (DME) Localizer (LOC) with Distance Measuring Equipment (DME) (LOC/DME) Marker Radio Beacon (MKR) No Information Outer Marker (OM) Radar Antenna VHF Omnidirectional Radio Beacon (VOR)			Fan Marker (FM) Locator Middle Marker (LMM) Microwave Landing System (MLS) Non-Directional Radio Beacon (NDB) PAR Touchdown Reflector Simplified Directional Facility (SDF) VHF Omnidirectional Radio Beacon (VOR) with Distance Measuring Equipment (DME) (VOR/DME)	Localizer (LOC) Locator Outer Marker (LOM) Microwave Landing System (MLS) Azimuth Non-Directional Radio Beacon (NDB) with Distance Measuring Equipment (DME) (NDB/DME) Precision Approach Radar (PAR) Tactical Air Navigation Aid (TACAN) VHF Omnidirectional Radio Beacon (VOR) with Tactical Air Navigation Aid (TACAN) (VORTAC)
Permanent	1	No Information	Boolean	Unitless	0	An indication that a feature is permanent. [Description] Temporary features last, or are meant to last, for a limited time only.	
allowed values:	FALSE		No Information			TRUE	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.	
allowed values:	Damaged No Information Unmaintained		Destroyed Ruined			Dismantled Site Preparation	Intact Under Construction
Primary Operating Range	1	-999999	REAL	Nautical Mile	0	The primary range of the NAVAID beyond which the capture of the signal is not completely assured.	
allowed values:	-999999						
Radar Antenna Configuration	1	No Information	Enumeration	Unitless	0	The physical mounting and/or configuration of a radar antenna.	
allowed values:	Dome Enclosed Radome on Tower		No Information Tower Mounted			Other	Radome
Radar Significance	1	No Information	Enumeration	Unitless	0	The predominant exposed surface material, categorized by its significance to radar-based sensors.	
allowed values:	Composition No Information		Earthen Other			Masonry Part Metal	Metal
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	

allowed values: U

Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<u>allowed values:</u>	<div> Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM) </div> <div> Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM) </div> <div> Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM) </div> <div> Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM) </div>					
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<u>allowed values:</u> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<u>allowed values:</u> No Information						
Runway Direction : Runway Designator	1	No Information	String	Unitless	14	The designator of the runway that is used to uniquely identify it at an aerodrome. [Description] This may be used to identify either both directions of the runway (for example: '09/27' or '02R/20L') or one direction independently (for example: '27', '35L', '01R').
<u>allowed values:</u> No Information						
Slaved Variation	1	-999999	REAL	TBD	0	A fixed value of magnetic declination applied within an aid to navigation to the true direction in order to obtain the reported magnetic directions for radials, courses and headings. [Description] The value is fixed for a period of time and therefore may differ from the true declination due to subsequent drift of the Earth's magnetic field.
<u>allowed values:</u> -999999						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<u>allowed values:</u> No Information						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<u>allowed values:</u>	<div> Aluminum Iron Steel </div> <div> Ceramic Metal </div> <div> Concrete No Information </div> <div> Glass Reinforced Plastic (GRP) Other </div>					
Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
<u>allowed values:</u> False						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

allowed values: No Information

Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
---------------------------------	---	----------------	--------	----------	----	---

allowed values: No Information

Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
----------------------------	---	----------------	-------------	----------	---	---

allowed values: Above Surface

No Information

On Surface

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<u>allowed values:</u> False			No Information			True
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<u>allowed values:</u> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999						
New Attached Building	1	No Information	Boolean	Unitless	0	An indication that a building is physically contiguous (for example: shares a common wall) with one or more adjacent buildings.
<u>allowed values:</u> FALSE			No Information			TRUE
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<u>allowed values:</u> Civilian National State			International No Information			Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<u>allowed values:</u> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	GB230	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> GB230						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.

<i>allowed values:</i>	Air Transport Dormitory No Information		Aircraft Repair Emergency Operations Other			Cargo Handling Emergency Shelter Out-patient Care	Dining Hall Meeting Place Warehousing and Storage
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.	
<i>allowed values:</i>	No Information						
Hangar Type Category	1	No Information	Enumeration	Unitless	0	Hangar design code.	
<i>allowed values:</i>	D - Double Bay No Information		G - Underground O - Open End			M - Multi-bay S - Single Bay	N - Nose In T - T-Shaped
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.	
<i>allowed values:</i>	-999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.	
<i>allowed values:</i>	-999999						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.	
<i>allowed values:</i>	Accurate		Approximate			Doubtful	No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<i>allowed values:</i>	-999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i>	No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i>	No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.	
<i>allowed values:</i>	False		No Information			True	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.	
<i>allowed values:</i>	Damaged No Information Unmaintained		Destroyed Ruined			Dismantled Site Preparation	Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
<i>allowed values:</i>	U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

[Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
allowed values:	Adobe Brick Metal Reinforced Concrete		Brick No Information Steel		Concrete Other Wood	Masonry Prestressed Concrete
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
allowed values:	No Information					

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature AircraftRevetment (Line 00)

New ☐ Aircraft Revetment

A barricade that protects an aircraft, equipment, and/or facility from hostile action.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Delineation Known	1	No Information	Boolean	Unitless	0	An indication that the delineation (for example: limits and information) of a feature is known.
<i>allowed values:</i> FALSE			No Information			TRUE
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	GB050	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> GB050						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i>	-999999					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i>	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i>	No Information					
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i>	Damaged No Information Unmaintained					Destroyed Ruined Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i>	U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature Amphitheatre (Area 00)

New ☐ Amphitheatre

A small tract of level ground serving as a stage that is surrounded by rising slopes (either naturally occurring or artificially constructed) supporting tiered seating (for example: benches). [Description] Generally oval or circular in overall shape and typically used for live theatrical presentations, concerts, opera or dance productions, cinema, and/or other stage productions.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition

Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.	
<i>allowed values:</i>	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)		Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.	
<i>allowed values:</i> No Information							
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.	
<i>allowed values:</i> No Information							
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.	
<i>allowed values:</i> No Information							
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
<i>allowed values:</i> No Information							
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values: False			No Information			True

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter. <i>allowed values:</i> -999999
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length. <i>allowed values:</i> No Information
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information. <i>allowed values:</i> No Information
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air. <i>allowed values:</i> False No Information True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.

<i>allowed values:</i> <i>Damaged</i> No Information <i>Unmaintained</i>			<i>Destroyed</i> <i>Ruined</i>			<i>Dismantled</i> <i>Site Preparation</i>	<i>Intact</i> <i>Under Construction</i>
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
<i>allowed values:</i> <i>U</i>							
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.	
<i>allowed values:</i>	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)		Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.	
<i>allowed values:</i> No Information							
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.	
<i>allowed values:</i> No Information							
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.	
<i>allowed values:</i> No Information							
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
<i>allowed values:</i> No Information							
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.	
<i>allowed values:</i> No Information							

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature AmusementParkAttraction (Line 00)

New ☐ Amusement Park Attraction

A large structure located in an amusement park.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Amusement Attraction Type	1	No Information	Enumeration	Unitless	0	The type of an amusement park attraction based on its geometric form, appearance, configuration, and/or use.
<i>allowed values:</i> Artificial Mountain Roller-coaster			Ferris Wheel Spherical			No Information Vertical Ride Other Water Attraction
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AK020	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i> AK020						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Feature AnnotatedLocation (Area 00) New ☐ Annotated Location

A location at which text pertaining to that location is annotated. [Description] For example, a characteristic or activity pertaining to the location may be described.

	Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
New	Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
	<i>allowed values:</i> -999999						
	Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<i>allowed values:</i> [-999999, -999999]			No Information			
New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999						
New	Feature Code	1	ZD045	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> ZD045						
	Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
	Geographic Name Type	3	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Other			Historical Transliterated Provisional			Native Transliterated Unverified Transliterated No Information Variant Transliterated
	Hydrologic Persistence	1	No Information	Enumeration	Unitless		The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<i>allowed values:</i> Dry Perennial			Ephemeral			Intermittent No Information
New	Least Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.

<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
New Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<u>allowed values:</u> -999999						
Predominant Average Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average water velocity, exclusive of high water due to runoff or low water due to drought.
<u>allowed values:</u> [-999999, -999999]			No Information			
Predominant Maximum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> [-999999, -999999]			No Information			
Predominant Maximum Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.
<u>allowed values:</u> [-999999, -999999]						
Predominant Minimum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> [-999999, -999999]			No Information			
Predominant Minimum Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average minimum (seasonal low water) water velocity, exclusive of high water due to runoff or low water due to drought.
<u>allowed values:</u> [-999999, -999999]						
Predominant Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> [-999999, -999999]			No Information			
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
	<u>allowed values:</u> No Information						
	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
	<u>allowed values:</u> No Information						
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
	<u>allowed values:</u> No Information						
New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<u>allowed values:</u> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<u>allowed values:</u> No Information						
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<u>allowed values:</u> -999999						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless		The potability of water based on the type of treatment required before it is safe for human consumption.
	<u>allowed values:</u> Contaminated Potable			No Information Treatable		Nonpotable	Other
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.
	<u>allowed values:</u> Alkaline Mineral Saline			Brackish No Information Seawater		Brine Not Applicable	Fresh Other

Feature AnnotatedLocation (Line 00) New ☐ Annotated Location

A location at which text pertaining to that location is annotated. [Description] For example, a characteristic or activity pertaining to the location may be described.

	Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
New	Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
	<i>allowed values:</i> -999999						
	Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<i>allowed values:</i> [-999999, -999999]			No Information			
New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999						
New	Feature Code	1	ZD045	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> ZD045						
	Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
	Geographic Name Type	3	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Other			Historical Transliterated Provisional			Native Transliterated Unverified Transliterated No Information Variant Transliterated
	Hydrologic Persistence	1	No Information	Enumeration	Unitless		The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<i>allowed values:</i> Dry Perennial			Ephemeral			Intermittent No Information
New	Least Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.

<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
New Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<u>allowed values:</u> -999999						
Predominant Average Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average water velocity, exclusive of high water due to runoff or low water due to drought.
<u>allowed values:</u> [-999999, -999999]			No Information			
Predominant Maximum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> [-999999, -999999]			No Information			
Predominant Maximum Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.
<u>allowed values:</u> [-999999, -999999]						
Predominant Minimum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> [-999999, -999999]			No Information			
Predominant Minimum Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average minimum (seasonal low water) water velocity, exclusive of high water due to runoff or low water due to drought.
<u>allowed values:</u> [-999999, -999999]						
Predominant Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> [-999999, -999999]			No Information			
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
	<u>allowed values:</u> No Information						
	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
	<u>allowed values:</u> No Information						
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
	<u>allowed values:</u> No Information						
New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<u>allowed values:</u> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<u>allowed values:</u> No Information						
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<u>allowed values:</u> -999999						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless		The potability of water based on the type of treatment required before it is safe for human consumption.
	<u>allowed values:</u> Contaminated Potable			No Information Treatable		Nonpotable	Other
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.
	<u>allowed values:</u> Alkaline Mineral Saline			Brackish No Information Seawater		Brine Not Applicable	Fresh Other

Feature Apron (Area 00)New ☐ Apron

A defined area, on a land aerodrome/heliport, intended to accommodate aircraft/helicopters for purposes of loading and unloading passengers, mail or cargo, and for fuelling, parking or maintenance.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aerodrome Pavement Information : Aerodrome Movement Area Surface Category	1	No Information	Enumeration	Unitless	0	The level of preparation of the aerodrome movement area surface, as a category. [Description] Common category types may range from natural to completely paved.
allowed values: Completely Paved Partially Paved			Mostly Paved Unpaved			No Information Unprepared Other
Aerodrome Pavement Information : Aerodrome Movement Area Surface Composition	3	No Information	Enumeration	Unitless	0	The type of the predominant material of which a surface of the movement area is composed. [Description] Example surfaces include: asphalt, concrete, or grass.
allowed values: Asphalt Clay Gravel Macadam Other Stone			Asphalt Over Concrete Concrete Ice Membrane Pierced Steel Planking Water			Bituminous Mix Coral Landing Mat No Information Sand Wood Brick Earthen Laterite Non-bituminous Mix Snow
Aerodrome Pavement Information : Aerodrome Movement Area Surface Preparation Method	3	No Information	Enumeration	Unitless	0	The preparation technique(s) applied to a surface composition.
allowed values: Aggregate Seal Coat No Information Rolled			Graded Oiled Rubberized Seal Coat			Grass Other Grooved Porous Friction Course
Aerodrome Pavement Information : Aerodrome Pavement Functional Status	1	No Information	Enumeration	Unitless	0	The functional status of the pavement of an aerodrome movement area. [Description] An aerodrome movement area is that part of an aerodrome to be used for aircraft movement operations, consisting of the manoeuvring area and the apron(s).
allowed values: Fair No Information Unserviceable			Fair Estimated Poor			Good Poor Estimated Good Estimated Under Construction
Aerodrome Surface Status	1	No Information	Enumeration	Unitless	0	The operational status of an aerodrome movement area, as a category. [Description] For example: serviceable, unserviceable, closed, or work-in-progress.
allowed values: Closed Work in Progress			No Information			Open Parked or Disabled Aircraft
Apron Type	1	No Information	Enumeration	Unitless	0	The type of an apron based upon its location on an aerodrome and its general purpose.
allowed values: Cargo Military Remote Parking			Dispersal No Information Services and/or Hangar			General Aviation Other Holding Passenger
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.

<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational						
			Non-operational Planned			Not in Operation Temporarily Non-operational
New Feature Code	1	GB015	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> GB015						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained						
			Destroyed Ruined			Dismantled Site Preparation
						Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

------------------------	--	---	--	---

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature AquaticVegetation (Area 00)

New ☐ Aquatic Vegetation

A region of waterborne cellular or vascular plants (for example: algae, grasses, reeds, and water hyacinths). [Description] The vegetation may moored (for example: sea grass and reeds) or floating (for example: sargasso and water hyacinths).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aquatic Vegetation Cover	1	-999999	REAL	Percent	0	The portion of a waterbody surface area that is covered by aquatic vegetation.
<i>allowed values:</i> -999999						
Aquatic Vegetation Growth Habit	1	No Information	Enumeration	Unitless	0	The growth pattern, location and/or habit of aquatic vegetation.
<i>allowed values:</i> Emergent Submerged			Free-floating Waterlogged			No Information Other
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Hydrographic Vertical Positioning Information : Sounding Metadata : Bathymetric Measurement Quality Category	3	No Information	Enumeration	Unitless	0	A general evaluation of the qualities of a bathymetric measurement, as a category. [Description] Drying heights are typically captured using negative (bathymetric) sounding values; their certainty of measurement may be categorized in the same manner as positive values.
<i>allowed values:</i> Depth Doubtful Least Depth Not Applicable Unconfirmed Depth			Depth Known Maintained Depth Other Unmaintained Depth			Depth Unknown No Bottom Reported Depth Depth Unreliable No Information Safe Clearance Known
Hydrographic Vertical Positioning Information : Bathymetric Measurement Technique	3	No Information	Enumeration	Unitless	0	The technique used to determine water depth(s).
<i>allowed values:</i> Area Swept by Side-scan Sonar Computer Generated Lead-line Other Singlebeam			Area Swept by Vertical Acoustic System Diver Levelling Photogrammetry Underwater Utility Vehicle			Area Swept by Wire-drag Echo Sounder Multi-beam Echo Sounder Satellite Imagery Bathymetric LiDAR Electromagnetic Sensor No Information Side-scan Sonar
Dangerous to Navigation	1	No Information	Boolean	Unitless	0	An indication that a hazard in a waterbody is considered to be dangerous to surface navigation. [Description] For example, broken piles, a rock formation, or a reef in moderately deep waters. For large vessels a depth of less than 20 metres is generally considered to be dangerous.
<i>allowed values:</i> False			No Information			True
Hydrographic Vertical Positioning Information : Depth Exposition	1	No Information	Enumeration	Unitless	0	Indicates specific depths governed by IHO regulations used in indicating safe navigation, as categories.
<i>allowed values:</i> Covered < 20 metres			Covered >= 20 metres but < 30 metres			Covered >= 30 metres No Information
Hydrographic Vertical Positioning Information : Elevation Above Waterbody Floor	1	-999999	REAL	Metre	0	The elevation of an object measured vertically from the waterbody floor to the base (lowest point) of the object.
<i>allowed values:</i> -999999						
New Feature Code	1	BD061	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BD061						
Floating	1	No Information	Boolean	Unitless	0	An indication that an object is floating.
<i>allowed values:</i> False			No Information			True
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

Hydrographic Vertical Positioning Information : Height Above Waterbody Floor	1	-999999	REAL	Metre	0	The height of an object measured vertically from the waterbody floor to the top (highest point) of the object.
<u>allowed values:</u> -999999						
Hydrographic Vertical Positioning Information : Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<u>allowed values:</u> -999999						
Human Hazard	1	No Information	Enumeration	Unitless	0	The type(s) of a possible danger to human activity (for example: slipping) which may be present due to naturally occurring conditions (for example: algae covered rocks).
<u>allowed values:</u> Abrasion No Information			Biological Other			Drowning Puncture Entanglement Slipping
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999	REAL	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<u>allowed values:</u> -999999						
Hydrographic Vertical Positioning Information : Hydrographic Drying Height	1	-999999	REAL	Metre	0	The height of the feature, which tidal waters cover and uncover, referenced to a specified sounding datum.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Hydrographic Vertical Positioning Information : Maritime Navigation Marked	1	No Information	Boolean	Unitless	0	An indication that a feature is significant to maritime safety of navigation and is marked (for example: by a light or beacon) by a maritime-specific navigational aid. [Description] Mariners may also use other prominent features (for example: rotating aeronautical beacons or lighted structures) for informal navigational purposes.
<u>allowed values:</u> FALSE			No Information			TRUE
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Hydrographic Vertical Positioning Information : Sounding Metadata : Sounding Datum Name	1	No Information	String	Unitless	80	The name of the tidal datum to which soundings and drying heights are referenced. [Description] Used when the sounding datum is known but not specified using Attribute: 'Sounding Datum'.
allowed values:	No Information					
Hydrographic Vertical Positioning Information : Sounding Metadata : Sounding Velocity Correction Method	1	No Information	Enumeration	Unitless	0	The method of correction that has been used to correct a sounding velocity instrument reading to obtain the correct depth.
allowed values:	Mathews Tables Sound Velocity Meter		No Information Souder 1500 Calibrated		Not Applicable Souder 4800 Calibrated	Other Souder Other Calibrated

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Hydrographic Vertical Positioning Information : Uncovering Height Known	1	No Information	Boolean	Unitless	0	An indication that information is known about the height to which a marine feature may be uncovered by the tide.
<i>allowed values:</i> FALSE No Information TRUE						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Vegetation Species	3	No Information	Enumeration	Unitless	0	The predominant species of a tract of vegetation.
<i>allowed values:</i> Algae Kelp Mangrove Nipa No Information Other Posidonia Reed Sargassum Sea-tangle Water Hyacinth						
Hydrographic Vertical Positioning Information : Sounding Metadata : Vessel Draft Correction	1	No Information	Boolean	Unitless	0	An indication that a vessel draft correction has been applied.
<i>allowed values:</i> False No Information True						
Hydrographic Vertical Positioning Information : Water Level Effect	1	No Information	Enumeration	Unitless	0	The relationship between the feature and surrounding (including covering and/or underlying) water.
<i>allowed values:</i> Always Dry Always Submerged Awash at Chart Datum Awash at Low Water Covers and Uncovers No Information Other Partly Submerged						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature AquaticVegetation (Point 00)New ☐ Aquatic Vegetation

A region of waterborne cellular or vascular plants (for example: algae, grasses, reeds, and water hyacinths). [Description] The vegetation may moored (for example: sea grass and reeds) or floating (for example: sargasso and water hyacinths).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aquatic Vegetation Cover	1	-999999	REAL	Percent	0	The portion of a waterbody surface area that is covered by aquatic vegetation.
<i>allowed values:</i> -999999						
Aquatic Vegetation Growth Habit	1	No Information	Enumeration	Unitless	0	The growth pattern, location and/or habit of aquatic vegetation.

<i>allowed values:</i>	Emergent Submerged			Free-floating Waterlogged			No Information	Other
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.		
<i>allowed values:</i> -999999								
Hydrographic Vertical Positioning Information : Sounding Metadata : Bathymetric Measurement Quality Category	3	No Information	Enumeration	Unitless	0	A general evaluation of the qualities of a bathymetric measurement, as a category. [Description] Drying heights are typically captured using negative (bathymetric) sounding values; their certainty of measurement may be categorized in the same manner as positive values.		
<i>allowed values:</i>	Depth Doubtful Least Depth Not Applicable Unconfirmed Depth			Depth Known Maintained Depth Other Unmaintained Depth			Depth Unknown No Bottom Reported Depth	Depth Unreliable No Information Safe Clearance Known
Hydrographic Vertical Positioning Information : Bathymetric Measurement Technique	3	No Information	Enumeration	Unitless	0	The technique used to determine water depth(s).		
<i>allowed values:</i>	Area Swept by Side-scan Sonar Computer Generated Lead-line Other Singlebeam			Area Swept by Vertical Acoustic System Diver Levelling Photogrammetry Underwater Utility Vehicle			Area Swept by Wire-drag Echo Sounder Multi-beam Echo Sounder Satellite Imagery	Bathymetric LiDAR Electromagnetic Sensor No Information Side-scan Sonar
Dangerous to Navigation	1	No Information	Boolean	Unitless	0	An indication that a hazard in a waterbody is considered to be dangerous to surface navigation. [Description] For example, broken piles, a rock formation, or a reef in moderately deep waters. For large vessels a depth of less than 20 metres is generally considered to be dangerous.		
<i>allowed values:</i> False				No Information			True	
Hydrographic Vertical Positioning Information : Depth Exposition	1	No Information	Enumeration	Unitless	0	Indicates specific depths governed by IHO regulations used in indicating safe navigation, as categories.		
<i>allowed values:</i>	Covered < 20 metres			Covered >= 20 metres but < 30 metres			Covered >= 30 metres	No Information
Hydrographic Vertical Positioning Information : Elevation Above Waterbody Floor	1	-999999	REAL	Metre	0	The elevation of an object measured vertically from the waterbody floor to the base (lowest point) of the object.		
<i>allowed values:</i> -999999								
New Feature Code	1	BD061	CONSTRAINED_ STRING	Unitless	5	Feature Code		
<i>allowed values:</i> BD061								
Floating	1	No Information	Boolean	Unitless	0	An indication that an object is floating.		
<i>allowed values:</i> False				No Information			True	
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.		
<i>allowed values:</i> No Information								
Hydrographic Vertical Positioning Information : Height Above Waterbody Floor	1	-999999	REAL	Metre	0	The height of an object measured vertically from the waterbody floor to the top (highest point) of the object.		
<i>allowed values:</i> -999999								
Hydrographic Vertical Positioning Information : Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.		
<i>allowed values:</i> -999999								
Human Hazard	1	No Information	Enumeration	Unitless	0	The type(s) of a possible danger to human activity (for example: slipping) which may be present due to naturally occurring conditions (for example: algae covered rocks).		

<i>allowed values:</i>	Abrasion No Information		Biological Other			Drowning Puncture	Entanglement Slipping
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999	REAL	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.	
<i>allowed values:</i> -999999							
Hydrographic Vertical Positioning Information : Hydrographic Drying Height	1	-999999	REAL	Metre	0	The height of the feature, which tidal waters cover and uncover, referenced to a specified sounding datum.	
<i>allowed values:</i> -999999							
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<i>allowed values:</i> -999999							
Hydrographic Vertical Positioning Information : Maritime Navigation Marked	1	No Information	Boolean	Unitless	0	An indication that a feature is significant to maritime safety of navigation and is marked (for example: by a light or beacon) by a maritime-specific navigational aid. [Description] Mariners may also use other prominent features (for example: rotating aeronautical beacons or lighted structures) for informal navigational purposes.	
<i>allowed values:</i> FALSE			No Information			TRUE	
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i> No Information							
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i> No Information							
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
<i>allowed values:</i> U							
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.	
<i>allowed values:</i>	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)		Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Hydrographic Vertical Positioning Information : Sonar-confirmed	1	No Information	Boolean	Unitless	0	An indication that a contact or other object has been confirmed by sonar.
<i>allowed values:</i> False			No Information			True
Hydrographic Vertical Positioning Information : Sounding Metadata : Sounding Datum	1	No Information	Enumeration	Unitless	0	The tidal datum to which soundings and drying heights are referenced. [Description] It is usually taken to correspond to a low water stage of the tide.
<i>allowed values:</i>						
Approximate Lowest Astronomical Tide			Approximate Mean Low Water			Approximate Mean Low Water Springs
Approximate Mean Sea Level			Chart Datum (Unspecified)			Equinoctial Spring Low Water
High Water Springs			Higher High Water			Higher High Water Large Tide
Highest High Water			Indian Spring High Water			Indian Spring Low Water
Local Datum			Low Water			Low Water Springs
Lower Low Water Large Tide			Lowest Astronomical Tide			Lowest Low Water
Mean High Water			Mean High Water Neaps			Mean High Water Springs
Mean Higher High Water Springs			Mean Low Water			Mean Low Water Neaps
Mean Lower Low Water			Mean Lower Low Water Springs			Mean Sea Level
Mean Water Level			Neap Tide			Nearly Highest High Water
No Information			Other			Spring Tide
Hydrographic Vertical Positioning Information : Sounding Metadata : Sounding Datum Name	1	No Information	String	Unitless	80	The name of the tidal datum to which soundings and drying heights are referenced. [Description] Used when the sounding datum is known but not specified using Attribute: 'Sounding Datum'.
<i>allowed values:</i> No Information						
Hydrographic Vertical Positioning Information : Sounding Metadata : Sounding Velocity Correction Method	1	No Information	Enumeration	Unitless	0	The method of correction that has been used to correct a sounding velocity instrument reading to obtain the correct depth.
<i>allowed values:</i>						
Mathews Tables			No Information			Not Applicable
Sound Velocity Meter			Sounder 1500 Calibrated			Other
						Sounder 4800 Calibrated
						Sounder Other Calibrated
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Hydrographic Vertical Positioning Information : Uncovering Height Known	1	No Information	Boolean	Unitless	0	An indication that information is known about the height to which a marine feature may be uncovered by the tide.
<i>allowed values:</i> FALSE			No Information			TRUE
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Vegetation Species	3	No Information	Enumeration	Unitless	0	The predominant species of a tract of vegetation.

allowed values: Algae No Information Sargassum			Kelp Other Sea-tangle			Mangrove Posidonia Water Hyacinth	Nipa Reed
Hydrographic Vertical Positioning Information : Sounding Metadata : Vessel Draft Correction	1	No Information	Boolean	Unitless	0	An indication that a vessel draft correction has been applied.	
allowed values: False			No Information			True	
Hydrographic Vertical Positioning Information : Water Level Effect	1	No Information	Enumeration	Unitless	0	The relationship between the feature and surrounding (including covering and/or underlying) water.	
allowed values: Always Dry Covers and Uncovers			Always Submerged No Information			Awash at Chart Datum Other	Awash at Low Water Partly Submerged
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Aqueduct (Area 00)

New ☐ Aqueduct

A pipe or artificial channel that is designed to transport water from a remote source, usually by gravity, for freshwater supply, agricultural, and/or industrial use. [Description] It may be supported by a bridge.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Inland Waterbody Bank (1) : Above Water Bank Slope (first bank)	1	-999999	REAL	Percent	0	The amount of upward inclination between the horizontal surface of the mean water level of a watercourse where it touches the bank and the top of the first usable break in slope, measured at the same point on the upper bank as the military gap width. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
allowed values: -999999						
allowed values: -999999						
Aqueduct Type	1	No Information	Enumeration	Unitless	0	The type of an aqueduct based on its structure.
allowed values: No Information Underwater			Qanat			Surface Underground
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
allowed values: -999999						
Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
allowed values: [-999999, -999999]			No Information			
Inland Waterbody Bank (2) : Bank Orientation (second bank)	1	No Information	Enumeration	Unitless	0	The relative orientation of a bank of an inland waterbody based on the direction of predominant water flow in the adjacent waterbody.

	<i>allowed values:</i> Indeterminate Other		Left Right		No Flow	No Information	
	<i>allowed values:</i> Indeterminate Other		Left Right		No Flow	No Information	
New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<i>allowed values:</i> -999999						
	Contained within Tunnel	1	No Information	Boolean	Unitless	0	The object is at least partially located within, or passes through, a tunnel. [Description] For example, a canal passing through a tunnel.
	<i>allowed values:</i> False			No Information		True	
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian National Public			International No Information State		Joint Military and Civilian Other	Military Private
	Covered Drain	1	No Information	Boolean	Unitless	0	An indication that a watercourse section is completely covered over and connects to uncovered watercourses at each end.
	<i>allowed values:</i> False			No Information		True	
	Covered Drain Length	1	-999999	Real	Metre	0	The length of a watercourse section that is completely covered over and connects to uncovered watercourses at each end.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN ⁻ . These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999						
	Deck Level	1	-999999	REAL	Unitless	0	The relative level of a deck within a set of vertically stacked decks, one over another, in a transportation structure (for example: on a bridge or in a tunnel). [Description] The lowest deck is numbered '1' and the remaining decks are numbered in ascending order (bottom to top) with the uppermost deck being assigned the highest value.
	<i>allowed values:</i> -999999						
New	Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
	<i>allowed values:</i> -999999						
	Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned		Not in Operation Temporarily Non-operational	Operational
New	Feature Code	1	BH010	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BH010						
	Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
	Geographic Name Type	2	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Other			Historical Transliterated Provisional		Native Transliterated Unverified Transliterated	No Information Variant Transliterated
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999						

	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999						
	Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
	<u>allowed values:</u> -999999						
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<u>allowed values:</u> Dry			Intermittent			No Information Perennial
New	Least Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling.
	<u>allowed values:</u> -999999						
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<u>allowed values:</u> -999999						
New	Maximum Water Depth	1	-999999	Real	Metre		Maximum water depth the object was designed to hold.
	<u>allowed values:</u> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information			True
	Pedestrian Traversable	1	No Information	Boolean	Unitless	0	An indication that a feature is traversable on foot.
	<u>allowed values:</u> False			No Information			True
New	Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<u>allowed values:</u> -999999						
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<u>allowed values:</u> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
	Predominant Average Water Velocity	1	[-999999,-999999]	Real_Interval	Metres per Second	0	The average water velocity, exclusive of high water due to runoff or low water due to drought.
	<u>allowed values:</u> (1.5, INFINITY)			(-INFINITY, 1.5]			[-999999,-999999]

Predominant Maximum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i>	[-999999, -999999]		No Information			
Predominant Maximum Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i>	[-999999, -999999]		No Information			
Predominant Minimum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i>	[-999999, -999999]		No Information			
Predominant Minimum Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average minimum (seasonal low water) water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i>	[-999999, -999999]		No Information			
Predominant Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i>	[-999999, -999999]		No Information			
Inland Waterbody Bank (1) : Predominant Waterbody Bank Height (first bank)	1	[-999999, -999999]	REAL_Interval	Metre	0	The predominant height (the height of at least 50 percent) of the bank, measured from mean water level to the first break in slope above the mean water level.
<i>allowed values:</i>	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval	
<i>allowed values:</i>	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval	
Inland Waterbody Bank (1) : Predominant Waterbody Bank Slope (first bank)	1	[-999999, -999999]	REAL_Interval	Percent	0	The predominant slope (the slope of at least 50 percent) of the bank, measured from mean water level to the first accessible break in slope above the mean water level. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
<i>allowed values:</i>	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval	
<i>allowed values:</i>	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval	
Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).
<i>allowed values:</i>	Depressed Raised		Level		No Information Not Applicable	
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i>	U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
	allowed values:	No Information					
	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
	allowed values:	No Information					
	Inland Waterbody Bank (1) : Shoreline Delineated (first bank)	1	No Information	Boolean	Unitless	0	An indication that the delineation of a shoreline is definite. [Description] The delineation of the shoreline along a beach is typically definite whereas along a mangrove swamp it is typically indefinite.
allowed values:	False	No Information				True	
allowed values:	False	No Information				True	
Inland Waterbody Bank (1) : Shoreline Type (first bank)	1	No Information	Enumeration	Unitless	0	The physical characteristics of a shoreline.	
allowed values:	Building Rubble	Erosion Rubble	Ice	Mangrove			
	Marshy	Mud	No Information	Other			
	Sandy	Shingly	Stony

	Marshy	Mud	No Information	Other			
	Sandy	Shingly	Stony				
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.	
allowed values:	No Information						
Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.	
allowed values:	-999999						
Supported by Bridge Span	1	No Information	Boolean	Unitless	0	The object is at least partially supported by, or passes across, a bridge span. [Description] For example, an aqueduct carried across a valley by one or more bridge spans.	
allowed values:	False	No Information				True	
Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.	
allowed values:	-999999						

	Terrain Gap Width	1	-999999	REAL	Metre	0	The minimum horizontal bridging distance necessary to cross a channel. [Description] The width is measured perpendicular to the direction of water flow from bank to bank, at the first usable break in slope on each side of the channel above mean high water. Usable banks are those accessible by vehicles; small unusable ledges and cliffs are not considered usable breaks in slopes.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<i>allowed values:</i> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<i>allowed values:</i> No Information						
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Flow	1	-999999	Real	Litres per Minute	0	The rate of water flow through or exiting from a feature.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Flow Rate Category	1	No Information	Enumeration	Unitless		Value used to categorize streams, canals, rivers and other flowing water given the quantity of water flow. The categories correspond to specifications for water purification units in order to allow for quick identification of areas of water flow that are most suitable for placement of water purification equipment.
	<i>allowed values:</i> Large Small			Moderate		No Information	Other
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i> -999999						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i> Contaminated Potable			No Information Treatable		Nonpotable	Other
New	Water Resource Information : Water Pump Accessibility	1	No Information	Enumeration	Unitless		The approachable or easily entered side of a water source where portable equipment including pumps and pipes may be placed into the water source and used with nearby portable equipment. [Description] Provides an indication of whether it is possible access the water for the purpose of connecting portable water pumping equipment to temporary purification units. Accessibility must meet distance requirements in the transport of water: 100 m horizontal and 10 m vertical.
	<i>allowed values:</i> From All Sides No Information			From Left		From Right	No Accessibility
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
	<i>allowed values:</i> Alkaline Mineral Saline			Brackish No Information Seawater		Brine Not Applicable	Fresh Other
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.

allowed values:	Agricultural Irrigation Institutional Other	Commercial Livestock Power Generation	Domestic Irrigation Municipal Recreational	Industrial No Information Sanitary Domestic		
Inland Waterbody Bank (2) : Waterbody Bank Height (second bank)	1	-999999	REAL	Metre	0	The height of the waterbody bank above the average water level.
allowed values:	-999999					
allowed values:	-999999					
Inland Waterbody Bank (1) : Waterbody Bank Vegetation Cover (first bank)	1	[-999999, -999999]	REAL_Interval	Percent	0	The fraction of vegetation cover on the bank of a watercourse.
allowed values:	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval	Closed Interval Greater-than-or-equal to Less-than Interval				Greater-than or Equal Semi-interval Less-than or Equal Semi-interval
allowed values:	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval	Closed Interval Greater-than-or-equal to Less-than Interval				Greater-than or Equal Semi-interval Less-than or Equal Semi-interval
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature Aqueduct (Line 00)

New ☐ Aqueduct

A pipe or artificial channel that is designed to transport water from a remote source, usually by gravity, for freshwater supply, agricultural, and/or industrial use. [Description] It may be supported by a bridge.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Inland Waterbody Bank (2) : Above Water Bank Slope (second bank)	1	-999999	REAL	Percent	0	The amount of upward inclination between the horizontal surface of the mean water level of a watercourse where it touches the bank and the top of the first usable break in slope, measured at the same point on the upper bank as the military gap width. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
allowed values:	-999999					
allowed values:	-999999					
Aqueduct Type	1	No Information	Enumeration	Unitless	0	The type of an aqueduct based on its structure.
allowed values:	No Information Underwater		Qanat			Surface Underground
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values:	-999999					
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.

<u>allowed values:</u> -999999						
Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> [-999999, -999999] No Information						
Inland Waterbody Bank (1) : Bank Orientation (first bank)	1	No Information	Enumeration	Unitless	0	The relative orientation of a bank of an inland waterbody based on the direction of predominant water flow in the adjacent waterbody.
<u>allowed values:</u> Indeterminate Left No Flow No Information						
Other Right						
<u>allowed values:</u> Indeterminate Left No Flow No Information						
Other Right						
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<u>allowed values:</u> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<u>allowed values:</u> -999999						
Contained within Tunnel	1	No Information	Boolean	Unitless	0	The object is at least partially located within, or passes through, a tunnel. [Description] For example, a canal passing through a tunnel.
<u>allowed values:</u> False No Information True						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<u>allowed values:</u> Civilian International Joint Military and Civilian Military						
National No Information Other Private						
Public State						
Covered Drain	1	No Information	Boolean	Unitless	0	An indication that a watercourse section is completely covered over and connects to uncovered watercourses at each end.
<u>allowed values:</u> False No Information True						
Covered Drain Length	1	-999999	Real	Metre	0	The length of a watercourse section that is completely covered over and connects to uncovered watercourses at each end.
<u>allowed values:</u> -999999						
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN ⁻ . These are powerful poisons that are toxic to humans and aquatic life.
<u>allowed values:</u> -999999						
Deck Level	1	-999999	REAL	Unitless	0	The relative level of a deck within a set of vertically stacked decks, one over another, in a transportation structure (for example: on a bridge or in a tunnel). [Description] The lowest deck is numbered '1' and the remaining decks are numbered in ascending order (bottom to top) with the uppermost deck being assigned the highest value.
<u>allowed values:</u> -999999						
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<u>allowed values:</u> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<u>allowed values:</u> No Information Non-operational Not in Operation Operational						
Partially Operational Planned Temporarily Non-operational						
New Feature Code	1	BH010	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> BH010						
Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Geographic Name Type	2	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.

<i>allowed values:</i> Conventional Other		Historical Transliterated Provisional		Native Transliterated Unverified Transliterated		No Information Variant Transliterated
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999						
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry			Intermittent			No Information Perennial
New Least Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
New Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999						
New Maximum Water Depth	1	-999999	Real	Metre		Maximum water depth the object was designed to hold.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Pedestrian Traversable	1	No Information	Boolean	Unitless	0	An indication that a feature is traversable on foot.
<i>allowed values:</i> False			No Information			True
New Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999						

New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	allowed values:						
	Damaged			Destroyed		Dismantled	Intact
	No Information			Ruined		Site Preparation	Under Construction
	Unmaintained						
	Predominant Average Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second	0	The average water velocity, exclusive of high water due to runoff or low water due to drought.
	allowed values:						
	(1.5, INFINITY)			(-INFINITY, 1.5]		[-999999, -999999]	
	Predominant Maximum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	allowed values:						
	[-999999, -999999]			No Information			
	Predominant Maximum Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.
	allowed values:						
	[-999999, -999999]						
	Predominant Minimum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	allowed values:						
	[-999999, -999999]			No Information			
	Predominant Minimum Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average minimum (seasonal low water) water velocity, exclusive of high water due to runoff or low water due to drought.
	allowed values:						
	[-999999, -999999]						
	Predominant Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	allowed values:						
	[-999999, -999999]			No Information			
	Inland Waterbody Bank (2) : Predominant Waterbody Bank Height (second bank)	1	[-999999, -999999]	REAL_Interval	Metre	0	The predominant height (the height of at least 50 percent) of the bank, measured from mean water level to the first break in slope above the mean water level.
	allowed values:						
	[-999999, -999999]			Closed Interval		Greater-than or Equal Semi-interval	Greater-than Semi-interval
	Greater-than to Less-than-or-equal Interval			Greater-than-or-equal to Less-than Interval		Less-than or Equal Semi-interval	Less-than Semi-interval
	Open Interval						
	allowed values:						
	[-999999, -999999]			Closed Interval		Greater-than or Equal Semi-interval	Greater-than Semi-interval
	Greater-than to Less-than-or-equal Interval			Greater-than-or-equal to Less-than Interval		Less-than or Equal Semi-interval	Less-than Semi-interval
	Open Interval						
	Inland Waterbody Bank (1) : Predominant Waterbody Bank Slope (first bank)	1	[-999999, -999999]	REAL_Interval	Percent	0	The predominant slope (the slope of at least 50 percent) of the bank, measured from mean water level to the first accessible break in slope above the mean water level. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
	allowed values:						
	[-999999, -999999]			Closed Interval		Greater-than or Equal Semi-interval	Greater-than Semi-interval
	Greater-than to Less-than-or-equal Interval			Greater-than-or-equal to Less-than Interval		Less-than or Equal Semi-interval	Less-than Semi-interval
	Open Interval

		Sandy	Shingly	Stony			
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
	allowed values: No Information						
	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
allowed values: -999999							
	Supported by Bridge Span	1	No Information	Boolean	Unitless	0	The object is at least partially supported by, or passes across, a bridge span. [Description] For example, an aqueduct carried across a valley by one or more bridge spans.
	allowed values: False			No Information			True
	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
	allowed values: -999999						

	Terrain Gap Width	1	-999999	REAL	Metre	0	The minimum horizontal bridging distance necessary to cross a channel. [Description] The width is measured perpendicular to the direction of water flow from bank to bank, at the first usable break in slope on each side of the channel above mean high water. Usable banks are those accessible by vehicles; small unusable ledges and cliffs are not considered usable breaks in slopes.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<i>allowed values:</i> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<i>allowed values:</i> No Information						
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Flow	1	-999999	Real	Litres per Minute	0	The rate of water flow through or exiting from a feature.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Flow Rate Category	1	No Information	Enumeration	Unitless		Value used to categorize streams, canals, rivers and other flowing water given the quantity of water flow. The categories correspond to specifications for water purification units in order to allow for quick identification of areas of water flow that are most suitable for placement of water purification equipment.
	<i>allowed values:</i> Large Small			Moderate		No Information	Other
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i> -999999						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i> Contaminated Potable			No Information Treatable		Nonpotable	Other
New	Water Resource Information : Water Pump Accessibility	1	No Information	Enumeration	Unitless		The approachable or easily entered side of a water source where portable equipment including pumps and pipes may be placed into the water source and used with nearby portable equipment. [Description] Provides an indication of whether it is possible access the water for the purpose of connecting portable water pumping equipment to temporary purification units. Accessibility must meet distance requirements in the transport of water: 100 m horizontal and 10 m vertical.
	<i>allowed values:</i> From All Sides No Information			From Left		From Right	No Accessibility
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
	<i>allowed values:</i> Alkaline Mineral Saline			Brackish No Information Seawater		Brine Not Applicable	Fresh Other
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.

allowed values:	Agricultural Irrigation Institutional Other	Commercial Livestock Power Generation	Domestic Irrigation Municipal Recreational	Industrial No Information Sanitary Domestic		
Inland Waterbody Bank (1) : Waterbody Bank Height (first bank)	1	-999999	REAL	Metre	0	The height of the waterbody bank above the average water level.
allowed values:	-999999					
allowed values:	-999999					
Inland Waterbody Bank (2) : Waterbody Bank Vegetation Cover (second bank)	1	[-999999, -999999]	REAL_Interval	Percent	0	The fraction of vegetation cover on the bank of a watercourse.
allowed values:	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval	Closed Interval Greater-than-or-equal to Less-than Interval				Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
allowed values:	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval	Closed Interval Greater-than-or-equal to Less-than Interval				Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Aquifer (Area 00)

New ☐ Aquifer

An underground layer of water-bearing permeable rock or unconsolidated materials (for example: gravel, sand, silt, or clay). [Description] It may yield economically significant quantities of groundwater to wells and springs.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aquifer Composition	1	No Information	Enumeration	Unitless	0	The type of permeable geologic formation that composes the aquifer. [Description] The ability of the aquifer to store water is dependent on the porosity and permeability of the aquifer composition.
allowed values:			Basalt Dolomite Karst Mud Schist			Boulders Granite Limestone No Information Semi-consolidated and Consolidated Volcanic Ash Clay Gravel Marl Other Unconsolidated Conglomerate Igneous Rock Metamorphic Rock Sand Volcanic Rock
Aquifer Depth	1	[-999999, -999999]	Real_Interval	Metre	0	The distance between the terrain surface and the upper surface of the aquifer.
allowed values:	[-999999, -999999]		-999999			No Information
New Aquifer Name	1	No Information	String	Unitless	254	The common or scientific name of an aquifer.
allowed values:	No Information					

Aquifer Overburden	3	No Information	Enumeration	Unitless	0	The type(s) and/or morphology(ies) of terrain material that overlie an aquifer
allowed values:	Basalt Dolomite Karst Mud Schist		Boulders Granite Limestone No Information Semi-consolidated and Consolidated Volcanic Ash			Clay Gravel Marl Other Unconsolidated Conglomerate Igneous Rock Metamorphic Rock Sand Volcanic Rock
Aquifer Thickness	1	[-999999, -999999]	Real_Interval	Metre	0	The distance between the upper and lower surfaces of an aquifer. [Description] The value describes the vertical extent of the completely saturated portion of the aquifer.
allowed values:	[-999999, -999999]		-999999			No Information
Aquifer Yield Rating	1	[-999999, -999999]	Real_Interval	Litre per Minute	0	The estimated typical long-term yield from a single, properly sited and constructed well in the aquifer.
allowed values:	[-999999, -999999]		-999999			No Information
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values:	-999999					
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
allowed values:	-999999					
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
allowed values:	-999999					
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
allowed values:	-999999					
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
allowed values:	-999999					
New Feature Code	1	BH116	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values:	BH116					
Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values:	No Information					
Geographic Name Type	3	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
allowed values:	Conventional Other		Historical Transliterated Provisional			Native Transliterated Unverified Transliterated No Information Variant Transliterated
New Groundwater Potential Score	1	-999999	REAL	Unitless	0	A calculated quality rating of the ground water where zero indicates unsuitable water and 1000 indicates excellent water quality. This rating is derived from well yields, aquifer attribution, water quality parameters, and characteristics of the surface and overburden materials. Description: This value is typically interpreted using ranges for unsuitable [0], poor (0-0.015749], moderate (0.015749-400] and good (400, 1000] quality.
allowed values:	-999999					
Hydrologic Persistence	1	No Information	Enumeration	Unitless		The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
allowed values:	Dry Perennial		Ephemeral			Intermittent No Information

	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<u>allowed values:</u> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
New	Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<u>allowed values:</u> -999999						
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<u>allowed values:</u> U						
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature Arcade (Area 00)New ☐ Arcade**A covered pedestrian route composed of arches and pillars, usually open along one or both sides.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<u>allowed values:</u> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AQ151	CONSTRAINED_ STRING	Unitless	5	Feature Code
<u>allowed values:</u> AQ151						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						

	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.		
	<i>allowed values:</i> False			No Information			True		
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.		
	<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction		
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.		
	<i>allowed values:</i> U								
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.		
	<i>allowed values:</i> No Information								
	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.		
	<i>allowed values:</i> No Information								
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.		
	<i>allowed values:</i> No Information								
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.		
	<i>allowed values:</i> No Information								

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature ArcheologicalSite (Point 00)New ☐ Archeological Site**A site where remains of past civilizations or human activity have been discovered.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<u>allowed values:</u> False			No Information			True
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999						
New Feature Code	1	AL012	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> AL012						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values: False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless	0	The physical state of a structure, or site, as a whole.
allowed values: Damaged No Information Under Construction			Destroyed Other Unmaintained			Dismantled Ruined Intact Site Preparation
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
----------------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
---------------------------------	---	----------------	--------	----------	----	---

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature AstronomicalObservatory (Area 00)

New ☐ Astronomical Observatory

A building designed and equipped (for example: with a telescope) for making observations of celestial objects (including the earth in relation to them), of space, and of the universe as a whole. [Description] Typically incorporates a dome-shaped covering that may be opened in order to expose instruments to the sky or closed to protect them from the weather.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National State			International No Information			Joint Military and Civilian Other Military Private

Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
allowed values:	No Information					

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature AstronomicalObservatory (Point 00)

New ☐ Astronomical Observatory

A building designed and equipped (for example: with a telescope) for making observations of celestial objects (including the earth in relation to them), of space, and of the universe as a whole. [Description] Typically incorporates a dome-shaped covering that may be opened in order to expose instruments to the sky or closed to protect them from the weather.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
allowed values: No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
allowed values: False			No Information			True
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
allowed values: -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
allowed values: Civilian National State			International No Information			Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
allowed values: No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AL142	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: AL142						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
allowed values: Education Other			Hobbies and/or Leisure Activities Scientific Research and Development			No Information Observation Station
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.

<u>allowed values:</u> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<u>allowed values:</u> Accurate Approximate Doubtful No Information						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False No Information True						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<u>allowed values:</u> Damaged Destroyed Dismantled Intact No Information Ruined Site Preparation Under Construction Unmaintained						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i> Accurate			Approximate			Doubtful
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged			Destroyed			Dismantled
No Information			Ruined			Intact
Unmaintained						Site Preparation
						Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
allowed values:	Conical Flat with Parapet Pitched with Clerestory With Clerestory With Steeple		Domed No Information Pyramidal With Cupola With Tower		Flat Other Sawtoothed With Minaret With Turret	Flat with Clerestory Pitched Semi-cylindrical With Smokestack
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
allowed values:	Adobe Brick Masonry Prestressed Concrete Stone		Brick Metal Reinforced Concrete Wood		Concrete No Information Sod	Iron Other Steel
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Wireless Telecommunication Information : Wireless Telecommunication Type	1	No Information	Enumeration	Unitless	0	The type of a wireless telecommunication service based on the mechanism(s) of transmission and/or the nature of the communication(s) supported. [Description] For example, radio broadcast or mobile phone service.

<i>allowed values:</i> Cellular Phone Other Television (TV)	Microwave Radio Relay Radio Broadcast	Mobile Phone Radio Telephone	No Information Radio-telegraph

Feature BasinGate (Line 00)New ☐ Basin Gate

A gate that impounds water within a basin or chamber that is used by watercraft. [Description] For example, gates used at locks or dry docks.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Basin Gate Type	1	No Information	Enumeration	Unitless	0	The type of a basin gate based on its structure and/or intended use.
<i>allowed values:</i> Caisson Tide Lock			Lock Gate			No Information Other
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BI045	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i> BI045						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Maritime Bottom Characteristic (second material quality)	1	No Information	Enumeration	Unitless	0	The physical characteristic(s) (for example: particle size, morphology or consistency) of the primary type of material composing a feature. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.

allowed values:	Bare	Broken	Calcareous	Coarse				
	Decayed	Fine	Flinty	Glacial				
	Gritty	Ground	Hard	Irregular				
	Large	Medium	Mobile Bottom	No Information				
	Other	Rocky	Rotten	Small				
	Soft	Speckled	Sticky	Stiff

	Restriction Information : Security Attributes Group (resource owner-producer)		1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information								
Maritime Bottom Characteristic (Second Sediment Colour)		1	No Information	Enumeration	Unitless	0	The general colour of a waterbody sediment based on the Geological Society of America (GSA) rock colour chart and the Munsell colour system. [Description] The Munsell system is based on a colour solid, or approximately a colour sphere, which has a neutral gray central axis grading from white at the top to black at the bottom. This property of lightness is called value. Around the circumference or equator of the solid are the ten major hues, each of which is divided into ten numbered divisions, so that 5 marks the middle of the hue, and 10 marks the boundary between one hue and the next. Thus, any particular hue can be designated by a number and a letter such as 5R or 10YR. Any single vertical section through the neutral gray axis and a particular hue constitutes a colour chart on which the colors grade in value from light at the top to dark at the bottom, and in chroma (degree of saturation) from gray at one edge to the most vivid colors out at the margin. Both value and chroma are numbered so any particular colour can be given a numerical designation representing hue, value, and chroma such as 5R 6/4 and 10YR 8/2. Colour names are based on the Inter-Society Color Council-National Bureau of Standards system of names.	

<i>allowed values:</i>	Black	Brilliant Green	Dark Greenish Yellow	Dark Reddish Brown

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
allowed values: No Information			Non-operational			Not in Operation
Partially Operational			Planned			Temporarily Non-operational

New	Feature Code	1	ZB020	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i> ZB020							
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information							
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information							
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information							
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged Destroyed Dismantled Intact No Information Ruined Site Preparation Under Construction Unmaintained							
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U							
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<i>allowed values:</i> Army Geographic Agency (Netherlands) Army Geographic Centre (Spain) Army Geographic Institute (Portugal) Bundeswehr Geoinformation Office (Germany) Defence Acquisition and Logistics Organization (Denmark) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Defence Imagery and Geospatial Organisation (Australia) Defense Information Security (Italy) General Command of Mapping (Turkey) Geographic Service (Belgium) Geographic Service of the Czech Armed Forces (Czech Republic) Geospatial Information Agency (Latvia) Geospatial Intelligence Organisation (New Zealand) Hellenic Military Geographic Service (Greece) Joint Geography Bureau (France) Mapping and Charting Establishment (Canada) Mapping Service (Hungary) Military Geographic Group (Estonia) Military Geographic Service (Norway) Military Geography Division (Poland) Military Mapping Centre (Lithuania) Military Topographic Directorate (Romania) Military Topographic Service (Bulgaria) National Army Topographic Service (Moldova) No Information Other Swedish Armed Forces (Sweden) Topographic Institute (Slovakia) Topographic Service (Finland) U.S. Africa Command (USAFRICOM) U.S. Air Force U.S. Army U.S. Army Geospatial Center (AGC) U.S. Central Command (USCENTCOM) U.S. Central Intelligence Agency (CIA) U.S. Coast Guard U.S. Defense Intelligence Agency (DIA) U.S. Department of Energy (DOE) U.S. Department of Homeland Security (DHS) U.S. Department of State U.S. European Command (USEUCOM) U.S. Federal Bureau of Investigation (FBI) U.S. Geological Survey (USGS) U.S. Joint Forces Command (USJFCOM) U.S. Marine Corps U.S. National Civil Applications Program (NCAP) U.S. National Geospatial-Intelligence Agency (NGA) U.S. National Oceanic and Atmospheric Administration U.S. National Reconnaissance Office (NRO) U.S. National Security Agency (NSA) U.S. Navy U.S. Northern Command (USNORTHCOM) U.S. Pacific Command (PACOM) U.S. Southern Command (USSOUTHCOM) U.S. Special Operations Command (USSOCOM) U.S. Strategic Command (USSTRATCOM) U.S. Transportation Command (USTRANSCOM)							
	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information							

Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Survey Control Point Type	1	No Information	Enumeration	Unitless	0	The type of a control point established by surveying methods based on method of establishment and/or intended use.
<i>allowed values:</i> Benchmark Vertical Position			Horizontal Position			Horizontal Position and Benchmark No Information
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information

Feature Billboard (Point 00)

New ☐ Billboard

A large outdoor board for advertisements. [Description] May be attached to another structure or self-supporting. Usually elevated so as to be seen for a significant distance.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
allowed values: <i>False</i> <div> No Information </div> <i>True</i>						

Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AG050	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AG050						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Accommodation Commerce Food Service Law Enforcement Museum Petrol Sale Public Order, Safety and Security Services Restaurant			Amusement Cultural, Arts and Entertainment Government Library Navigation Postal Activities Publishing and Broadcasting Restroom			Botanical and/or Zoological Reserve Activities Defence Activities Human Health Activities Membership Organization No Information Professional, Scientific and Technical Recreation Short-term Accommodation <i>Business and Personal Support Services</i> Education Institution Motor Vehicle Repair Other Public Administration Religious Activities Sports, Amusement and Recreation
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature BlastFurnace (Point 00)New ☐ Blast-furnace**A smelting furnace in which a blast of air is used, especially one for iron-smelting using a compressed hot air blast.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<u>allowed values:</u> <i>False</i>			No Information			<i>True</i>
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<u>allowed values:</u> No Information <i>Partially Operational</i>			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AC010	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> <i>AC010</i>						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False No Information True						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged Destroyed Dismantled Intact No Information Ruined Site Preparation Under Construction Unmaintained						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature Bog (Area 00)New ☐ Bog

A permanently wet area of land consisting of incompletely decayed organic material and mainly stagnant fresh water. [Description] It is generally too soft to bear the weight of any heavy body. A subtype of the more generalized wetland.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999, -999999]			No Information			
Bog Type	1	No Information	Enumeration	Unitless	0	The type of a bog or fen based on its morphology and/or dominant vegetation. [Description] A fen is similar to a bog but may have alkaline, neutral, or only slightly acid peaty soil whereas a bog is generally very acidic. In both cases the vegetation is usually dominated by peat mosses, ericaceous shrubs, and sedges.
<i>allowed values:</i>			Atlantic Plateau Bog Domed Bog Lowland Polygon Bog Palsa Bog Shore Fen Veneer Bog	Basin Bog Fen No Information Peat Bog Slope Bog	Blanket Bog Flat Bog Northern Ribbed Fen Peat Plateau Bog Slope Fen	Cranberry Bog Horizontal Fen Other Polygonal Peat Plateau Bog String Bog
Bottom Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing the bottom of a body of water.

<i>allowed values:</i> Bedrock Other Sand and Gravel							Clay and Silt Peat Sand over Mud	Gravel and Cobble Rocks and Boulders Silty Sands	No Information Sand Soil
New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre			The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.	
<i>allowed values:</i> -999999									
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density			The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.	
<i>allowed values:</i> -999999									
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre			The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN ⁻ . These are powerful poisons that are toxic to humans and aquatic life.	
<i>allowed values:</i> -999999									
New	Deepest Depth Below Surface Level	1	-999999	Real	Metre			The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.	
<i>allowed values:</i> -999999									
New	Feature Code	1	BH015	CONSTRAINED_STRING	Unitless	5		Feature Code	
<i>allowed values:</i> BH015									
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200		A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.	
<i>allowed values:</i> No Information									
	Hydrologic Persistence	1	No Information	Enumeration	Unitless			The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.	
<i>allowed values:</i> Dry Perennial							Ephemeral	Intermittent	No Information
	Length	1	-999999	REAL	Metre	0		The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<i>allowed values:</i> -999999									
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre			The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.	
<i>allowed values:</i> -999999									
	Note : Memorandum	1	No Information	String	Unitless	2E+09		A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i> No Information									
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18		The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i> No Information									
New	Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre			The logarithm of the reciprocal of hydrogen ion (H ⁺) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.	
<i>allowed values:</i> -999999									
	Predominant Maximum Water Depth	1	[-999999, -999999]	Real_Interval	Metre			The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.	
<i>allowed values:</i> [-999999, -999999]							No Information		

Predominant Minimum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
allowed values:		[-999999, -999999]		No Information		
Predominant Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
allowed values:		[-999999, -999999]		No Information		
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values:		U				
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:		No Information				
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:		No Information				
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:		No Information				
New Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
allowed values:		-999999				
New Water Resource Information : Temperature	1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
allowed values:		-999999				
Tide Influenced	1	No Information	Boolean	Unitless	0	An indication that a waterbody is affected by the tide.
allowed values:		False		No Information		True

New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	The total mass of dissolved inorganic chemical constituents per volume of solution.	
	<i>allowed values:</i> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).	
	<i>allowed values:</i> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<i>allowed values:</i> No Information						
	Vegetation Trafficability Impact	1	[-999999, -999999]	Real_Interval	Percent	The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).	
	<i>allowed values:</i> [-999999, -999999]						
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	The electrical conductivity of water.	
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.	
	<i>allowed values:</i> -999999						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	The potability of water based on the type of treatment required before it is safe for human consumption.	
	<i>allowed values:</i> Contaminated Potable		No Information Treatable		Nonpotable		Other
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	The type of available water based on its composition.	
	<i>allowed values:</i> Alkaline Mineral Saline		Brackish No Information Seawater		Brine Not Applicable		Fresh Other
New	Water Resource Information : Water Use	1	No Information	Enumeration	Unitless	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.	
	<i>allowed values:</i> Agricultural Irrigation Institutional Other		Commercial Livestock Power Generation		Domestic Irrigation Municipal Recreational		Industrial No Information Sanitary Domestic
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999

Feature Borehole (Point 00) New ☐ Borehole

An excavation drilled into the ground for purposes other than the extraction of potable water, oil, gas or brine. [Description] For example, drilled to support the underground testing of munitions, for coring or sampling of bedrock or ice for scientific purposes, or drilled for the injection of waste material.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational						
			Non-operational Planned			Not in Operation Temporarily Non-operational
New Feature Code	1	AA045	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AA045						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False No Information Unmaintained						
			No Information			True

allowed values: No Information

Unique Entity Identifier 1 No Information String Unitless 254 The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Maritime Bottom Characteristic (Second Sediment Colour) 1 No Information Enumeration Unitless 0 The general colour of a waterbody sediment based on the Geological Society of America (GSA) rock colour chart and the Munsell colour system. [Description] The Munsell system is based on a colour solid, or approximately a colour sphere, which has a neutral gray central axis grading from white at the top to black at the bottom. This property of lightness is called value. Around the circumference or equator of the solid are the ten major hues, each of which is divided into ten numbered divisions, so that 5 marks the middle of the hue, and 10 marks the boundary between one hue and the next. Thus, any particular hue can be designated by a number and a letter such as 5R or 10YR. Any single vertical section through the neutral gray axis and a particular hue constitutes a colour chart on which the colors grade in value from light at the top to dark at the bottom, and in chroma (degree of saturation) from gray at one edge to the most vivid colors out at the margin. Both value and chroma are numbered so any particular colour can be given a numerical designation representing hue, value, and chroma such as 5R 6/4 and 10YR 8/2. Colour names are based on the Inter-Society Color Council-National Bureau of Standards system of names.

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
<i>allowed values:</i>	No Information						
Vegetation Characteristic	1	No Information	Enumeration	Unitless	0	The type of a vegetated area based on species, biome, physiography and/or structural organization.	
<i>allowed values:</i>	Algae		No Information			Other	Sea Grass

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values:	No Information					
Maritime Bottom Characteristic (Second Sediment Colour)	1	No Information	Enumeration	Unitless	0	The general colour of a waterbody sediment based on the Geological Society of America (GSA) rock colour chart and the Munsell colour system. [Description] The Munsell system is based on a colour solid, or approximately a colour sphere, which has a neutral gray central axis grading from white at the top to black at the bottom. This property of lightness is called value. Around the circumference or equator of the solid are the ten major hues, each of which is divided into ten numbered divisions, so that 5 marks the middle of the hue, and 10 marks the boundary between one hue and the next. Thus, any particular hue can be designated by a number and a letter such as 5R or 10YR. Any single vertical section through the neutral gray axis and a particular hue constitutes a colour chart on which the colors grade in value from light at the top to dark at the bottom, and in chroma (degree of saturation) from gray at one edge to the most vivid colors out at the margin. Both value and chroma are numbered so any particular colour can be given a numerical designation representing hue, value, and chroma such as 5R 6/4 and 10YR 8/2. Colour names are based on the Inter-Society Color Council-National Bureau of Standards system of names.

Feature Bridge (Area 00)New ☐ Bridge

A structure that connects two locations and provides for the passage of a transportation route (for example: a road or a railway) over a terrain obstacle (for example: a waterbody, a gully, and/or a road). [Description] A bridge consists of a set of two abutments and/or zero or more bridge piers joined by bridge spans. A bridge may serve, for example, as an overpass or a viaduct. In the context of a bridge, the scope of the term 'transportation route' includes the transportation of liquids or gases by means of either pipelines or aqueducts.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Bridge Opening Type	1	No Information	Enumeration	Unitless	0	The type of structure or mechanism by which a bridge or bridge span is moved to allow passage of a vessel.
<i>allowed values:</i> Bascule No Information Submersible			Drawbridge Opening Swing-bridge			Fixed Other Lift-bridge Retractable

Bridge Reference Number	1	No Information	String	Unitless	24	The unique identifier of a bridge in accordance with the provisions of terrain analysis databases (for example: PTADB or TTADB). [Description] The identifier is assigned consecutively (for example: within a map sheet or within a local area of interest) and begins with the northwest grid square of the UTM reference system and proceeds from left to right to the east edge of the sheet or area, continuing consecutively in the same way starting back at the west edge of the next line of UTM grid squares below those previously completed. The resulting identifiers are used to index an associated Bridge Information Table.
<i>allowed values:</i>	No Information					
Bridge Structure Type	3	No Information	Enumeration	Unitless	0	The type(s) of structural design of a bridge, bridge span, or bridge superstructure.
<i>allowed values:</i>	Arch Closed Spandrel Arch No Information Stringer Beam Transporter					Bowstring-bridge Covered Open Spandrel Arch Submersible Trestle Cable Stayed Floating Other Suspension Truss Cantilever Girder Slab Tower Suspension
Bypass Condition	1	No Information	Enumeration	Unitless	0	The ease or ability to circumvent a destroyed section of bridge, tunnel or pass within a distance of two kilometres from the feature. [Description] Bypass condition will not consider other bridges in bypass determination.
<i>allowed values:</i>	Difficult					Impossible
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i>	Civilian National Public					International No Information State Joint Military and Civilian Other Military Private
Deck Count	1	-999999	REAL	Unitless	0	The number of vertically stacked decks, one over another, in a transportation structure (for example: a bridge or a tunnel).
<i>allowed values:</i>	-999999					
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i>	No Information Partially Operational					Non-operational Planned Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AQ040	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i>	AQ040					
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i>	No Information					
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i>	-999999					
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i>	-999999					
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i>	Accurate					Doubtful
Horizontal Clearance	1	-999999	REAL	Metre	0	The distance available to pass a load that extends laterally beyond the wheels of a vehicle.
<i>allowed values:</i>	-999999					No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

<u>allowed values:</u> -999999							
Load Class Type 1	1	-999999	REAL	Military Load Class	0	The dynamic live load weight-bearing capacity of a bridge or bridge span for one-way, wheeled vehicle traffic in MLC units. [Description] Military load classification values are calculated in part from the size, cross-sectional shape, and material of the stringers under the bridge span; they are similar to, but not the same as, short tons. See STANAGs 2021 and 2253 for the method of calculation.	
<u>allowed values:</u> -999999							
Load Class Type 2	1	-999999	REAL	Military Load Class	0	The dynamic live load weight-bearing capacity of a bridge or bridge span for two-way, wheeled vehicle traffic in MLC units. [Description] Military load classification values are calculated in part from the size, cross-sectional shape, and material of the stringers under the bridge span; they are similar to, but not the same as, short tons. See STANAGs 2021 and 2253 for the method of calculation.	
<u>allowed values:</u> -999999							
Load Class Type 3	1	-999999	REAL	Military Load Class	0	The dynamic live load weight-bearing capacity of a bridge or bridge span for one-way, tracked vehicle traffic in MLC units. [Description] Military load classification values are calculated in part from the size, cross-sectional shape, and material of the stringers under the bridge span; they are similar to, but not the same as, short tons. See STANAGs 2021 and 2253 for the method of calculation.	
<u>allowed values:</u> -999999							
Load Class Type 4	1	-999999	REAL	Military Load Class	0	The dynamic live load weight-bearing capacity of a bridge or bridge span for two-way, tracked vehicle traffic in MLC units. [Description] Military load classification values are calculated in part from the size, cross-sectional shape, and material of the stringers under the bridge span; they are similar to, but not the same as, short tons. See STANAGs 2021 and 2253 for the method of calculation.	
<u>allowed values:</u> -999999							
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<u>allowed values:</u> No Information							
Mobile Bridge Span	1	No Information	Boolean	Unitless	0	An indication that a bridge span moves in some manner to allow passage underneath.	
<u>allowed values:</u> FALSE			No Information			TRUE	
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<u>allowed values:</u> No Information							
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.	
<u>allowed values:</u> False			No Information			True	
New Overall Height of Bridge	1	-999999	REAL	Decimetre	0	Vertical distance measured from the lowest point at ground or water level to the highest portion of bridge (including superstructure).	
<u>allowed values:</u> -999999							
Overhead Clearance	1	-999999	REAL	Metre	0	The least distance between the travelled way and any obstruction vertically above it. [Description] Reference STANAG 2253.	
<u>allowed values:</u> -999999							
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.	
<u>allowed values:</u> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation	Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
<u>allowed values:</u> U							
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.	

allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Roofed	1	No Information	Boolean	Unitless	0	An indication that a feature is covered by a roof. [Description] The roof may be supported by spaced pillars with intervening openings or the sides may be completely closed (for example: by walls or windows) and thus afford substantial protection from the weather.
allowed values:	False		No Information			True
Span Count	1	-999999	REAL	Unitless	0	The number of spans in a bridge.
allowed values:	-999999					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
allowed values:	Aqueduct Pedestrian Runway		Canal Pipeline Taxiway			No Information Railway Other Road
Underbridge Clearance	1	-999999	REAL	Metre	0	Clearance below bridge, measured from the lowest surface level to the base of the lower of either a cross beam or the lowest bridge deck.
allowed values:	-999999					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Vertical Clearance, Safe	1	-999999	Real	Metre		The safe vertical clearance of an object measured from the horizontal plane toward the object overhead.
allowed values:	-999999					
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).

<i>allowed values:</i>	Aluminum	Brick	Concrete	Iron		
	Masonry	Metal	No Information	Other		
	Prestressed Concrete	Reinforced Concrete	Steel	Stone		
	Treated Timber	Wood				
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Bridge (Line 00)New ☐ Bridge

A structure that connects two locations and provides for the passage of a transportation route (for example: a road or a railway) over a terrain obstacle (for example: a waterbody, a gully, and/or a road). [Description] A bridge consists of a set of two abutments and/or zero or more bridge piers joined by bridge spans. A bridge may serve, for example, as an overpass or a viaduct. In the context of a bridge, the scope of the term 'transportation route' includes the transportation of liquids or gases by means of either pipelines or aqueducts.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
allowed values: False			No Information			True
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
allowed values: -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
Bridge Opening Type	1	No Information	Enumeration	Unitless	0	The type of structure or mechanism by which a bridge or bridge span is moved to allow passage of a vessel.
allowed values: Bascule No Information Submersible			Drawbridge Opening Swing-bridge			Fixed Other Lift-bridge Retractable
Bridge Reference Number	1	No Information	String	Unitless	24	The unique identifier of a bridge in accordance with the provisions of terrain analysis databases (for example: PTADB or TTADB). [Description] The identifier is assigned consecutively (for example: within a map sheet or within a local area of interest) and begins with the northwest grid square of the UTM reference system and proceeds from left to right to the east edge of the sheet or area, continuing consecutively in the same way starting back at the west edge of the next line of UTM grid squares below those previously completed. The resulting identifiers are used to index an associated Bridge Information Table.
allowed values: No Information						
Bridge Structure Type	3	No Information	Enumeration	Unitless	0	The type(s) of structural design of a bridge, bridge span, or bridge superstructure.
allowed values: Arch Closed Spandrel Arch No Information Stringer Beam Transporter			Bowstring-bridge Covered Open Spandrel Arch Submersible Trestle			Cable Stayed Floating Other Suspension Truss Cantilever Girder Slab Tower Suspension

Bypass Condition	1	No Information	Enumeration	Unitless	0	The ease or ability to circumvent a destroyed section of bridge, tunnel or pass within a distance of two kilometres from the feature. [Description] Bypass condition will not consider other bridges in bypass determination.
<i>allowed values:</i>	Difficult		Easy			Impossible
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i>	Civilian National Public		International No Information State			Joint Military and Civilian Other Military Private
Deck Count	1	-999999	REAL	Unitless	0	The number of vertically stacked decks, one over another, in a transportation structure (for example: a bridge or a tunnel).
<i>allowed values:</i>	-999999					
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i>	No Information Partially Operational		Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AQ040	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i>	AQ040					
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i>	No Information					
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i>	-999999					
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i>	-999999					
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i>	Accurate		Approximate			Doubtful
Horizontal Clearance	1	-999999	REAL	Metre	0	The distance available to pass a load that extends laterally beyond the wheels of a vehicle.
<i>allowed values:</i>	-999999					
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i>	-999999					
Load Class Type 1	1	-999999	REAL	Military Load Class	0	The dynamic live load weight-bearing capacity of a bridge or bridge span for one-way, wheeled vehicle traffic in MLC units. [Description] Military load classification values are calculated in part from the size, cross-sectional shape, and material of the stringers under the bridge span; they are similar to, but not the same as, short tons. See STANAGs 2021 and 2253 for the method of calculation.
<i>allowed values:</i>	-999999					
Load Class Type 2	1	-999999	REAL	Military Load Class	0	The dynamic live load weight-bearing capacity of a bridge or bridge span for two-way, wheeled vehicle traffic in MLC units. [Description] Military load classification values are calculated in part from the size, cross-sectional shape, and material of the stringers under the bridge span; they are similar to, but not the same as, short tons. See STANAGs 2021 and 2253 for the method of calculation.
<i>allowed values:</i>	-999999					

Load Class Type 3	1	-999999	REAL	Military Load Class	0	The dynamic live load weight-bearing capacity of a bridge or bridge span for one-way, tracked vehicle traffic in MLC units. [Description] Military load classification values are calculated in part from the size, cross-sectional shape, and material of the stringers under the bridge span; they are similar to, but not the same as, short tons. See STANAGs 2021 and 2253 for the method of calculation.
<i>allowed values:</i> -999999						
Load Class Type 4	1	-999999	REAL	Military Load Class	0	The dynamic live load weight-bearing capacity of a bridge or bridge span for two-way, tracked vehicle traffic in MLC units. [Description] Military load classification values are calculated in part from the size, cross-sectional shape, and material of the stringers under the bridge span; they are similar to, but not the same as, short tons. See STANAGs 2021 and 2253 for the method of calculation.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Mobile Bridge Span	1	No Information	Boolean	Unitless	0	An indication that a bridge span moves in some manner to allow passage underneath.
<i>allowed values:</i> FALSE			No Information			TRUE
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Overall Height of Bridge	1	-999999	REAL	Decimetre	0	Vertical distance measured from the lowest point at ground or water level to the highest portion of bridge (including superstructure).
<i>allowed values:</i> -999999						
Overhead Clearance	1	-999999	REAL	Metre	0	The least distance between the travelled way and any obstruction vertically above it. [Description] Reference STANAG 2253.
<i>allowed values:</i> -999999						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i>	<i>No Information</i>					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i>	<i>No Information</i>					
Roofed	1	No Information	Boolean	Unitless	0	An indication that a feature is covered by a roof. [Description] The roof may be supported by spaced pillars with intervening openings or the sides may be completely closed (for example: by walls or windows) and thus afford substantial protection from the weather.
<i>allowed values:</i>	<i>False</i>		<i>No Information</i>			<i>True</i>
Span Count	1	-999999	REAL	Unitless	0	The number of spans in a bridge.
<i>allowed values:</i>	<i>-999999</i>					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i>	<i>No Information</i>					
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i>	Aqueduct Pedestrian Runway		Canal Pipeline Taxiway			<i>No Information</i> Railway <i>Other</i> Road
Underbridge Clearance	1	-999999	REAL	Metre	0	Clearance below bridge, measured from the lowest surface level to the base of the lower of either a cross beam or the lowest bridge deck.
<i>allowed values:</i>	<i>-999999</i>					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i>	<i>No Information</i>					
Vertical Clearance, Safe	1	-999999	Real	Metre		The safe vertical clearance of an object measured from the horizontal plane toward the object overhead.
<i>allowed values:</i>	<i>-999999</i>					
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).

allowed values:	Aluminum	Brick	Concrete	Iron		
	Masonry	Metal	No Information	Other		
	Prestressed Concrete	Reinforced Concrete	Steel	Stone		
	Treated Timber	Wood				
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Bridge (Point 00)New ☐ Bridge

A structure that connects two locations and provides for the passage of a transportation route (for example: a road or a railway) over a terrain obstacle (for example: a waterbody, a gully, and/or a road). [Description] A bridge consists of a set of two abutments and/or zero or more bridge piers joined by bridge spans. A bridge may serve, for example, as an overpass or a viaduct. In the context of a bridge, the scope of the term 'transportation route' includes the transportation of liquids or gases by means of either pipelines or aqueducts.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
allowed values: False			No Information			True
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
allowed values: -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
Bridge Opening Type	1	No Information	Enumeration	Unitless	0	The type of structure or mechanism by which a bridge or bridge span is moved to allow passage of a vessel.
allowed values: Bascule No Information Submersible			Drawbridge Opening Swing-bridge			Fixed Other Lift-bridge Retractable
Bridge Reference Number	1	No Information	String	Unitless	24	The unique identifier of a bridge in accordance with the provisions of terrain analysis databases (for example: PTADB or TTADB). [Description] The identifier is assigned consecutively (for example: within a map sheet or within a local area of interest) and begins with the northwest grid square of the UTM reference system and proceeds from left to right to the east edge of the sheet or area, continuing consecutively in the same way starting back at the west edge of the next line of UTM grid squares below those previously completed. The resulting identifiers are used to index an associated Bridge Information Table.
allowed values: No Information						
Bridge Structure Type	3	No Information	Enumeration	Unitless	0	The type(s) of structural design of a bridge, bridge span, or bridge superstructure.

<i>allowed values:</i>	Arch Closed Spandrel Arch No Information Stringer Beam Transporter		Bowstring-bridge Covered Open Spandrel Arch Submersible Trestle		Cable Stayed Floating Other Suspension Truss	Cantilever Girder Slab Tower Suspension
Bypass Condition	1	No Information	Enumeration	Unitless	0	The ease or ability to circumvent a destroyed section of bridge, tunnel or pass within a distance of two kilometres from the feature. [Description] Bypass condition will not consider other bridges in bypass determination.
<i>allowed values:</i>	Difficult		Easy		Impossible	No Information
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i>	Civilian National Public		International No Information State		Joint Military and Civilian Other	Military Private
Deck Count	1	-999999	REAL	Unitless	0	The number of vertically stacked decks, one over another, in a transportation structure (for example: a bridge or a tunnel).
<i>allowed values:</i>	-999999					
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i>	No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational	Operational
New Feature Code	1	AQ040	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i>	AQ040					
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i>	No Information					
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i>	-999999					
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i>	-999999					
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i>	Accurate		Approximate		Doubtful	No Information
Horizontal Clearance	1	-999999	REAL	Metre	0	The distance available to pass a load that extends laterally beyond the wheels of a vehicle.
<i>allowed values:</i>	-999999					
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i>	-999999					
Load Class Type 1	1	-999999	REAL	Military Load Class	0	The dynamic live load weight-bearing capacity of a bridge or bridge span for one-way, wheeled vehicle traffic in MLC units. [Description] Military load classification values are calculated in part from the size, cross-sectional shape, and material of the stringers under the bridge span; they are similar to, but not the same as, short tons. See STANAGs 2021 and 2253 for the method of calculation.
<i>allowed values:</i>	-999999					

Load Class Type 2	1	-999999	REAL	Military Load Class	0	The dynamic live load weight-bearing capacity of a bridge or bridge span for two-way, wheeled vehicle traffic in MLC units. [Description] Military load classification values are calculated in part from the size, cross-sectional shape, and material of the stringers under the bridge span; they are similar to, but not the same as, short tons. See STANAGs 2021 and 2253 for the method of calculation.
<i>allowed values:</i> -999999						
Load Class Type 3	1	-999999	REAL	Military Load Class	0	The dynamic live load weight-bearing capacity of a bridge or bridge span for one-way, tracked vehicle traffic in MLC units. [Description] Military load classification values are calculated in part from the size, cross-sectional shape, and material of the stringers under the bridge span; they are similar to, but not the same as, short tons. See STANAGs 2021 and 2253 for the method of calculation.
<i>allowed values:</i> -999999						
Load Class Type 4	1	-999999	REAL	Military Load Class	0	The dynamic live load weight-bearing capacity of a bridge or bridge span for two-way, tracked vehicle traffic in MLC units. [Description] Military load classification values are calculated in part from the size, cross-sectional shape, and material of the stringers under the bridge span; they are similar to, but not the same as, short tons. See STANAGs 2021 and 2253 for the method of calculation.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Mobile Bridge Span	1	No Information	Boolean	Unitless	0	An indication that a bridge span moves in some manner to allow passage underneath.
<i>allowed values:</i> FALSE			No Information			TRUE
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Overall Height of Bridge	1	-999999	REAL	Decimetre	0	Vertical distance measured from the lowest point at ground or water level to the highest portion of bridge (including superstructure).
<i>allowed values:</i> -999999						
Overhead Clearance	1	-999999	REAL	Metre	0	The least distance between the travelled way and any obstruction vertically above it. [Description] Reference STANAG 2253.
<i>allowed values:</i> -999999						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Roofed	1	No Information	Boolean	Unitless	0	An indication that a feature is covered by a roof. [Description] The roof may be supported by spaced pillars with intervening openings or the sides may be completely closed (for example: by walls or windows) and thus afford substantial protection from the weather.
allowed values:	False		No Information			True
Span Count	1	-999999	REAL	Unitless	0	The number of spans in a bridge.
allowed values:	-999999					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
allowed values:	Aqueduct Pedestrian Runway		Canal Pipeline Taxiway			No Information Railway Other Road
Underbridge Clearance	1	-999999	REAL	Metre	0	Clearance below bridge, measured from the lowest surface level to the base of the lower of either a cross beam or the lowest bridge deck.
allowed values:	-999999					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Vertical Clearance, Safe	1	-999999	Real	Metre		The safe vertical clearance of an object measured from the horizontal plane toward the object overhead.
allowed values:	-999999					
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).

<i>allowed values:</i>	Aluminum	Brick	Concrete	Iron		
	Masonry	Metal	No Information	Other		
	Prestressed Concrete	Reinforced Concrete	Steel	Stone		
	Treated Timber	Wood				
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
---	---	----------------	--------	----------	-----	---

allowed values: No Information

Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
----------------------------	---	---------	------	-------	---	---

allowed values: -999999

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
-------------------	---	---------	------	-------	---	---

allowed values: -999999

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values: False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
allowed values: Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Safe Horizontal Clearance	1	-999999	REAL	Metre	0	Minimum safe horizontal distance between adjacent structures on either side of a navigable channel.
<i>allowed values:</i> -999999						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> Aqueduct Canal No Information Other Pedestrian Pipeline Railway Road Runway Taxiway						

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
allowed values: Aluminum Brick Concrete Iron Masonry Metal No Information Other Prestressed Concrete Reinforced Concrete Steel Stone Treated Timber Wood						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature BridgeSpan (Line 00)New ☐ Bridge Span**A component of the deck of a bridge spanning successive bridge piers.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
Bridge Opening Type	1	No Information	Enumeration	Unitless	0	The type of structure or mechanism by which a bridge or bridge span is moved to allow passage of a vessel.
allowed values: Bascule Drawbridge Fixed Lift-bridge No Information Opening Other Retractable Submersible Swing-bridge						
Bridge Reference Number	1	No Information	String	Unitless	24	The unique identifier of a bridge in accordance with the provisions of terrain analysis databases (for example: PTADB or TTADB). [Description] The identifier is assigned consecutively (for example: within a map sheet or within a local area of interest) and begins with the northwest grid square of the UTM reference system and proceeds from left to right to the east edge of the sheet or area, continuing consecutively in the same way starting back at the west edge of the next line of UTM grid squares below those previously completed. The resulting identifiers are used to index an associated Bridge Information Table.
allowed values: No Information						
Bridge Structure Type	3	No Information	Enumeration	Unitless	0	The type(s) of structural design of a bridge, bridge span, or bridge superstructure.
allowed values: Arch Bowstring-bridge Cable Stayed Cantilever Closed Spandrel Arch Floating Girder No Information Open Spandrel Arch Other Stringer Beam Submersible Suspension Tower Suspension Transporter Trestle Truss						
Bypass Condition	1	No Information	Enumeration	Unitless	0	The ease or ability to circumvent a destroyed section of bridge, tunnel or pass within a distance of two kilometres from the feature. [Description] Bypass condition will not consider other bridges in bypass determination.
allowed values: Difficult Easy Impossible No Information						

Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AQ045	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AQ045						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i> Accurate			Approximate			Doubtful No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Load Class Type 1	1	-999999	REAL	Military Load Class	0	The dynamic live load weight-bearing capacity of a bridge or bridge span for one-way, wheeled vehicle traffic in MLC units. [Description] Military load classification values are calculated in part from the size, cross-sectional shape, and material of the stringers under the bridge span; they are similar to, but not the same as, short tons. See STANAGs 2021 and 2253 for the method of calculation.
<i>allowed values:</i> -999999						
Load Class Type 2	1	-999999	REAL	Military Load Class	0	The dynamic live load weight-bearing capacity of a bridge or bridge span for two-way, wheeled vehicle traffic in MLC units. [Description] Military load classification values are calculated in part from the size, cross-sectional shape, and material of the stringers under the bridge span; they are similar to, but not the same as, short tons. See STANAGs 2021 and 2253 for the method of calculation.
<i>allowed values:</i> -999999						
Load Class Type 3	1	-999999	REAL	Military Load Class	0	The dynamic live load weight-bearing capacity of a bridge or bridge span for one-way, tracked vehicle traffic in MLC units. [Description] Military load classification values are calculated in part from the size, cross-sectional shape, and material of the stringers under the bridge span; they are similar to, but not the same as, short tons. See STANAGs 2021 and 2253 for the method of calculation.
<i>allowed values:</i> -999999						
Load Class Type 4	1	-999999	REAL	Military Load Class	0	The dynamic live load weight-bearing capacity of a bridge or bridge span for two-way, tracked vehicle traffic in MLC units. [Description] Military load classification values are calculated in part from the size, cross-sectional shape, and material of the stringers under the bridge span; they are similar to, but not the same as, short tons. See STANAGs 2021 and 2253 for the method of calculation.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.

<i>allowed values:</i> No Information						
Overhead Clearance	1	-999999	REAL	Metre	0	The least distance between the travelled way and any obstruction vertically above it. [Description] Reference STANAG 2253.
<i>allowed values:</i> -999999						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> <i>Damaged</i> <i>Destroyed</i> <i>Dismantled</i> <i>Intact</i> <i>No Information</i> <i>Ruined</i> <i>Site Preparation</i> <i>Under Construction</i> <i>Unmaintained</i>						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Prestressed Concrete Reinforced Concrete Steel Stone
Treated Timber Wood

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature BridgeSuperstructure (Area 00)

New ☐ Bridge Superstructure

A superstructure of a bridge, above the lowest deck, not including pylons or towers.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Bridge Reference Number	1	No Information	String	Unitless	24	The unique identifier of a bridge in accordance with the provisions of terrain analysis databases (for example: PTADB or TTADB). [Description] The identifier is assigned consecutively (for example: within a map sheet or within a local area of interest) and begins with the northwest grid square of the UTM reference system and proceeds from left to right to the east edge of the sheet or area, continuing consecutively in the same way starting back at the west edge of the next line of UTM grid squares below those previously completed. The resulting identifiers are used to index an associated Bridge Information Table.
<i>allowed values:</i> No Information						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AQ050	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AQ050						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.

<i>allowed values:</i> -999999							
Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.	
<i>allowed values:</i> -999999							
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.	
<i>allowed values:</i> -999999							
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<i>allowed values:</i> -999999							
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i> No Information							
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.	
<i>allowed values:</i> False							
New Physical Condition	1	No Information	No Information		True		
			Enumeration	Unitless	The physical state of a structure, or site, as a whole.		
<i>allowed values:</i> Damaged		Destroyed		Dismantled		Intact

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
<i>allowed values:</i> No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<i>allowed values:</i>	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
---------------------------------	---	----------------	--------	----------	----	---

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Brush (Area 00)

New ☐ Brush

A tract covered mainly by short, uncultured, woody plants. [Description] For example, covered by brush, scrub and/or shrubs. The predominant height is usually less than 2-3 metres.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.

allowed values: -999999

New Feature Code	1	EB070	CONSTRAINED_STRING	Unitless	5	Feature Code
------------------	---	-------	--------------------	----------	---	--------------

allowed values: EB070

Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
----------------------------	---	---------	------	-------	---	---

allowed values: -999999

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
-------------------	---	---------	------	-------	---	---

allowed values: -999999

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values: False No Information True						
Predominant Vegetation Height	1	-999999	REAL	Metre	0	The predominant height (the height of at least 50 percent) of the vegetation.
allowed values: -999999						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. Feature Building (Area 00)New ☐ Building

A free-standing self-supporting construction that is roofed, usually walled, and is intended for human occupancy (for example: a place of work or recreation) and/or habitation.
[Description] For example, a dormitory, a bank, and a restaurant.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
New Attached Building	1	No Information	Boolean	Unitless	0	An indication that a building is physically contiguous (for example: shares a common wall) with one or more adjacent buildings.
<i>allowed values:</i> FALSE			No Information			TRUE
Available POL	3	No Information	Enumeration	Unitless		The type(s) of petroleum, oils, and lubricants (POL) available at, or on the grounds of, a facility. [Description] POL include a variety of substances, including fuels used in motor vehicles, heating fuels, and lubricants used in vehicle and engine maintenance. Water for maintenance operations may be included.
<i>allowed values:</i> Benzene Diesel Propane Other			Benzene Propane Liquefied Petroleum Gas (LPG)			Diesel Benzene No Information Diesel Oil Not Applicable
Manufacturing Information : By-product	3	No Information	Enumeration	Unitless	0	The principal by-product(s) of a production, mining, or agricultural activity. [Description] If multiple by-products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Ash Other Sewage			Cinders Radioactive Material Slag			No Byproduct Refuse No Information Scrap-metal
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).

	<i>allowed values:</i>	Civilian National Public		International No Information State		Joint Military and Civilian Other		Military Private
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.	
	<i>allowed values:</i>	-999999						
New	Water Resource Information : Device Power Type	1	No Information	Enumeration	Unitless	0	The method by the device is powered, if any.	
	<i>allowed values:</i>	Compressed Air No Information		Electricity Other			Gravity Petroleum Product	Manual Steam
New	Water Resource Information : Device Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the device and the underlying ground (terrain), liquid or waterbody bottom.	
	<i>allowed values:</i>	Above Surface On Waterbody Bottom		Below Ground Surface Other			No Information Submerged	On Surface
	Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.	
	<i>allowed values:</i>	No Information Partially Operational		Non-operational Planned			Not in Operation Temporarily Non-operational	Operational
New	Feature Code	1	AL013	CONSTRAINED_STRING	Unitless	5	Feature Code	
	<i>allowed values:</i>	AL013						
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.

	Floor Count	1	-999999	REAL	Unitless	0	The number of floors in a structure (for example: a building).
	<i>allowed values:</i>	-999999					
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i>	No Information					
	Geographic Name Type	3	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i>	Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	
New	Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The type of designated hazard protection shelter based on the kind of emergency. [Description] These shelters may be inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
	<i>allowed values:</i>	Bomb Shelter Storm Shelter		Fallout Shelter		No Information Other	
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i>	-999999					
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i>	-999999					
	Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
	<i>allowed values:</i>	Accurate		Approximate		Doubtful No Information	
New	Hospital Bed Count	1	-999999	Integer	Unitless		The number of beds in a hospital.
	<i>allowed values:</i>	-999999					
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i>	-999999					
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.

<i>allowed values:</i> -999999							
New	Manufactured Building	1	No Information	Boolean	Unitless	0	An indication that a building is free-standing (detached) and self-contained and is built in a factory and then towed by a tractor to its semi-permanent site.
<i>allowed values:</i> FALSE			No Information				TRUE
New	Market Size	1	No Information	Enumeration	Unitless		Market Size
<i>allowed values:</i> Large Small			Medium			No Information	Not Applicable
New	Medical Facility	1	-999999	Integer	Unitless		MedicalFacility
<i>allowed values:</i> -999999							
New	Medical Specialty	1	No Information	String	Unitless	254	Medical Specialty
<i>allowed values:</i> No Information							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information							
New	Multi-unit Building	1	No Information	Boolean	Unitless	0	An indication that a building is divided into two or more distinct sets of rooms or other interior spaces that are internally fully-connected while being separated from each other and common areas by controlled access point(s) (for example: lockable doors) that enable physical privacy and security for its occupants.
<i>allowed values:</i> FALSE			No Information				TRUE
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information							
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information				True
New	Number Rooms	1	-999999	Integer	Unitless		Number of Rooms
<i>allowed values:</i> -999999							
New	Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999							
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation	Intact Under Construction
	Manufacturing Information : Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.

	<i>allowed values:</i>	Aircraft Biochemical Chemical Coke Cotton Electronic Equipment Fluorine Gas Ice Liquefied Natural Gas (LNG) Metal Munitions <i>Not Applicable</i> Paper Petroleum and/or Natural Gas Prestressed Concrete Salt Steel Uranium Wine	Aluminum Biodiesel Clothing Concrete Desalinated Water Explosive Food Glass Iron Liquefied Petroleum Gas (LPG) Milk <i>No Information</i> Nuclear Fuel Petrochemical Petroleum Lubricant Radioactive Material Sewage Sugar Vegetation Product Zinc	Ammunition Brick Coal Consumer Goods Electric Power Fertilizer Frozen Water Gold Lead Lumber Milled Grain No Product Olive Oil Petrol Phosphorus Rice Silver Textile Water	Asphalt Cement Coffee Copper Electrical Equipment Fish Fruit Heating Steam and/or Water Lime Manganese Motor Vehicle Non-solid Hydrocarbon Fuel <i>Other</i> Petroleum Plastic Rubber Snow Tobacco Whale Products				
New	Water Resource Information : Pump Type	1	No Information	Enumeration	Unitless		The type of pump used to move liquid or semi-liquid material from one location to another.		
	<i>allowed values:</i>	<i>Airlift</i> <i>No Information</i> <i>Turbine</i>	<i>Centrifugal</i> <i>Other</i> <i>Vacuum</i>			<i>Gravity</i> <i>Reciprocating</i>	<i>Jet</i> <i>Rotary</i>		
New	Water Resource Information : Purification Process	1	No Information	Enumeration	Unitless		Water purification process		
	<i>allowed values:</i>	<i>Blending</i> <i>Filtration</i> <i>No Information</i> <i>Vapor Compression</i>	<i>Desalination</i> <i>Freezing</i> <i>Other</i>			<i>Disinfection</i> <i>Multi-effect evaporation</i> <i>Reverse Osmosis</i>	<i>Electrolysis</i> <i>Multi-stage flash</i> <i>Sedimentation/coagulation</i>		
	Manufacturing Information : Raw Material	3	No Information	Enumeration	Unitless	0	The principal 'raw', or input, material(s) involved in a production activity. [Description] If multiple 'raw' materials are specified then they are usually listed in descending order of importance.		
	<i>allowed values:</i>	Aluminum Chemical Copper Gold Lumber No Raw Material Paper Radioactive Material Snow Tobacco Wood	Asphalt Clay Cotton Ice Manganese Oil Petroleum and/or Natural Gas Rubber Steel Uranium Zinc	Bauxite Coal Gas Iron Metal Ore Plant Material Sewage Sugar Vegetation	Cement Coke Glass Lead <i>No Information</i> <i>Other</i> Plastic Silver Textile Water				
	Religious Information : Religious Designation	1	No Information	Enumeration	Unitless	0	A designation denoting a religion or system of belief.		
	<i>allowed values:</i>	Buddhism Islam Orthodox Shia	Chaldean Judaism <i>Other</i> Shinto	Christian Nestorian Protestant Sunni	Hinduism <i>No Information</i> Roman Catholic				
	Religious Information : Religious Facility Type	1	No Information	Enumeration	Unitless	0	The type of a facility, building, structure or site that is designed and designated to be used for religious activities, based on its structure and/or the principal activity for which it was designed.		

<i>allowed values:</i>	Burial Site	Cathedral	Chapel	Church			
	Convent	Hermitage	Marabout	Minaret			
	Mission	Monastery	Mosque	No Information			
	<i>Not Applicable</i>	Noviciate	Other	Pagoda			
	Religious Community	Retreat	Seminary	Shrine			
	Stupa	Synagogue	Tabernacle	Temple			
New	Residence Configuration Type	1	No Information	Enumeration	Unitless	0	Configuration of a residence in regards to its structure or form.
<i>allowed values:</i>	<i>Apartment House</i>	<i>Attached House</i>	<i>Detached House</i>	<i>Manufactured House</i>			
	No Information	Other					
Restriction Information : Security Attributes Group (resource classification)		1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U							
Process Step Information : Resource Content Originator		1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<i>allowed values:</i>	Army Geographic Agency (Netherlands)	Army Geographic Centre (Spain)	Army Geographic Institute (Portugal)	Bundeswehr Geoinformation Office (Germany)

	U.S. Pacific Command (PACOM)	U.S. Southern Command (USSOUTHCOM)	U.S. Special Operations Command (USSOCOM)	U.S. Strategic Command (USSTRATCOM)			
	U.S. Transportation Command (USTRANSCOM)						
Restriction Information : Security Attributes Group (resource non-intelligence community markings)		1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information							
Restriction Information : Security Attributes Group (resource owner-producer)		1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information							
	Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i>	Conical	Domed	Flat	Flat with Clerestory			
	Flat with Parapet	No Information	Other	Pitched			
	Pitched with Clerestory	Pyramidal	Sawtoothed	Semi-cylindrical			
	With Clerestory	With Cupola	With Minaret	With Smokestack			
	With Steeple	With Tower	With Turret				
Specified Domain Values(s)		1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information							

New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
	<u>allowed values:</u>	-999999					
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
	<u>allowed values:</u>	-999999					
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.
	<u>allowed values:</u>	-999999					
New	Total Staff	1	-999999	Integer	Unitless		Total Staff
	<u>allowed values:</u>	-999999					
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units		The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<u>allowed values:</u>	-999999					
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<u>allowed values:</u>	No Information					
	Vehicle Capacity	1	-999999	Integer	Unitless		The number of vehicles that a feature can accommodate.
	<u>allowed values:</u>	-999999					
	Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
	<u>allowed values:</u>	Adobe Brick Fibreglass Metal Plant Material Steel		Aluminum Glass Mud-based Construction Prestressed Concrete Stone		Brick Iron No Information Reinforced Concrete Treated Timber	Concrete Masonry Other Sod Wood
	Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
	<u>allowed values:</u>	No Information					
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime		The electrical conductivity of water.
	<u>allowed values:</u>	-999999					
New	Water Resource Information : Water Flow	1	-999999	Real	Cubic Metres per Hours		The rate of water flow through or exiting from a feature.
	<u>allowed values:</u>	-999999					
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre		The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<u>allowed values:</u>	-999999					
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless		The potability of water based on the type of treatment required before it is safe for human consumption.
	<u>allowed values:</u>	Contaminated Potable		No Information Treatable		Nonpotable	Other
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.

	<i>allowed values:</i>	Alkaline Mineral Saline		Brackish No Information Seawater		Brine Not Applicable		Fresh Other
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.		
	<i>allowed values:</i>	Agricultural Irrigation Institutional Other		Commercial Livestock Power Generation		Domestic Irrigation Municipal Recreational		Industrial No Information Sanitary Domestic
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.	
	<i>allowed values:</i>	-999999						
New	Window Type	1	No Information	Enumeration	Unitless	0	Type of Window	
	<i>allowed values:</i>	No Information Plastic with Bars		Open with Bars Plastic without Bars		Open without Bars		Other
New	Windows Per Story	1	-999999	Integer	Unitless	0	Number of windows per story	
	<i>allowed values:</i>	-999999						
	Wireless Telecommunication Information : Wireless Telecommunication Type	1	No Information	Enumeration	Unitless	0	The type of a wireless telecommunication service based on the mechanism(s) of transmission and/or the nature of the communication(s) supported. [Description] For example, radio broadcast or mobile phone service.	
	<i>allowed values:</i>	Cellular Phone Other Television (TV)		Microwave Radio Relay Radio Broadcast		Mobile Phone Radio Telephone		No Information Radio-telegraph

Feature Building (Point 00)

New ☐ Building

A free-standing self-supporting construction that is roofed, usually walled, and is intended for human occupancy (for example: a place of work or recreation) and/or habitation.
[Description] For example, a dormitory, a bank, and a restaurant.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False						
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						

	Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
	<i>allowed values:</i>	-999999					
New	Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
	<i>allowed values:</i>	-999999					
New	Attached Building	1	No Information	Boolean	Unitless	0	An indication that a building is physically contiguous (for example: shares a common wall) with one or more adjacent buildings.
	<i>allowed values:</i>	FALSE		No Information		TRUE	
	Available POL	3	No Information	Enumeration	Unitless		The type(s) of petroleum, oils, and lubricants (POL) available at, or on the grounds of, a facility. [Description] POL include a variety of substances, including fuels used in motor vehicles, heating fuels, and lubricants used in vehicle and engine maintenance. Water for maintenance operations may be included.
	<i>allowed values:</i>	Benzene Diesel Propane Other		Benzene Propane Liquefied Petroleum Gas (LPG)		Diesel Benzene No Information Diesel Oil Not Applicable	
	Manufacturing Information : By-product	3	No Information	Enumeration	Unitless	0	The principal by-product(s) of a production, mining, or agricultural activity. [Description] If multiple by-products are specified then they are usually listed in descending order of importance.
	<i>allowed values:</i>	Ash Other Sewage		Cinders Radioactive Material Slag		No Byproduct Refuse No Information Scrap-metal	
New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<i>allowed values:</i>	-999999					
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<i>allowed values:</i>	-999999					
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i>	Civilian National Public		International No Information State		Joint Military and Civilian Other Military Private	
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN ⁻ . These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i>	-999999					
New	Water Resource Information : Device Power Type	1	No Information	Enumeration	Unitless	0	The method by the device is powered, if any.
	<i>allowed values:</i>	Compressed Air No Information		Electricity Other		Gravity Petroleum Product Manual Steam	
New	Water Resource Information : Device Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the device and the underlying ground (terrain), liquid or waterbody bottom.
	<i>allowed values:</i>	Above Surface On Waterbody Bottom		Below Ground Surface Other		No Information Submerged On Surface	
	Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
	<i>allowed values:</i>	No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational Operational	
New	Feature Code	1	AL013	CONSTRAINED_ STRING	Unitless	5	Feature Code
	<i>allowed values:</i>	AL013					
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.

	Floor Count	1	-999999	REAL	Unitless	0	The number of floors in a structure (for example: a building).
	<i>allowed values:</i>	-999999					
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i>	No Information					
	Geographic Name Type	3	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i>	Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	
New	Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The type of designated hazard protection shelter based on the kind of emergency. [Description] These shelters may be inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
	<i>allowed values:</i>	Bomb Shelter Storm Shelter		Fallout Shelter		No Information Other	
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i>	-999999					
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i>	-999999					
	Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
	<i>allowed values:</i>	Accurate		Approximate		Doubtful No Information	
New	Hospital Bed Count	1	-999999	Integer	Unitless		The number of beds in a hospital.
	<i>allowed values:</i>	-999999					
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i>	-999999					
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.

<u>allowed values:</u> -999999							
New	Manufactured Building	1	No Information	Boolean	Unitless	0	An indication that a building is free-standing (detached) and self-contained and is built in a factory and then towed by a tractor to its semi-permanent site.
<u>allowed values:</u> FALSE							
New	Market Size	1	No Information	Enumeration	Unitless		Market Size
<u>allowed values:</u> Large Small							
Medium							
No Information							
Not Applicable							
New	Medical Facility	1	-999999	Integer	Unitless		MedicalFacility
<u>allowed values:</u> -999999							
New	Medical Specialty	1	No Information	String	Unitless	254	Medical Specialty
<u>allowed values:</u> No Information							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information							
New	Multi-unit Building	1	No Information	Boolean	Unitless	0	An indication that a building is divided into two or more distinct sets of rooms or other interior spaces that are internally fully-connected while being separated from each other and common areas by controlled access point(s) (for example: lockable doors) that enable physical privacy and security for its occupants.
<u>allowed values:</u> FALSE							
No Information							
TRUE							
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information							
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False							
No Information							
True							
New	Number Rooms	1	-999999	Integer	Unitless		Number of Rooms
<u>allowed values:</u> -999999							
New	Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<u>allowed values:</u> -999999							
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<u>allowed values:</u> Damaged							
No Information							
Unmaintained							
Destroyed							
Ruined							
Dismantled							
Site Preparation							
Intact							
Under Construction							
	Manufacturing Information : Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.

	<i>allowed values:</i>	Aircraft Biochemical Chemical Coke Cotton Electronic Equipment Fluorine Gas Ice Liquefied Natural Gas (LNG) Metal Munitions <i>Not Applicable</i> Paper Petroleum and/or Natural Gas Prestressed Concrete Salt Steel Uranium Wine	Aluminum Biodiesel Clothing Concrete Desalinated Water Explosive Food Glass Iron Liquefied Petroleum Gas (LPG) Milk <i>No Information</i> Nuclear Fuel Petrochemical Petroleum Lubricant Radioactive Material Sewage Sugar Vegetation Product Zinc	Ammunition Brick Coal Consumer Goods Electric Power Fertilizer Frozen Water Gold Lead Lumber Milled Grain No Product Olive Oil Petrol Phosphorus Rice Silver Textile Water	Asphalt Cement Coffee Copper Electrical Equipment Fish Fruit Heating Steam and/or Water Lime Manganese Motor Vehicle Non-solid Hydrocarbon Fuel <i>Other</i> Petroleum Plastic Rubber Snow Tobacco Whale Products		
New	Water Resource Information : Pump Type	1	No Information	Enumeration	Unitless		The type of pump used to move liquid or semi-liquid material from one location to another.
	<i>allowed values:</i>	<i>Airlift</i> <i>No Information</i> <i>Turbine</i>	<i>Centrifugal</i> <i>Other</i> <i>Vacuum</i>			<i>Gravity</i> <i>Reciprocating</i>	<i>Jet</i> <i>Rotary</i>
New	Water Resource Information : Purification Process	1	No Information	Enumeration	Unitless		Water purification process
	<i>allowed values:</i>	<i>Blending</i> <i>Filtration</i> <i>No Information</i> <i>Vapor Compression</i>	<i>Desalination</i> <i>Freezing</i> <i>Other</i>			<i>Disinfection</i> <i>Multi-effect evaporation</i> <i>Reverse Osmosis</i>	<i>Electrolysis</i> <i>Multi-stage flash</i> <i>Sedimentation/coagulation</i>
	Manufacturing Information : Raw Material	3	No Information	Enumeration	Unitless	0	The principal 'raw', or input, material(s) involved in a production activity. [Description] If multiple 'raw' materials are specified then they are usually listed in descending order of importance.
	<i>allowed values:</i>	Aluminum Chemical Copper Gold Lumber No Raw Material Paper Radioactive Material Snow Tobacco Wood	Asphalt Clay Cotton Ice Manganese Oil Petroleum and/or Natural Gas Rubber Steel Uranium Zinc	Bauxite Coal Gas Iron Metal Ore Plant Material Sewage Sugar Vegetation	Cement Coke Glass Lead <i>No Information</i> <i>Other</i> Plastic Silver Textile Water		
	Religious Information : Religious Designation	1	No Information	Enumeration	Unitless	0	A designation denoting a religion or system of belief.
	<i>allowed values:</i>	Buddhism Islam Orthodox Shia	Chaldean Judaism <i>Other</i> Shinto	Christian Nestorian Protestant Sunni	Hinduism <i>No Information</i> Roman Catholic		
	Religious Information : Religious Facility Type	1	No Information	Enumeration	Unitless	0	The type of a facility, building, structure or site that is designed and designated to be used for religious activities, based on its structure and/or the principal activity for which it was designed.

<i>allowed values:</i>	Burial Site	Cathedral	Chapel	Church			
	Convent	Hermitage	Marabout	Minaret			
	Mission	Monastery	Mosque	No Information			
	Not Applicable	Noviciate	Other	Pagoda			
	Religious Community	Retreat	Seminary	Shrine			
	Stupa	Synagogue	Tabernacle	Temple			
New	Residence Configuration Type	1	No Information	Enumeration	Unitless	0	Configuration of a residence in regards to its structure or form.
<i>allowed values:</i>	Apartment House	Attached House	Detached House	Manufactured House			
	No Information	Other					
Restriction Information : Security Attributes Group (resource classification)		1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U							
Process Step Information : Resource Content Originator		1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<i>allowed values:</i>	Army Geographic Agency (Netherlands)	Army Geographic Centre (Spain)	Army Geographic Institute (Portugal)	Bundeswehr Geoinformation Office (Germany)			
	Defence Acquisition and Logistics Organization (Denmark)	Defence Geographic Centre Intelligence Collection Group (United Kingdom)	Defence Imagery and Geospatial Organisation (Australia)	Defense Information Security (Italy)

	U.S. Marine Corps	U.S. National Civil Applications Program (NCAP)	U.S. National Geospatial-Intelligence Agency (NGA)	U.S. National Oceanic and Atmospheric Administration			
	U.S. National Reconnaissance Office (NRO)	U.S. National Security Agency (NSA)	U.S. Navy	U.S. Northern Command (USNORTHCOM)			
	U.S. Pacific Command (PACOM)	U.S. Southern Command (USSOUTHCOM)	U.S. Special Operations Command (USSOCOM)	U.S. Strategic Command (USSTRATCOM)			
	U.S. Transportation Command (USTRANSCOM)						
Restriction Information : Security Attributes Group (resource non-intelligence community markings)		1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information							
Restriction Information : Security Attributes Group (resource owner-producer)		1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information							
Roof Shape		3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i>	Conical	Domed	Flat	Flat with Clerestory			
	Flat with Parapet	No Information	Other	Pitched			
	Pitched with Clerestory	Pyramidal	Sawtoothed	Semi-cylindrical			
	With Clerestory	With Cupola	With Minaret	With Smokestack			
	With Steeple	With Tower	With Turret				
Specified Domain Values(s)		1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information							

New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
	<u>allowed values:</u>	-999999					
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
	<u>allowed values:</u>	-999999					
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.
	<u>allowed values:</u>	-999999					
New	Total Staff	1	-999999	Integer	Unitless		Total Staff
	<u>allowed values:</u>	-999999					
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units		The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<u>allowed values:</u>	-999999					
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<u>allowed values:</u>	No Information					
	Vehicle Capacity	1	-999999	Integer	Unitless		The number of vehicles that a feature can accommodate.
	<u>allowed values:</u>	-999999					
	Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
	<u>allowed values:</u>	Adobe Brick Fibreglass Metal Plant Material Steel		Aluminum Glass Mud-based Construction Prestressed Concrete Stone		Brick Iron No Information Reinforced Concrete Treated Timber	Concrete Masonry Other Sod Wood
	Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
	<u>allowed values:</u>	No Information					
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime		The electrical conductivity of water.
	<u>allowed values:</u>	-999999					
New	Water Resource Information : Water Flow	1	-999999	Real	Cubic Metres per Hours		The rate of water flow through or exiting from a feature.
	<u>allowed values:</u>	-999999					
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre		The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<u>allowed values:</u>	-999999					
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless		The potability of water based on the type of treatment required before it is safe for human consumption.
	<u>allowed values:</u>	Contaminated Potable		No Information Treatable		Nonpotable	Other
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.

	<i>allowed values:</i>	Alkaline Mineral Saline		Brackish No Information Seawater		Brine Not Applicable	Fresh Other
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.	
	<i>allowed values:</i>	Agricultural Irrigation Institutional Other		Commercial Livestock Power Generation		Domestic Irrigation Municipal Recreational	Industrial No Information Sanitary Domestic
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
	<i>allowed values:</i>	-999999					
New	Window Type	1	No Information	Enumeration	Unitless	0	Type of Window
	<i>allowed values:</i>	No Information Plastic with Bars		Open with Bars Plastic without Bars		Open without Bars	Other
New	Windows Per Story	1	-999999	Integer	Unitless	0	Number of windows per story
	<i>allowed values:</i>	-999999					
	Wireless Telecommunication Information : Wireless Telecommunication Type	1	No Information	Enumeration	Unitless	0	The type of a wireless telecommunication service based on the mechanism(s) of transmission and/or the nature of the communication(s) supported. [Description] For example, radio broadcast or mobile phone service.
	<i>allowed values:</i>	Cellular Phone Other Television (TV)		Microwave Radio Relay Radio Broadcast		Mobile Phone Radio Telephone	No Information Radio-telegraph

Feature BuildingSuperstructure (Area 00)

New ☐ Building Superstructure

A supplemental portion of a building which rises from the roof but is not considered to be a portion of the roof.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Building Superstructure Type	1	No Information	Enumeration	Unitless	0	The type of a superstructure that extends above the general roofline of a building.

<i>allowed values:</i>		Chimney Elevator Machine Room No Information Roof Deck Steeple	Clerestory HVAC Equipment Ornamental Element Roof Garden Tower	Cupola Lightning Rod Other Signage Turret	Dome Minaret Parapet Skylight
Facility Operational Status	1	No Information	Enumeration	Unitless	The status of operation of a facility, as a whole.
<i>allowed values:</i>	No Information Partially Operational		Non-operational Planned	Not in Operation Temporarily Non-operational	Operational
New Feature Code	1	AL018	CONSTRAINED_ STRING	Unitless	5
<i>allowed values:</i>	AL018				
Geographic Name Information : Full Name	1	No Information	String	Unitless	200
<i>allowed values:</i>	No Information				
Height Above Surface Level	1	-999999	REAL	Metre	0

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Building Superstructure Type	1	No Information	Enumeration	Unitless	0	The type of a superstructure that extends above the general roofline of a building.
<i>allowed values:</i> Chimney Elevator Machine Room No Information Roof Deck Steeple			Clerestory HVAC Equipment Ornamental Element Roof Garden Tower			Cupola Lightning Rod Other Signage Turret Dome Minaret Parapet Skylight
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AL018	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL018						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values: False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
allowed values: Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<u>allowed values:</u> <i>-999999</i>							
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<u>allowed values:</u> No Information							
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<u>allowed values:</u> No Information							
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.	
<u>allowed values:</u> <i>False</i>			<i>No Information</i>			<i>True</i>	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.	
<u>allowed values:</u> <i>Damaged</i> No Information <i>Unmaintained</i>			<i>Destroyed</i> <i>Ruined</i>			<i>Dismantled</i> <i>Site Preparation</i>	<i>Intact</i> <i>Under Construction</i>
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
<u>allowed values:</u> <i>U</i>							
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature BuiltUpArea (Area 00) New ☐ Built-up Area

A tract containing a concentration of buildings and/or other structures.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
BGN Administrative Level	1	No Information	Enumeration	Unitless	0	The level of an administrative division of a country as established by the U.S. Board on Geographic Names (BGN). [Description] The BGN is a management body established to maintain uniform geographic name usage throughout the U.S. Government.
<i>allowed values:</i> Fifth-order Other			First-order Second-order			Fourth-order Third-order No Information
Built-up Area Density Category	1	No Information	Enumeration	Unitless	0	A general evaluation of the density of a built-up area, as a category.
<i>allowed values:</i> Dense			Moderate			No Information Sparse
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AL020	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL020						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Adult Entertainment Institution Recreation Utilities			Commerce Manufacturing Religious Activities			Defence Activities No Information Residence Food Product Manufacture Other Telecommunications
Geographic Name Information : (second) Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information <i>allowed values:</i> No Information <i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

Feature Buoy (Point 00)New ☐ Buoy**A floating object moored to the bottom in a particular place, as an aid to navigation or for other specific purposes.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Beacon Type	1	No Information	Enumeration	Unitless		The type of a beacon based on its significance to maritime navigation.
<i>allowed values:</i> Articulated Beacon Other			Mooring			No Information Not Applicable
Broadcast Frequency	1	-999999	Integer	Hertz		The transmission frequency of a radio communications device (for example: a television station or a radiobeacon).
<i>allowed values:</i> -999999						
Buoy Shape	1	No Information	Enumeration	Unitless		The principal shape and/or design of a buoy.
<i>allowed values:</i> Barrel Other			Conical Pillar			Diamond Spar No Information Super-buoy
Buoy Type	1	No Information	Enumeration	Unitless		The type(s) of a buoy based on its significance to maritime navigation.
<i>allowed values:</i> Large Automatic Navigation Buoy Other			Light Float			No Information Ocean Data Acquisition System (ODAS) Buoy
Character of Light	1	No Information	Constrained_String	Unitless	254	The characteristic description of a maritime light or lights at one geographic position that includes its class, number and color(s) of flashes or occultations. [Description] This text is structured as it traditionally has been represented on a paper chart.
<i>allowed values:</i> No Information						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BC020	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BC020						
Fog Signal Type	1	No Information	Enumeration	Unitless		The type of a fog signal based on its signal characteristics and method of generation.
<i>allowed values:</i> Bell Horn Other			Diaphone No Information Reed			Explosive None Siren Gong Not Applicable Whistle
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Light Elevation	1	-999999	Real	Metre		The height of a light measured from a specified datum (for example: vertical or sounding), usually high water, as defined by the National agency. [Description] When used with a buoy the elevation is measured from the water surface; when used with a lighthouse the elevation is typically measured from ground level.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						

Multiple Light Ranges	1	No Information	Constrained_String	Unitless	254	A set of two numbers for light ranges of visibility (at a light) expressed in nautical miles.
<i>allowed values:</i>	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i>	No Information					
Navigation Mark Colour	3	No Information	Enumeration	Unitless		The colour(s) of a International Association of Lighthouse Authorities (IALA) navigation mark. [Description] When the navigation mark is patterned, the Attribute: 'Colour Pattern' may be used to identify the pattern and a corresponding list of colours specified.
<i>allowed values:</i>	Black Grey Red		Blue No Information Violet		Brown Orange White	
Navigation System Type	3	No Information	Enumeration	Unitless		The type(s) of equipment or system used in electronic navigation.
<i>allowed values:</i>	Circular Radio Beacon None Radar Responder Beacon (RACON) Unspecified Radio Beacon		Directional Radiobeacon Other Radar Station		No Information QTG Station (R) Radio Direction Finding	
<i>allowed values:</i>					Non-Directional Radio Beacon (NDB) Radar Marker (RAMARK) Rotating Loop Radio Beacon	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i>	Damaged No Information Unmaintained		Destroyed Ruined		Dismantled Site Preparation	
Primary Operating Range	1	-999999	Real	Nautical Mile		The primary range of the NAVAID beyond which the capture of the signal is not completely assured.
<i>allowed values:</i>	-999999					
Radar Reflector Present	1	No Information	Boolean	Unitless	0	An indication that an object has an associated radar reflector.
<i>allowed values:</i>	FALSE		No Information		TRUE	
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i>	U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<i>allowed values:</i>	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Second Broadcast Frequency	1	-999999	Integer	Hertz		The alternate or second transmission frequency of a radio communications device (for example: a television station, a radiobeacon). [Description] Used for additional, alternate, and/or backup transmissions.
<i>allowed values:</i> -999999						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Structure Shape	1	No Information	Enumeration	Unitless	0	The geometric form, appearance, and/or configuration of the feature as a whole.
<i>allowed values:</i> Cylindrical on Tower			No Information			Other Spherical
Topmark Shape	1	No Information	Enumeration	Unitless		The characteristic topmark or daymark shape attached to a maritime aid to navigation to aid identification. [Description] May be secured at the top of a buoy or beacon.
<i>allowed values:</i> 2 Cones Base to Base 2 Spheres One over Other Besom Point Upward Cone over Ball Diamond Not Applicable			2 Cones Point to Point Ball (Filled) Can (Filled) Cone Point Downward Diamond over Ball Other			2 Cones Points Downward Ball (Open) Can (Open) Cone Point Upward Double Cone, Points Apart (Open) Upright Cross 2 Cones Points Upward Ball over Cone Can over Ball Cross Over Ball (Filled) No Information X-shaped
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

allowed values: No Information

Feature Cable (Line 00)New ☐ Cable

A single continuous rope-like bundle consisting of multiple strands. [Description] The strands may be individually insulated and/or protected and the cable as a whole sheathed. Cables may be used for load bearing (for example, supporting or suspending equipment and/or structures), transmitting electrical power, and/or communicating signals (for example, by electrical or optical means).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Cable Suspended Shape	1	No Information	Enumeration	Unitless	0	The shape assumed by a cable suspended by a series of pylons.
<i>allowed values:</i> Mountain Catenary Symmetric Catenary			No Information			Other Overwater Catenary

Cable Type	3	No Information	Enumeration	Unitless	0	The type of a cable based on its use.
<i>allowed values:</i>	Barrier Guide Power Line Tethering		Communication Line Load Bearing Restraining Towing			Digital Communication Line No Information Telegraph Transmission Line Fibre-optic Other Telephone
Contained within Service Tunnel	1	No Information	Boolean	Unitless	0	The object (for example: a telecommunication cable or a power line) is located within a service tunnel.
<i>allowed values:</i>	False		No Information			True
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i>	Civilian National Public		International No Information State			Joint Military and Civilian Other Military Private
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values:</i>	-999999					
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i>	No Information Partially Operational		Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AT005	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i>	AT005					
Floating	1	No Information	Boolean	Unitless	0	An indication that an object is floating.
<i>allowed values:</i>	False		No Information			True
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i>	No Information					
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i>	-999999					
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i>	-999999					
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i>	Accurate		Approximate			Doubtful No Information
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i>	-999999					
Isolated	1	No Information	Boolean	Unitless	0	An indication that a feature (for example: a structure) is in the open by itself, isolated from other features of a similar type, and thus is visually distinct from surrounding features when viewed from a distance.
<i>allowed values:</i>	FALSE		No Information			TRUE
New Least Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling.
<i>allowed values:</i>	-999999					

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False			No Information			True
Overhead Clearance	1	-999999	REAL	Metre	0	The least distance between the travelled way and any obstruction vertically above it. [Description] Reference STANAG 2253.
<u>allowed values:</u> -999999						
Parallel Line Count	1	-999999	REAL	Unitless	0	The total number of nominally parallel lines within the feature.
<u>allowed values:</u> -999999						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<u>allowed values:</u> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Power Line Maximum Voltage	1	-999999	REAL	Kilovolt	0	The maximum voltage at which a power line is designed to operate.
<u>allowed values:</u> -999999						
Predominant Feature Height	1	-999999	REAL	Metre	0	The predominant height (the height of at least 50 percent) of the feature measured from the lowest point of the base at ground or water level (downhill side/downstream side).
<u>allowed values:</u> -999999						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature Cableway (Line 00) New ☐ Cableway

A transportation system consisting of load cables strung between pylons on which carrier units (for example: cars or buckets intended to transport people, material, and/or equipment) are suspended. [Description] For example, a ski-lift.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Cable Suspended Shape	1	No Information	Enumeration	Unitless	0	The shape assumed by a cable suspended by a series of pylons.
<i>allowed values:</i> Mountain Catenary Symmetric Catenary			No Information			Other Overwater Catenary
Cableway Type	1	No Information	Enumeration	Unitless	0	The type of a cableway based on structure and/or function.
<i>allowed values:</i> Aerial Tramway Material Tramway T-bar Lift			Chair-lift No Information			Gondola Lift Other Industrial Ropeway Ski Tow
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AT041	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AT041						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Manufacturing Transport			No Information			Other Recreation
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i>	-999999					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i>	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i>	No Information					
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i>	False		No Information		True	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i>	Damaged		Destroyed		Dismantled	
	No Information		Ruined		Intact	
	Unmaintained				Site Preparation	
					Under Construction	
Predominant Feature Height	1	-999999	REAL	Metre	0	The predominant height (the height of at least 50 percent) of the feature measured from the lowest point of the base at ground or water level (downhill side/downstream side).
<i>allowed values:</i>	-999999					
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i>	U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<i>allowed values:</i>	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)					Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i>	No Information					

Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
<i>allowed values:</i> No Information						
Waterbody Overhead Obstruction	1	No Information	Boolean	Unitless	0	An indication that an object is an overhead obstruction over a navigable waterbody.
<i>allowed values:</i> False						
<i>allowed values:</i> No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature Cairn (Point 00)New ☐ Cairn**A heap of stones piled up as a memorial or a landmark.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information						
<i>allowed values:</i> Partially Operational						
New Feature Code	1	AL025	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL025						

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AI030	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AI030						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Defence Activities No Information Residence			Forestry and/or Logging Other			Migrant Labour Petroleum and/or Gas Extraction Mining and Quarrying Refugee Shelter
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.

<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False						
Nomadic Seasonal Location	3	No Information	Enumeration	Unitless	0	The season(s) in which a nomadic people are camped at a given location.
<i>allowed values:</i> Autumn Summer

Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature Canal (Area 00)

New ☐ Canal

An artificial waterway with no flow, or a controlled flow, usable or built for navigation.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Inland Waterbody Bank (1) : Above Water Bank Slope (first bank)	1	-999999	REAL	Percent	0	The amount of upward inclination between the horizontal surface of the mean water level of a watercourse where it touches the bank and the top of the first usable break in slope, measured at the same point on the upper bank as the military gap width. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
<i>allowed values:</i> -999999						
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
Average Water Depth	1	[-999999,-999999]	Real_Interval	Metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999,-999999]						
Inland Waterbody Bank (1) : Bank Orientation (first bank)	1	No Information	Enumeration	Unitless	0	The relative orientation of a bank of an inland waterbody based on the direction of predominant water flow in the adjacent waterbody.
<i>allowed values:</i> Indeterminate			Left			No Flow
<i>allowed values:</i> Other			Right			No Information
<i>allowed values:</i> Indeterminate			Left			No Flow
<i>allowed values:</i> Other			Right			No Information
Inland Waterbody Bank (2) : Bottom Material Type (second bank)	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing the bottom of a body of water.
<i>allowed values:</i> Bedrock			Clay and Silt			Concrete
<i>allowed values:</i> Gravel and Cobble			Masonry			No Information
<i>allowed values:</i> Paved			Peat			Reinforced Concrete
<i>allowed values:</i> Sand			Sand and Gravel			Sand over Mud
<i>allowed values:</i> Slash			Soil			
<i>allowed values:</i> Bedrock			Clay and Silt			Concrete
<i>allowed values:</i> Gravel and Cobble			Masonry			No Information
<i>allowed values:</i> Paved			Peat			Reinforced Concrete
<i>allowed values:</i> Sand			Sand and Gravel			Sand over Mud
<i>allowed values:</i> Slash			Soil			
<i>allowed values:</i> Bedrock			Clay and Silt			Concrete
<i>allowed values:</i> Gravel and Cobble			Masonry			No Information
<i>allowed values:</i> Paved			Peat			Reinforced Concrete
<i>allowed values:</i> Sand			Sand and Gravel			Sand over Mud
<i>allowed values:</i> Slash			Soil			
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999						
Contained within Tunnel	1	No Information	Boolean	Unitless	0	The object is at least partially located within, or passes through, a tunnel. [Description] For example, a canal passing through a tunnel.

<u>allowed values:</u> <i>False</i>		No Information		<i>True</i>		
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<u>allowed values:</u>	Civilian National Public		International No Information State			Joint Military and Civilian Other Military Private
Covered Drain	1	No Information	Boolean	Unitless	0	An indication that a watercourse section is completely covered over and connects to uncovered watercourses at each end.
<u>allowed values:</u> <i>False</i>		No Information		<i>True</i>		
Covered Drain Length	1	-999999	Real	Metre	0	The length of a watercourse section that is completely covered over and connects to uncovered watercourses at each end.
<u>allowed values:</u> <i>-999999</i>						
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<u>allowed values:</u> <i>-999999</i>						
Deck Level	1	-999999	REAL	Unitless	0	The relative level of a deck within a set of vertically stacked decks, one over another, in a transportation structure (for example: on a bridge or in a tunnel). [Description] The lowest deck is numbered '1' and the remaining decks are numbered in ascending order (bottom to top) with the uppermost deck being assigned the highest value.
<u>allowed values:</u> <i>-999999</i>						
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<u>allowed values:</u> <i>-999999</i>						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a facility, as a whole.
<u>allowed values:</u>	No Information Partially Operational		Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	BH020	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> <i>BH020</i>						
Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> <i>No Information</i>						
Geographic Name Type	3	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<u>allowed values:</u>	Conventional Other		Historical Transliterated Provisional			Native Transliterated Unverified Transliterated No Information Variant Transliterated
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> <i>-999999</i>						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> <i>-999999</i>						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<u>allowed values:</u>	Accurate		Approximate			Doubtful No Information
Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<u>allowed values:</u> <i>-999999</i>						
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.

Wednesday, July 13, 2011 Page 239 of 1548

<i>allowed values:</i> (0.5, 1.5] [-999999, -999999]			(1.5, 2.5] [-999999, -999999]			(2.5, INFINITY)	(-INFINITY, 0.5]
Predominant Minimum Water Depth	1	[-999999, -999999]	Real_Interval	Metre	0	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.	
<i>allowed values:</i> (0.8, 1.6] [-999999, -999999]			(1.6, 2.4] [-999999, -999999]			(2.4, INFINITY)	(-INFINITY, 0.8]
Predominant Minimum Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second	0	The average minimum (seasonal low water) water velocity, exclusive of high water due to runoff or low water due to drought.	
<i>allowed values:</i> (1.5, 1.5] [-999999, -999999]			(1.5, 2.5] [-999999, -999999]			(2.5, INFINITY)	(-INFINITY, 0.5]
Predominant Water Depth	1	-999999	Real	Metre		The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.	
<i>allowed values:</i> -999999							
Inland Waterbody Bank (1) : Predominant Waterbody Bank Height (first bank)	1	[-999999, -999999]	REAL_Interval	Metre	0	The predominant height (the height of at least 50 percent) of the bank, measured from mean water level to the first break in slope above the mean water level.	
<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval	Greater-than Semi-interval Less-than Semi-interval
<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval	Greater-than Semi-interval Less-than Semi-interval
Inland Waterbody Bank (1) : Predominant Waterbody Bank Slope (first bank)	1	[-999999, -999999]	REAL_Interval	Percent	0	The predominant slope (the slope of at least 50 percent) of the bank, measured from mean water level to the first accessible break in slope above the mean water level. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.	
<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval	Greater-than Semi-interval Less-than Semi-interval
<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval	Greater-than Semi-interval Less-than Semi-interval
Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).	
<i>allowed values:</i> Depressed Raised			Level			No Information	Not Applicable
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
<i>allowed values:</i> U							
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

	Sandy			Shingly			Stony		
Specified Domain Values(s)		1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.		
allowed values: No Information									
Water Resource Information : Sulfate Concentration		1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.		
allowed values: -999999									
Supported by Bridge Span		1	No Information	Boolean	Unitless	0	The object is at least partially supported by, or passes across, a bridge span. [Description] For example, an aqueduct carried across a valley by one or more bridge spans.		
allowed values: False				No Information			True		
Water Resource Information : Temperature		1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.		
allowed values: -999999									

	Terrain Gap Width	1	-999999	REAL	Metre	0	The minimum horizontal bridging distance necessary to cross a channel. [Description] The width is measured perpendicular to the direction of water flow from bank to bank, at the first usable break in slope on each side of the channel above mean high water. Usable banks are those accessible by vehicles; small unusable ledges and cliffs are not considered usable breaks in slopes.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<i>allowed values:</i> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<i>allowed values:</i> No Information						
	Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
	<i>allowed values:</i> Above Surface			Below Ground Surface			No Information On Surface
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Flow	1	-999999	Real	Litres per Minute	0	The rate of water flow through or exiting from a feature.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Flow Rate Category	1	No Information	Enumeration	Unitless	0	Value used to categorize streams, canals, rivers and other flowing water given the quantity of water flow. The categories correspond to specifications for water purification units in order to allow for quick identification of areas of water flow that are most suitable for placement of water purification equipment.
	<i>allowed values:</i> Large Small			Moderate			No Information Other
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i> -999999						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i> Contaminated Potable			No Information Treatable			Nonpotable Other
New	Water Resource Information : Water Pump Accessibility	1	No Information	Enumeration	Unitless		The approachable or easily entered side of a water source where portable equipment including pumps and pipes may be placed into the water source and used with nearby portable equipment. [Description] Provides an indication of whether it is possible access the water for the purpose of connecting portable water pumping equipment to temporary purification units. Accessibility must meet distance requirements in the transport of water: 100 m horizontal and 10 m vertical.
	<i>allowed values:</i> From All Sides From Right No Information			From East From South			From Left From West From North No Accessibility
New	Water Resource Information : Water Stage	1	No Information	Enumeration	Unitless	0	The flow stage of a stream or canal.
	<i>allowed values:</i> High Other			Low			Mean No Information

Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i>	Alkaline No Information		Brackish Other			Fresh Saline Mineral
New Water Resource Information : Water Use	3	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
<i>allowed values:</i>	Agricultural Irrigation Institutional Other		Commercial Livestock Power Generation			Domestic Irrigation Municipal Recreational Industrial No Information Sanitary Domestic
Inland Waterbody Bank (2) : Waterbody Bank Height (second bank)	1	-999999	REAL	Metre	0	The height of the waterbody bank above the average water level.
<i>allowed values:</i>	-999999					
<i>allowed values:</i>	-999999					
Inland Waterbody Bank (2) : Waterbody Bank Vegetation Cover (second bank)	1	[-999999, -999999]	REAL_Interval	Percent	0	The fraction of vegetation cover on the bank of a watercourse.
<i>allowed values:</i>	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
<i>allowed values:</i>	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i>	-999999

Feature Canal (Line 00)

New ☐ Canal

An artificial waterway with no flow, or a controlled flow, usable or built for navigation.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Inland Waterbody Bank (1) : Above Water Bank Slope (first bank)	1	-999999	REAL	Percent	0	The amount of upward inclination between the horizontal surface of the mean water level of a watercourse where it touches the bank and the top of the first usable break in slope, measured at the same point on the upper bank as the military gap width. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
<i>allowed values:</i>	-999999					
<i>allowed values:</i>	-999999					
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i>	-999999					

New	Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
	<i>allowed values:</i> -999999						
	Average Water Depth	1	[-999999,-999999]	Real Interval	Metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<i>allowed values:</i> [-999999,-999999]						
	Inland Waterbody Bank (1) : Bank Orientation (first bank)	1	No Information	Enumeration	Unitless	0	The relative orientation of a bank of an inland waterbody based on the direction of predominant water flow in the adjacent waterbody.
	<i>allowed values:</i> Indeterminate Other			Left Right		No Flow	No Information
	<i>allowed values:</i> Indeterminate Other			Left Right		No Flow	No Information
	Bottom Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing the bottom of a body of water.
	<i>allowed values:</i> Bedrock Gravel and Cobble Paved Sand Slash			Clay and Silt Masonry Peat Sand and Gravel Soil		Concrete No Information Reinforced Concrete Sand over Mud	Coral Other Rocks and Boulders Silty Sands
	<i>allowed values:</i> Bedrock Gravel and Cobble Paved Sand Slash			Clay and Silt Masonry Peat Sand and Gravel Soil		Concrete No Information Reinforced Concrete Sand over Mud	Coral Other Rocks and Boulders Silty Sands
	<i>allowed values:</i> Bedrock Gravel and Cobble Paved Sand Slash			Clay and Silt Masonry Peat Sand and Gravel Soil		Concrete No Information Reinforced Concrete Sand over Mud	Coral Other Rocks and Boulders Silty Sands
New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<i>allowed values:</i> -999999						
	Contained within Tunnel	1	No Information	Boolean	Unitless	0	The object is at least partially located within, or passes through, a tunnel. [Description] For example, a canal passing through a tunnel.
	<i>allowed values:</i> False			No Information		True	
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian National Public			International No Information State		Joint Military and Civilian Other	Military Private
	Covered Drain	1	No Information	Boolean	Unitless	0	An indication that a watercourse section is completely covered over and connects to uncovered watercourses at each end.
	<i>allowed values:</i> False			No Information		True	
	Covered Drain Length	1	-999999	Real	Metre	0	The length of a watercourse section that is completely covered over and connects to uncovered watercourses at each end.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999						

Deck Level	1	-999999	REAL	Unitless	0	The relative level of a deck within a set of vertically stacked decks, one over another, in a transportation structure (for example: on a bridge or in a tunnel). [Description] The lowest deck is numbered '1' and the remaining decks are numbered in ascending order (bottom to top) with the uppermost deck being assigned the highest value.
<i>allowed values:</i> -999999						
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned	Not in Operation Temporarily Non-operational		Operational
New Feature Code	1	BH020	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BH020						
Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Geographic Name Type	3	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Other			Historical Transliterated Provisional	Native Transliterated Unverified Transliterated		No Information Variant Transliterated
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i> Accurate			Approximate	Doubtful		No Information
Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999						
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry			Intermittent	No Information		Perennial
New Least Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
<i>allowed values:</i> False			No Information	True		

New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<i>allowed values:</i> -999999						
New	Maximum Water Depth	1	-999999	Real	Metre		Maximum water depth the object was designed to hold.
	<i>allowed values:</i> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Navigability Information	1	No Information	Enumeration	Unitless	0	Information about the navigability of a body of water by ocean-going and/or large vessels. [Description] Navigability is not intended to include jet skis, motorboats or other recreational craft.
	<i>allowed values:</i> Navigable No Information			Navigable and Operational Not Navigable			Navigable but Abandoned Other Navigable with Periodic Restrictions
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False			No Information			True
	Pedestrian Traversable	1	No Information	Boolean	Unitless	0	An indication that a feature is traversable on foot.
	<i>allowed values:</i> False			No Information			True
New	Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<i>allowed values:</i> -999999						
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
	Predominant Average Water Velocity	1	[-999999,-999999]	Real_Interval	Metres per Second	0	The average water velocity, exclusive of high water due to runoff or low water due to drought.
	<i>allowed values:</i> (1.5, INFINITY)			(-INFINITY, 1.5]			[-999999, -999999] [-999999, -999999]
	Predominant Maximum Water Depth	1	[-999999,-999999]	Real_Interval	Metre	0	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<i>allowed values:</i> (1.6, 2.4]			(2.4, INFINITY)			(-INFINITY, 0.8] [-999999, -999999]
	Predominant Maximum Water Velocity	1	[-999999,-999999]	Real_Interval	Metres per Second	0	The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.
	<i>allowed values:</i> (0.5, 1.5] [-999999, -999999]			(1.5, 2.5] [-999999, -999999]			(2.5, INFINITY) (-INFINITY, 0.5]
	Predominant Minimum Water Depth	1	[-999999,-999999]	Real_Interval	Metre	0	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<i>allowed values:</i> (0.8, 1.6] [-999999, -999999]			(1.6, 2.4]			(2.4, INFINITY) (-INFINITY, 0.8]
	Predominant Minimum Water Velocity	1	[-999999,-999999]	Real_Interval	Metres per Second	0	The average minimum (seasonal low water) water velocity, exclusive of high water due to runoff or low water due to drought.
	<i>allowed values:</i> (1.5, 1.5] [-999999, -999999]			(1.5, 2.5] [-999999, -999999]			(2.5, INFINITY) (-INFINITY, 0.5]
	Predominant Water Depth	1	-999999	Real	Metre		The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<i>allowed values:</i> -999999						

Inland Waterbody Bank (1) : Predominant Waterbody Bank Height (first bank)	1	[-999999, -999999]	REAL_Interval	Metre	0	The predominant height (the height of at least 50 percent) of the bank, measured from mean water level to the first break in slope above the mean water level.	
allowed values:	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval		
allowed values:	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval		
Inland Waterbody Bank (2) : Predominant Waterbody Bank Slope (second bank)	1	[-999999, -999999]	REAL_Interval	Percent	0	The predominant slope (the slope of at least 50 percent) of the bank, measured from mean water level to the first accessible break in slope above the mean water level. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.	
allowed values:	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval		
allowed values:	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval		
Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).	
allowed values:	Depressed Raised		Level			No Information Not Applicable	
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
allowed values:	U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.	
allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)		Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non- intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.	
allowed values:	No Information						
Restriction Information : Security Attributes Group (resource owner- producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.	

<u>allowed values:</u> No Information						
Inland Waterbody Bank (1) : Shoreline Delineated (first bank)	1	No Information	Boolean	Unitless	0	An indication that the delineation of a shoreline is definite. [Description] The delineation of the shoreline along a beach is typically definite whereas along a mangrove swamp it is typically indefinite.
<u>allowed values:</u> False						
<u>allowed values:</u> False						
No Information						
True						
True						
Inland Waterbody Bank (2) : Shoreline Type (second bank)	1	No Information	Enumeration	Unitless	0	The physical characteristics of a shoreline.

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<u>allowed values:</u> No Information						
New Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<u>allowed values:</u> -999999						
Supported by Bridge Span	1	No Information	Boolean	Unitless	0	The object is at least partially supported by, or passes across, a bridge span. [Description] For example, an aqueduct carried across a valley by one or more bridge spans.
<u>allowed values:</u> False						
No Information						
True						
New Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<u>allowed values:</u> -999999						
Terrain Gap Width	1	-999999	REAL	Metre	0	The minimum horizontal bridging distance necessary to cross a channel. [Description] The width is measured perpendicular to the direction of water flow from bank to bank, at the first usable break in slope on each side of the channel above mean high water. Usable banks are those accessible by vehicles; small unusable ledges and cliffs are not considered usable breaks in slopes.
<u>allowed values:</u> -999999						
New Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<u>allowed values:</u> -999999						
New Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<u>allowed values:</u> -999999						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<u>allowed values:</u> No Information						
Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
<u>allowed values:</u> Above Surface						
Below Ground Surface						
No Information						
On Surface						
New Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
<u>allowed values:</u> -999999						
New Water Resource Information : Water Flow	1	-999999	Real	Litres per Minute	0	The rate of water flow through or exiting from a feature.

New	Water Resource Information : Water Flow Rate Category	1	No Information	Enumeration	Unitless	0	Value used to categorize streams, canals, rivers and other flowing water given the quantity of water flow. The categories correspond to specifications for water purification units in order to allow for quick identification of areas of water flow that are most suitable for placement of water purification equipment.
	<i>allowed values:</i> -999999						
	<i>allowed values:</i> Large Small			Moderate			No Information Other
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i> -999999						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i> Contaminated Potable			No Information Treatable			Nonpotable Other
New	Water Resource Information : Water Pump Accessibility	1	No Information	Enumeration	Unitless		The approachable or easily entered side of a water source where portable equipment including pumps and pipes may be placed into the water source and used with nearby portable equipment. [Description] Provides an indication of whether it is possible access the water for the purpose of connecting portable water pumping equipment to temporary purification units. Accessibility must meet distance requirements in the transport of water: 100 m horizontal and 10 m vertical.
	<i>allowed values:</i> From All Sides From Right No Information			From East From South			From Left From West From North No Accessibility
New	Water Resource Information : Water Stage	1	No Information	Enumeration	Unitless	0	The flow stage of a stream or canal.
	<i>allowed values:</i> High Other			Low			Mean No Information
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
	<i>allowed values:</i> Alkaline No Information			Brackish Other			Fresh Saline Mineral
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
	<i>allowed values:</i> Agricultural Irrigation Institutional Other			Commercial Livestock Power Generation			Domestic Irrigation Municipal Recreational Industrial No Information Sanitary Domestic
	Inland Waterbody Bank (2) : Waterbody Bank Height (second bank)	1	-999999	REAL	Metre	0	The height of the waterbody bank above the average water level.
	<i>allowed values:</i> -999999						
	<i>allowed values:</i> -999999						
	Inland Waterbody Bank (1) : Waterbody Bank Vegetation Cover (first bank)	1	[-999999, -999999]	REAL_Interval	Percent	0	The fraction of vegetation cover on the bank of a watercourse.
	<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
	<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
----------------------------	---	---------	------	-------	---	---

allowed values: -999999

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
--------	---	---------	------	-------	---	--

allowed values: -999999

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
-------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
---	---	----------------	--------	----------	----	--

allowed values: No Information

Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
allowed values: <i>U</i>							
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.	
allowed values: <i>No Information</i>							
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.	
allowed values: <i>No Information</i>							
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.	
allowed values: <i>No Information</i>							
Undergrowth Density	1	[-999999, -999999]	REAL_Interval	Percent	0	The fraction of land within a defined area that is covered by undergrowth (for example: scrub, brush, and/or bush).	
allowed values: <i>[-999999, -999999]</i>							
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
allowed values: <i>No Information</i>							
Vegetation Trafficability Impact	1	[-999999, -999999]	Real_Interval	Percent		The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).	
allowed values: <i>[-999999, -999999]</i>							

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature CaravanPark (Area 00)

New ☐ Caravan Park

A prepared site, typically including facilities, used for holiday accommodations where caravans and/or motor homes are parked. [Description] Caravans are travel trailers towed behind vehicles while motor homes are self-contained vehicles used for both travel and accommodations. Facilities may include utility connections (for example: water, power, or gas), convenience store(s), showers, laundry facilities, and swimming pools.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
allowed values: No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
allowed values: No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AI020	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: AI020						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
allowed values: Convenience Store No Information Recreation			Food Service Other Residence			Grocery Petrol Sale Restaurant Laundry Place of Worship Restroom
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. allowed values: No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
allowed values: -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.

allowed values: -999999

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values: False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
---	---	----------------	--------	----------	-----	---

allowed values: No Information

Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i>	Accurate		Approximate			Doubtful
						No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i>	-999999					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i>	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i>	No Information					
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i>	Damaged		Destroyed			Dismantled
	No Information		Ruined			Intact
	Unmaintained					Site Preparation
						Under Construction
Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).
<i>allowed values:</i>	Depressed		Level			No Information
	Raised					Not Applicable
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i>	U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<i>allowed values:</i>	Army Geographic Agency (Netherlands)		Army Geographic Centre (Spain)			Army Geographic Institute (Portugal)

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i>	No Information					

Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<u>allowed values:</u> No Information						
Route Pavement Information : Road Weather Restriction	1	No Information	Enumeration	Unitless	0	The type of weather conditions under which a road is usable.
<u>allowed values:</u> All-weather No Information			Closed in Winter Other			Fair-weather Winter Only Limited All-weather
Route Pavement Information : Route Minimum Travelled Way Width	1	-999999	REAL	Metre	0	The minimum width of the travelled way of a route. [Description] Excludes pavements and shoulders.
<u>allowed values:</u> -999999						
Route Total Usable Width	1	-999999	REAL	Metre	0	The total usable width of the travelled way of a route. [Description] Includes pavements and shoulders.
<u>allowed values:</u> -999999						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<u>allowed values:</u> No Information						
Supported by Bridge Span	1	No Information	Boolean	Unitless	0	The object is at least partially supported by, or passes across, a bridge span. [Description] For example, an aqueduct carried across a valley by one or more bridge spans.
<u>allowed values:</u> False			No Information			True
Through Route	1	No Information	Boolean	Unitless	0	An indication that a route (for example: a road) passes through (both into and out of) a place (for example: an urban area) without interruption. [Description] A through route may have devices (for example: a traffic light) to control traffic flow.
<u>allowed values:</u> False			No Information			True
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<u>allowed values:</u> Automotive Other			Bus Pipeline Maintenance			Caravan Route Portage No Information Power Line Maintenance
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<u>allowed values:</u> No Information						
Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
<u>allowed values:</u> Below Ground Surface			No Information			On Surface On Waterbody Bottom
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Castle (Area 00)

New ☐ Castle

A single large fortified building that has thick walls, battlements, and often the presence of a moat, and is commonly of some historical significance. [Description] Historically castles were designed and constructed as defensive structures situated so as to dominate the surrounding countryside. With advancing technology, especially artillery, they have become obsolete for military defensive purposes and are now valued primarily for their historical significance. In more recent times elaborate country houses were built incorporating many design elements of a castle but which were not fully capable of being used as defensive structures. Examples of castles of both types include Doue-la-Fontaine and Neuschwanstein.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National State			International No Information			Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AL375	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL375						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Administration Civil Activities Food Service Imprisonment Other Restaurant			Amusement Defence Activities Government Meeting Place Palace			Armory Education Headquarters Museum Place of Worship Banquet Hall Emergency Operations Hotel No Information Residence
Floor Count	1	-999999	REAL	Unitless	0	The number of floors in a structure (for example: a building).
<i>allowed values:</i> -999999						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The type of designated hazard protection shelter based on the kind of emergency. [Description] These shelters may be inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
<i>allowed values:</i> Bomb Shelter Storm Shelter			Fallout Shelter			No Information Other
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.

<u>allowed values:</u> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.

Feature CastleComplex (Area 00) New ☐ Castle Complex

A fortified complex of buildings and related structures that consists principally of a central keep with surrounding thick walls, battlements, and often the presence of a moat, and is commonly of some historical significance. [Description] A castle complex may be quite extensive, including multiple distinct buildings of diverse function. Historically castle complexes were designed and constructed as defensive structures situated so as to dominate the surrounding countryside. With advancing technology, especially artillery, they have become obsolete for military defensive purposes and are now valued primarily for their historical significance. Examples of castle complexes include Prague and Windsor Castles.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public International No Information State Joint Military and Civilian Other Military Private

<i>allowed values:</i> AL376						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Administration Civil Activities Food Service Imprisonment Other Restaurant Amusement Defence Activities Government Meeting Place Palace Armory Education Headquarters Museum Place of Worship Banquet Hall Emergency Operations Hotel No Information Residence						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999

allowed values:	No Information		Non-operational			Not in Operation
	<i>Partially Operational</i>		Planned			Temporarily Non-operational
<i>New</i> Feature Code	1	AC020	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values:	<i>AC020</i>					
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values:	No Information					
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
allowed values:	<i>-999999</i>					
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
allowed values:	<i>-999999</i>					
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False No Information True						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.

<u>allowed values:</u> No Information						

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Brick Metal Reinforced Concrete			Concrete No Information Steel	Iron Other	Masonry Prestressed Concrete	
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
<i>allowed values:</i> No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature CausewayStructure (Area 00)New ☐ Causeway Structure

A solid raised way across a terrain obstacle (for example: a wetland or a body of shallow water) that is intended to support a transportation route (for example: a road or a railway). [Description] The causeway structure is often constructed from local fill supplemented by other materials (for example: rocks, boulders or gravel) and consists of a solid linear structure in the configuration of an embankment. Causeway structures are built just high enough to insure that the transportation route will remain passable during periods of flooding, tides and seasonal rainfall. Culverts may occur along the length of the causeway structure and individual sections of the causeway structure may be interrupted by bridges.

Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
allowed values:	Boulders Mud Rubble		Gravel No Information Sand		Lava Other Soil	Loess Rock
Surface Slope	1	[-999999, -999999]	REAL_Interval	Percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.
allowed values:	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval	Greater-than Semi-interval Less-than Semi-interval
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
allowed values:	Aqueduct Railway		No Information Road		Other	Pedestrian
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Water Level Effect	1	No Information	Enumeration	Unitless	0	The relationship between the feature and surrounding (including covering and/or underlying) water.

allowed values:	Always Dry Other		Always Submerged			Covers and Uncovers	No Information
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature CausewayStructure (Line 00) New ☐ Causeway Structure

A solid raised way across a terrain obstacle (for example: a wetland or a body of shallow water) that is intended to support a transportation route (for example: a road or a railway). [Description] The causeway structure is often constructed from local fill supplemented by other materials (for example: rocks, boulders or gravel) and consists of a solid linear structure in the configuration of an embankment. Causeway structures are built just high enough to insure that the transportation route will remain passable during periods of flooding, tides and seasonal rainfall. Culverts may occur along the length of the causeway structure and individual sections of the causeway structure may be interrupted by bridges.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
allowed values: No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AQ063	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: AQ063						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values: No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
allowed values: -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
allowed values: -999999						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u>	-999999					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u>	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u>	No Information					
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Cave Information : Underground Access Orientation	1	No Information	Enumeration	Unitless	0	The ground slope at the point of access for an underground feature (for example: a cave, tunnel or underground extraction mine) as a category.
<i>allowed values:</i> Horizontal Vertical Down No Information Vertical Up Slopes Downward Slopes Upward						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Feature Cemetery (Area 00)New ☐ Cemetery**A site and associated structures devoted to the burial of the dead.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational						
New Feature Code	1	AL030	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL030						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Isolated	1	No Information	Boolean	Unitless	0	An indication that a feature (for example: a structure) is in the open by itself, isolated from other features of a similar type, and thus is visually distinct from surrounding features when viewed from a distance.
<i>allowed values:</i> FALSE		No Information			TRUE	
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False		No Information			True	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained		Destroyed Ruined			Dismantled Site Preparation	Intact Under Construction
Religious Information : Religious Designation	1	No Information	Enumeration	Unitless	0	A designation denoting a religion or system of belief.
<i>allowed values:</i> Buddhism Islam Orthodox Shia		Chaldean Judaism Other Shinto			Christian Nestorian Protestant Sunni	Hinduism No Information Roman Catholic
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

[Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
	<i>allowed values:</i> No Information						
	Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
	<i>allowed values:</i> Aeronautical No Information Railway		Automotive No Transportation System Road			Bus Other Truck	Maritime Pedestrian Underground Railway
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Cistern (Point 00)New ☐ Cistern**A man-made container used for the collection and/or storage of water.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<u>allowed values:</u> -999999						
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<u>allowed values:</u> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<u>allowed values:</u> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<u>allowed values:</u>			Civilian National Public	International No Information State	Joint Military and Civilian Other	Military Private
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN ⁻ . These are powerful poisons that are toxic to humans and aquatic life.
<u>allowed values:</u> -999999						
New Water Resource Information : Device Power Type	1	No Information	Enumeration	Unitless	0	The method by the device is powered, if any.
<u>allowed values:</u>			Compressed Air No Information	Electricity Other	Gravity Petroleum Product	Manual Steam
New Water Resource Information : Device Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the device and the underlying ground (terrain), liquid or waterbody bottom.

<i>allowed values:</i> Above Surface On Waterbody Bottom							Below Ground Surface Other	No Information Submerged	On Surface
Facility Operational Status	1	No Information	Enumeration	Unitless			The status of operation of a facility, as a whole.		
<i>allowed values:</i> No Information Partially Operational							Non-operational Planned	Not in Operation Temporarily Non-operational	Operational
New Feature Code	1	BI010	CONSTRAINED_ STRING	Unitless	5		Feature Code		
<i>allowed values:</i> BI010									
Geographic Name Information : Full Name	2	No Information	String	Unitless	200		A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.		
<i>allowed values:</i> No Information									
Geographic Name Type	2	No Information	Enumeration	Unitless			The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.		
<i>allowed values:</i> Conventional Other							Historical Transliterated Provisional	Native Transliterated Unverified Transliterated	No Information Variant Transliterated
Height Above Surface Level	1	-999999	REAL	Metre	0		The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.		
<i>allowed values:</i> -999999									
Highest Elevation	1	-999999	REAL	Metre	0		The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.		
<i>allowed values:</i> -999999									
Hydrologic Persistence	1	No Information	Enumeration	Unitless			The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.		
<i>allowed values:</i> Dry Perennial							Ephemeral	Intermittent	No Information
Isolated	1	No Information	Boolean	Unitless	0		An indication that a feature (for example: a structure) is in the open by itself, isolated from other features of a similar type, and thus is visually distinct from surrounding features when viewed from a distance.		
<i>allowed values:</i> FALSE							No Information	TRUE	
Length	1	-999999	REAL	Metre	0		The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.		
<i>allowed values:</i> -999999									
Located Underground	1	No Information	Boolean	Unitless	0		The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.		
<i>allowed values:</i> False							No Information	True	
New Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.		
<i>allowed values:</i> -999999									
Note : Memorandum	1	No Information	String	Unitless	2E+09		A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.		
<i>allowed values:</i> No Information									
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18		The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.		
<i>allowed values:</i> No Information									

	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
New	Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<i>allowed values:</i> <i>-999999</i>						
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<i>allowed values:</i> <i>Damaged</i> <i>No Information</i> <i>Unmaintained</i>			<i>Destroyed</i> <i>Ruined</i>			<i>Dismantled</i> <i>Site Preparation</i> <i>Intact</i> <i>Under Construction</i>
New	Water Resource Information : Pump Type	1	No Information	Enumeration	Unitless	0	The type of pump used to move liquid or semi-liquid material from one location to another.
	<i>allowed values:</i> <i>Airlift</i> <i>No Information</i> <i>Turbine</i>			<i>Centrifugal</i> <i>Other</i> <i>Vacuum</i>			<i>Gravity</i> <i>Reciprocating</i> <i>Jet</i> <i>Rotary</i>
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<i>allowed values:</i> <i>U</i>						
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
	<i>allowed values:</i> <i>No Information</i>						
	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
	<i>allowed values:</i> <i>No Information</i>						
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.

<i>allowed values:</i> No Information							
New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999							
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999							
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999							
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999							
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information							
	Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Brick Metal Reinforced Concrete				Concrete No Information Steel	Iron Other Stone	Masonry Prestressed Concrete	
	Volume	1	-999999	Real	Cubic Metre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<i>allowed values:</i> -999999							
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
<i>allowed values:</i> -999999							
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
<i>allowed values:</i> -999999							
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless		The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable				No Information Treatable	Nonpotable	Other	
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Other				Brackish Saline	Fresh	No Information	
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional Other				Commercial Livestock Power Generation	Domestic Irrigation Municipal Sanitary Domestic	Industrial No Information	

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Vegetation Trafficability Impact	1	[-999999, -999999]	Real_Interval	Percent		The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
<i>allowed values:</i> [-999999, -999999]						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature ConservationArea (Area 00)

New ☐ Conservation Area

An area of land and/or sea especially dedicated to the protection and maintenance of biological diversity, and of natural and associated cultural resources, and managed through legal or other effective means. [Description] As determined, for example, by the International Union for Conservation of Nature and Natural Resources (IUCN).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Conservation Area Management Category	1	No Information	Enumeration	Unitless	0	The category of a protected area based on level of protection and the enabling laws of the controlling entity (for example: State) or rules of international organization (for example: as determined by the International Union for Conservation of Nature and Natural Resources (IUCN)).

allowed values:	Breeding Ground Managed Resource Protected Area Other Wilderness Area			Habitat and/or Species Management Area National Park Protected Landscape or Seascape			Habitat Management Area Natural Monument Species Management Area	Managed Forest Protected Area No Information Strict Nature Reserve
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).		
allowed values:	Civilian National Public		International No Information State			Joint Military and Civilian Other		Military Private
New Feature Code	1	FA210	CONSTRAINED_ STRING	Unitless	5	Feature Code		
allowed values:	FA210							
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.		
allowed values:	No Information							
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

Feature ContaminatedRegion (Area 00)

New ☐ Contaminated Region

A region whose prevailing natural conditions have been degraded through contamination by harmful or objectionable substances. [Description] The contamination may be either naturally occurring or the result of human activity. For example, polluted by sewage or toxic chemicals, obscured by smoke or ash from volcanic eruptions, or contaminated by exposure to Chemical, Biological, Radiological, and/or Nuclear (CBRN) agents.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature ControlPoint (Point 00)

New ☐ Control Point

A terrain object (for example: a marker) with a known location (for example: horizontal position, elevation, or both) intended to serve as a survey control. [Description] Usually of a lower order of positional accuracy than a Geodetic Point but of sufficient accuracy for local surveying.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Base Elevation	1	-999999	REAL	Metre	0	The vertical distance from a specified vertical datum to the terrain surface of or at the base of the feature. [Description] If the feature is not supported above the surface by another feature then the base of the feature is usually located at ground or water level on the downhill/downstream side. For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). In the case of a survey marker (monument) this is usually the elevation assigned to the marker (monument).

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values:	No Information					
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
allowed values:	-999999					
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
allowed values:	-999999					
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values:	-999999					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values:	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values:	No Information					
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values:	False		No Information		True	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.

Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
allowed values: Conical Flat with Parapet Pitched with Clerestory With Clerestory With Steeple			Domed No Information Pyramidal With Cupola With Tower			Flat Other Sawtoothed With Minaret With Turret Flat with Clerestory Pitched Semi-cylindrical With Smokestack
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
allowed values: Aeronautical No Information			Canal Other			Inland Waterway Railway Maritime Road
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
allowed values: Aluminum Iron Other Wood			Brick Masonry Prestressed Concrete			Concrete Metal Reinforced Concrete Glass No Information Steel
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
allowed values: No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
allowed values: -999999

Feature Conveyor (Line 00)

New ☐ Conveyor

A mechanical device for conveying articles or materials during manufacture or processing using an endless moving belt or series of rollers.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights. <i>allowed values:</i> <i>False</i> <i>No Information</i> <i>True</i>
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature. <i>allowed values:</i> <i>-999999</i>
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole. <i>allowed values:</i> <i>No Information</i> <i>Non-operational</i> <i>Not in Operation</i> <i>Operational</i> <i>Partially Operational</i> <i>Planned</i> <i>Temporarily Non-operational</i>
New Feature Code	1	AF020	CONSTRAINED_STRING	Unitless	5	Feature Code <i>allowed values:</i> <i>AF020</i>
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself. <i>allowed values:</i> <i>-999999</i>
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof. <i>allowed values:</i> <i>-999999</i>
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter. <i>allowed values:</i> <i>-999999</i>
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length. <i>allowed values:</i> <i>No Information</i>
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air. <i>allowed values:</i> <i>False</i> <i>No Information</i> <i>True</i>
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole. <i>allowed values:</i> <i>Damaged</i> <i>Destroyed</i> <i>Dismantled</i> <i>Intact</i> <i>No Information</i> <i>Ruined</i> <i>Site Preparation</i> <i>Under Construction</i> <i>Unmaintained</i>
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. <i>allowed values:</i> <i>U</i>
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature CoolingFacility (Area 00) New ☐ Cooling Facility

A facility for the removal of thermal energy (for example: by generating and circulating chilled water) for cooling purposes.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AD055	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AD055						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Commerce Other			Government Residence			Manufacturing No Information
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.

<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> <i>False</i> <i>No Information</i> <i>True</i>						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> <i>Damaged</i> <i>Destroyed</i> <i>Dismantled</i> <i>Intact</i> <i>No Information</i> <i>Ruined</i> <i>Site Preparation</i> <i>Under Construction</i> <i>Unmaintained</i>						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> <i>U</i>						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.

allowed values: No Information

Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
---	---	----------------	--------	----------	-----	--

allowed values: No Information

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
----------------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
-------	---	---------	------	-------	---	--

Feature CoolingTower (Area 00)New ☐ Cooling Tower**A tall tower for cooling hot water from an industrial process before reuse.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<u>allowed values:</u> <i>False</i>			<u>No Information</u>			<i>True</i>
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<u>allowed values:</u> <i>No Information</i> <i>Partially Operational</i>			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AF030	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> <i>AF030</i>						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.

allowed values: No Information

Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information		True	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature Courtyard (Area 00)

New ☐ Courtyard

An open area that is open to the sky and surrounded by walls or buildings forming the precincts of a larger facility (for example: an extended house, a castle, or a homestead), often in the form of an area that is enclosed by a single building. [Description] Historically, these areas in inns and public buildings were often the primary meeting places for some purposes, leading to the other meanings of the term 'court'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						

Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Crib (Area 00)New ☐ Crib

A permanent structure set in the water, typically framed with wooden beams and filled with rocks or boulders that is used to anchor log booms or support other constructions (for example: submerged outfalls, diffusers, or piers). [Description] They may always be dry, submerged, or covered and uncovered. Cribs should not be confused with water intake towers which may sometimes also be termed a 'crib'.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Hydrographic Base Height : Sounding Metadata : Bathymetric Measurement Technique	3	No Information	Enumeration	Unitless		The technique used to determine water depth(s).

Feature CropLand (Area 00)

New ☐ Crop Land

An area that has been tilled for the planting of crops.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Crop Information : Crop Species	3	No Information	Enumeration	Unitless	0	The predominant species of a crop land.
<i>allowed values:</i> Barley Cork-Oak Maize Oil Crop Peanut Sisal Tuber			Cannabis Cotton Millet Opium Poppy Potato Sorghum Vegetable Crop			Carob Dry Crop No Information Ornamental Crop Pulse Sugar Crop Wheat Coffee Fibre Crop Oat Other Rye Tobacco
Crop Information : Farming Method	3	No Information	Enumeration	Unitless	0	The agricultural practice(s) in use within an agro-ecosystem.
<i>allowed values:</i> Fallow Permanent			Grazing Permanent Irrigation			No Information Slash and Burn Other
Crop Information : Farming Pattern	3	No Information	Enumeration	Unitless	0	The general arrangement(s) and/or pattern(s) of farming fields.
<i>allowed values:</i> Intermingled Trees No Information Treeless			Intermingled Woods Other Trellised			Irregular Regular Linear Terraced
New Feature Code	1	EA010	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> EA010						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Crop Information : Irrigation Method	1	No Information	Enumeration	Unitless	0	The method used to supply crops with water.
<i>allowed values:</i> Center Pivot Other			Furrow Overhead			Linear Move No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True

Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
allowed values: U							
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

	U.S. Pacific Command (PACOM)		U.S. Southern Command (USSOUTHCOM)			U.S. Special Operations Command (USSOCOM)	U.S. Strategic Command (USSTRATCOM)
	U.S. Transportation Command (USTRANSCOM)						
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.	
allowed values: No Information							
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.	
allowed values: No Information							
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.	
allowed values: No Information							
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
allowed values: No Information							
Vegetation Trafficability Impact	1	[-999999, -999999]	Real_Interval	Percent		The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).	
allowed values: [-999999, -999999]							
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.	
allowed values: -999999

Feature Crossing (Point 00) New ☐ Crossing

A location where land transportation routes intersect or cross at the same vertical level. [Description] For example, a railway crossing, a road intersection, and a ford.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Feature Code	1	AQ062	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AQ062						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Intersection Control Type	3	No Information	Enumeration	Unitless	0	The type of route intersection traffic control based on the method(s) of warning and/or control.
<i>allowed values:</i> Ground Marking Priority Sign			No Control Signal Device			No Information Stop Sign Other Yield Sign
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
allowed values:	Concrete Other		Masonry			Metal No Information
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
allowed values:	-999999

Feature Culvert (Point 00)New ☐ Culvert

An enclosed channel for carrying a watercourse (for example: a stream, a sewer, or a drain) under a route (for example: a road, a railway, or an embankment). [Description]
Usually the construction of the route is unaffected.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Cross-sectional Profile	1	No Information	Enumeration	Unitless	0	The cross-sectional profile of an opening (for example: a tunnel or the space under a bridge span).
<i>allowed values:</i> Arch Semicircular			Box			No Information Other
Culvert Type	1	No Information	Enumeration	Unitless	0	The type of a culvert based on its shape and fill.
<i>allowed values:</i> Box with Load Regular with Soil			Box with Soil			No Information Other
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AQ065	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AQ065						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature Cut (Line 00)New ☐ Cut

An excavation in the terrain to provide passage for a land or water transportation route (for example: a road, a railway, and/or a canal).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values:</i> -999999						
New Feature Code	1	DB070	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> DB070						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Grading Type	1	No Information	Enumeration	Unitless	0	The number of terrain feature sides on which either fill or cut material is exposed. [Description] For example, along two sides of a road that is both cut into the side of a hill and supported by fill on the downslope.
<i>allowed values:</i> Many Sides Other			No Information Two Sides			No Sides One Side
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
New Physical Condition	1	No Information	Enumeration	Unitless	0	The physical state of a structure, or site, as a whole.

<i>allowed values:</i>	<i>Damaged</i> No Information <i>Under Construction</i>	<i>Destroyed</i> Other <i>Unmaintained</i>	<i>Dismantled</i> <i>Ruined</i>	<i>Intact</i> <i>Site Preparation</i>		
Predominant Feature Depth	1	-999999	REAL	Metre	0	The predominant depth (the depth of at least 50 percent) of the feature.
<i>allowed values:</i>	-999999					
Predominant Feature Height	1	-999999	REAL	Metre	0	The predominant height (the height of at least 50 percent) of the feature measured from the lowest point of the base at ground or water level (downhill side/downstream side).
<i>allowed values:</i>	-999999					
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i>	U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

<i>allowed values:</i>	No Information					
Surface Slope	1	[-999999, -999999]	REAL_Interval	Percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information

Feature Dam (Area 00) New ☐ Dam

A barrier constructed to hold back water and raise its level to form a reservoir or to prevent flooding.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
Dam Crest Width	1	-999999	Real	Metre	0	The average distance across the crest of a dam. [Description] The width is measured perpendicular to the crest centerline.
<i>allowed values:</i> -999999						
Dam Face Type	1	No Information	Enumeration	Unitless		The type of slope of the upstream face of a dam.
<i>allowed values:</i> No Information			Other			Slope Vertical
New Dam Structural Design Type	1	No Information	Enumeration	Unitless	0	The type of structural design of a dam.
<i>allowed values:</i> Arch Gravity Rockfill			Asphalt-concrete core Multi-Arch			Buttress No Information Earthen Other
Dam Type	1	No Information	Enumeration	Unitless	0	The type of a dam based on function and/or structure. [Description] May be used as a means of subtyping Feature: 'Dam'.
<i>allowed values:</i> Flood Control Other			Hydroelectric Power Generation Weir			Navigation No Information
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BI020	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BI020						
Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Geographic Name Type	3	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.

<i>allowed values:</i> Conventional Other		Historical Transliterated Provisional		Native Transliterated Unverified Transliterated		No Information Variant Transliterated
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information		True	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction
New Power Source	3	No Information	Enumeration	Unitless	0	The energy source(s) employed to generate power for off-site distribution.
<i>allowed values:</i> Hydro-electric			No Information		Other	Tidal
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

	U.S. Transportation Command (USTRANSCOM)								
Restriction Information : Security Attributes Group (resource non-intelligence community markings)		1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.		
allowed values: No Information									
Restriction Information : Security Attributes Group (resource owner-producer)		1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.		
allowed values: No Information									
Specified Domain Values(s)		1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.		
allowed values: No Information									
Spillway Height		1	-999999	Real	Metre	0	The vertical distance above ground or water level on the upstream side of the dam.		
allowed values: -999999									
Structural Material Type		3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.		
allowed values:	Brick			Composition			Concrete		Masonry
	Metal			No Information			Other		Rubble
	Soil			Steel			Stone		Treated Timber
	Wood								
Transportation System Type		3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.		
allowed values:	No Information			No Transportation System			Other		Pedestrian
	Railway			Road					
Unique Entity Identifier		1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.		
allowed values: No Information									
Vertical Obstruction Identifier		1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.		
allowed values: No Information									
Water Resource Information : Water Pump Accessibility		1	No Information	Enumeration	Unitless	0	The approachable or easily entered side of a water source where portable equipment including pumps and pipes may be placed into the water source and used with nearby portable equipment. [Description] Provides an indication of whether it is possible access the water for the purpose of connecting portable water pumping equipment to temporary purification units. Accessibility must meet distance requirements in the transport of water: 100 m horizontal and 10 m vertical.

Feature Dam (Point 00) New ☐ Dam

A barrier constructed to hold back water and raise its level to form a reservoir or to prevent flooding.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<u>allowed values:</u> False			No Information		True	
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<u>allowed values:</u> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<u>allowed values:</u> <div>Civilian National Public</div>			<div>International No Information State</div>	<div>Joint Military and Civilian Other</div>	<div>Military Private</div>	
Dam Crest Width	1	-999999	Real	Metre	0	The average distance across the crest of a dam. [Description] The width is measured perpendicular to the crest centerline.
<u>allowed values:</u> -999999						
Dam Face Type	1	No Information	Enumeration	Unitless	0	The type of slope of the upstream face of a dam.
<u>allowed values:</u> No Information			Other	Slope	Vertical	
New Dam Structural Design Type	1	No Information	Enumeration	Unitless	0	The type of structural design of a dam.

<i>allowed values:</i>	Arch Gravity Rockfill		Asphalt-concrete core Multi-Arch		Buttress No Information	Earthen Other
Dam Type	1	No Information	Enumeration	Unitless	0	The type of a dam based on function and/or structure. [Description] May be used as a means of subtyping Feature: 'Dam'.
<i>allowed values:</i>	Flood Control Other		Hydroelectric Power Generation Weir		Navigation	No Information
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i>	No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational	Operational
New Feature Code	1	BI020	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i>	BI020					
Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i>	No Information					
Geographic Name Type	3	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i>	Conventional Other		Historical Transliterated Provisional		Native Transliterated Unverified Transliterated	No Information Variant Transliterated
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i>	-999999					
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i>	-999999					
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i>	-999999					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i>	No Information					
Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i>	No Information					
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i>	False		No Information		True	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i>	Damaged No Information Unmaintained		Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction
New Power Source	3	No Information	Enumeration	Unitless	0	The energy source(s) employed to generate power for off-site distribution.

allowed values: <i>Hydro-electric</i>			No Information			Other	<i>Tidal</i>
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
allowed values: <i>U</i>							
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.	
allowed values:							
Army Geographic Agency (Netherlands)			Army Geographic Centre (Spain)			Army Geographic Institute (Portugal)	Bundeswehr Geoinformation Office (Germany)

U.S. Transportation Command (USTRANSCOM)							
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.	
allowed values: <i>No Information</i>							
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.	
allowed values: <i>No Information</i>							
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.	
allowed values: <i>No Information</i>							
Spillway Height	1	-999999	Real	Metre	0	The vertical distance above ground or water level on the upstream side of the dam.	
allowed values: <i>-999999</i>							
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.	
allowed values:							
Brick			<i>Composition</i>			Concrete	Masonry
Metal			No Information			Other	Rubble
Soil			Steel			Stone	Treated Timber
Wood							
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.	
allowed values: <i>No Information</i>							
Railway			No Transportation System Road			Other	Pedestrian

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
---------------------------------	---	----------------	--------	----------	----	---

allowed values: No Information

New Water Resource Information : Water Pump Accessibility	1	No Information	Enumeration	Unitless	0	The approachable or easily entered side of a water source where portable equipment including pumps and pipes may be placed into the water source and used with nearby portable equipment. [Description] Provides an indication of whether it is possible access the water for the purpose of connecting portable water pumping equipment to temporary purification units. Accessibility must meet distance requirements in the transport of water: 100 m horizontal and 10 m vertical.
---	---	----------------	-------------	----------	---	--

allowed values: From All Sides From Right No Information From East From South From Left From West From North No Accessibility

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
-------	---	---------	------	-------	---	--

allowed values: -999999

Width at Top	1	-999999	REAL	Metre	0	The width at the top of a feature.
--------------	---	---------	------	-------	---	------------------------------------

allowed values: -999999

Feature Dataset (Area 00)

New ☐ Dataset

A resource that is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process).
[Description] For example, a set of modeling entities whose instances together constitute a 'water resources map'.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Absolute Horizontal Accuracy (90%)	1	-999999	REAL	Metre	0	The difference between the recorded horizontal coordinates of a feature and its true position referenced to the same geodetic datum expressed as a circular error at 90 percent probability. [Description] It may also be applied to a data set. If the data contains multiple accuracies, usually the worst accuracy which applies to 10% or more of the data is recorded.

allowed values: -999999

Absolute Vertical Accuracy (90%)	1	-999999	REAL	Metre	0	The difference between the recorded elevation of a feature and its true elevation referenced to the same vertical datum expressed as a linear error at 90 percent probability. [Description] It may also be applied to a data set. If the data contains multiple accuracies, usually the worst accuracy which applies to 10% or more of the data is recorded.
----------------------------------	---	---------	------	-------	---	---

allowed values: -999999

Cell Identifier	1	No Information	String	Unitless	20	The identifier that denotes a defined extent (for example: a rectangular cell) within a system (for example: an array of rectangular cells) of planar space partitioning. [Description] The partitioning results in a set of unique, continuous, non-overlapping, regions; for example: a grid, a hexagonal tiling, a Voronoi tessellation, a Delaunay triangulation, a Triangulated Irregular Network (TIN). The specific mechanism used to create the tessellation and assign identifiers to its cells is externally defined.
-----------------	---	----------------	--------	----------	----	---

<u>allowed values:</u> No Information						
Cell Partition Scheme	1	No Information	Enumeration	Unitless	0	The tessellation scheme used to create a planar space partitioning and assign identifiers to its cells. [Description] The partitioning results in a set of unique, continuous, non-overlapping, regions; for example: a grid, a hexagonal tiling, a Voronoi tessellation, a Delaunay triangulation, a Triangulated Irregular Network (TIN).
<u>allowed values:</u> Fixed Cells, 0.25 Arc Degree No Information						
Fixed Cells, 0.5 Arc Degree						
Fixed Cells, 1 Arc Degree						
Fixed Cells, 5 Arc Degree						
Variable Cells						
Data Quality Statement	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records a general assessment of the quality of a resource (for example: a data instance, a data set or a data processing activity). [Description] The quality of a data resource is dependent on the data providers knowledge regarding the lineage of the data and the processes that have been used to transform that data. No restriction is placed on the length of the statement.
<u>allowed values:</u> No Information						
Elevation Vertical Accuracy (90%)	1	-999999	REAL	Metre	0	The difference between a recorded elevation value and the true elevation referenced to the same vertical datum, expressed as a linear error at 90 percent probability. [Description] The elevation value may, for example, represent the highest point on a feature or the base of the feature at ground level. The accuracy may also be representative of a set of elevation values. If the data contains multiple accuracies, usually the worst accuracy which applies to 10% or more of the data is recorded.
<u>allowed values:</u> -999999						
Equivalent Scale Category	1	No Information	Enumeration	Unitless	0	The map scale that best represents the density of feature collection within the geospatial extent of a specified region, as a category.
<u>allowed values:</u> 1:1,000,000						
1:25,000						
1:50,000						
1:100,000						
1:250,000						
1:500,000						
No Information						
Other						
Extraction Specification	1	No Information	Enumeration	Unitless	0	The specification that was used as the basis for defining the digital representation of the feature or data set.
<u>allowed values:</u> DFEG						
No Information						
GTDS-EG						
Other						
LTDS-EG						
RTDS-EG						
MGCP TRD						
S-UTDS-EG						
Extraction Specification Version	1	No Information	String	Unitless	24	The version of the specification that was used as the basis for defining the digital representation of the feature or data set.
<u>allowed values:</u> No Information						
New Feature Code	1	ZI031	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> ZI031						
Geodetic Datum	1	No Information	Enumeration	Unitless	0	A datum describing the relationship of a two-dimensional coordinate system to the Earth. [Description] The datum (sometimes termed 'horizontal datum') defines a surface and two locally-orthogonal axes on that surface as the basis for specifying geodetic longitude and geodetic latitude.

Height Vertical Accuracy (90%)	1	-999999	REAL	Metre	0	The difference between a recorded height value and the true height referenced to the same ground level, expressed as a linear error at 90 percent probability. [Description] The height value may, for example, represent the highest point on a feature. The accuracy may also be representative of a set of height values. If the data contains multiple accuracies, usually the worst accuracy which applies to 10% or more of the data is recorded.
--------------------------------	---	---------	------	-------	---	---

allowed values: -999999

ISO 3166-1 Alpha-3 Code	1	No Information	String	Unitless	14	The International Organization for Standardization (ISO 3166-1) three character code that designates a geopolitical entity (for example: a State). [Description] Also known as the 'alpha-3 code'. ISO changes to 'alpha-3 codes' are triggered by changes in the names of entities.
-------------------------	---	----------------	--------	----------	----	--

allowed values: No Information

Maintenance Date and Time	1	No Information	String	Unitless	20	The date and, optionally, time that maintenance, based on a given Extraction Specification, was completed for the features falling within the geospatial extent of a specified region. [Description] Midnight is understood to be 00:00:00 (the beginning of a day); when the time is not specified then midnight in the local time zone is typically implied.
---------------------------	---	----------------	--------	----------	----	--

allowed values: No Information

Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Restriction Information : Security Attributes Group (resource classification)		1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U							
Process Step Information : Resource Content Originator		1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values:							
Army Geographic Agency (Netherlands)				Army Geographic Centre (Spain)		Army Geographic Institute (Portugal)

Feature Depression (Area 00)

New ☐ Depression**A sunken place in the terrain that is completely surrounded by higher terrain.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values:</i> -999999						
New Feature Code	1	DB080	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> DB080						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Predominant Feature Depth	1	-999999	REAL	Metre	0	The predominant depth (the depth of at least 50 percent) of the feature.
<i>allowed values:</i> -999999						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

<hr/>						
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<hr/>						
allowed values:	No Information					
Surface Slope	1	[-999999, -999999]	REAL_Interval	Percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.
<hr/>						
allowed values:	[-999999, -999999]		Closed Interval		Greater-than or Equal Semi-interval	
	Greater-than to Less-than-or-equal Interval		Greater-than-or-equal to Less-than Interval		Less-than or Equal Semi-interval	
	Open Interval				Greater-than Semi-interval	
<hr/>						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<hr/>						
allowed values:	No Information					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature DepthContour (Line 00)

New ☐ Depth Contour

A line connecting points of equal depth at and below the hydrographic datum. [Description] Depth contours follow the rules for contour formation, that is, contours must close on themselves, must be continuous, and must precisely represent the shape of the bottom. Depth contours are usually based on detailed bathymetric information.

Feature DepthCurve (Area 00)New ☐ Depth Curve

A navigational safety line indicating that no sounding of a lesser depth exists seaward of the line, but greater depths may occur on the shallow side of the line. [Description]
 Depth curves should not be confused with a depth contour. Depth curves are generalised, are biased towards safety of navigation, and do not fully follow the rules for contour formation, that is, contours must close on themselves, must be continuous, and must precisely represent the shape of the bottom.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Hydrographic Vertical Positioning Information : Sounding Metadata : Bathymetric Measurement Quality Category	3	No Information	Enumeration	Unitless	0	A general evaluation of the qualities of a bathymetric measurement, as a category. Feature Desert (Area 00)

New ☐ Desert

An arid and treeless uncultivated sparsely populated tract of land.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: <i>-999999</i>						
New Feature Code	1	EE030	CONSTRAINED_ STRING	Unitless	5	Feature Code

allowed values: EE030

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
---	---	----------------	--------	----------	-----	---

allowed values: No Information

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
--------	---	---------	------	-------	---	--

allowed values: -999999

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
-------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
---	---	----------------	--------	----------	----	--

allowed values: No Information

Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
---	---	---	--------	----------	---	--

allowed values: U

Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature DishAerial (Point 00)

New ☐ Dish Aerial

A concave-shaped aerial that is used for emitting and/or sensing electromagnetic energy. [Description] For example, used to transmit and/or receive electronic signals as at a satellite station or to capture electromagnetic energy as in radio astronomy.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AT010	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AT010						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<i>allowed values:</i>	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Fibreglass			Metal			No Information Other
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature DisposalSite (Area 00)

New ☐ Disposal Site

A site for the collection and/or deposition of refuse or discarded material.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
By-product	3	No Information	Enumeration	Unitless	0	The principal by-product(s) of a production, mining, or agricultural activity. [Description] If multiple by-products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> No Information Sludge			Other Spoil			Refuse Slag
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AB000	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AB000						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). <i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Maritime Navigation Marked	1	No Information	Boolean	Unitless	0	An indication that a feature is significant to maritime safety of navigation and is marked (for example: by a light or beacon) by a maritime-specific navigational aid. [Description] Mariners may also use other prominent features (for example: rotating aeronautical beacons or lighted structures) for informal navigational purposes.
<i>allowed values:</i> FALSE			No Information			TRUE
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
allowed values:	Inland Waterway Railway	No Information	Road	Other	Pedestrian	
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Feature Ditch (Area 00)New ☐ Ditch**An artificial waterway with no flow, or a controlled flow, usually unlined, used for draining or irrigating land.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
-----------	-------------	---------	-----------	-------	--------	----------------------

	Inland Waterbody Bank (2) : Above Water Bank Slope (second bank)	1	-999999	REAL	Percent	0	The amount of upward inclination between the horizontal surface of the mean water level of a watercourse where it touches the bank and the top of the first usable break in slope, measured at the same point on the upper bank as the military gap width. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
	<i>allowed values:</i> -999999						
	<i>allowed values:</i> -999999						
	Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
	<i>allowed values:</i> -999999						
	Inland Waterbody Bank (1) : Bank Orientation (first bank)	1	No Information	Enumeration	Unitless	0	The relative orientation of a bank of an inland waterbody based on the direction of predominant water flow in the adjacent waterbody.
	<i>allowed values:</i> Indeterminate			Left		No Flow	No Information
	Other			Right			
	<i>allowed values:</i> Indeterminate			Left		No Flow	No Information
	Other			Right			
New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<i>allowed values:</i> -999999						
	Covered Drain	1	No Information	Boolean	Unitless	0	An indication that a watercourse section is completely covered over and connects to uncovered watercourses at each end.
	<i>allowed values:</i> False			No Information		True	
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999						
New	Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
	<i>allowed values:</i> -999999						
	Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
	<i>allowed values:</i> No Information			Non-operational		Not in Operation	Operational
	Partially Operational			Planned		Temporarily Non-operational	
New	Feature Code	1	BH030	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BH030						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
	Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional			Historical Transliterated		Native Transliterated	No Information
	Other			Provisional		Unverified Transliterated	Variant Transliterated
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999						

Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i> Accurate			Approximate			Doubtful No Information
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry			Intermittent			No Information Perennial
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
New Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Predominant Average Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i> [-999999, -999999]						
Predominant Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999, -999999]						
Inland Waterbody Bank (1) : Predominant Waterbody Bank Height (first bank)	1	[-999999, -999999]	REAL_Interval	Metre	0	The predominant height (the height of at least 50 percent) of the bank, measured from mean water level to the first break in slope above the mean water level.
<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval

Inland Waterbody Bank (1) : Predominant Waterbody Bank Slope (first bank)	1	[-999999, -999999]	REAL_Interval	Percent	0	The predominant slope (the slope of at least 50 percent) of the bank, measured from mean water level to the first accessible break in slope above the mean water level. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
allowed values: [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval
allowed values: [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values: Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)			Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)			Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)
Restriction Information : Security Attributes Group (resource non- intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner- producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Inland Waterbody Bank (1) : Shoreline Delineated (first bank)	1	No Information	Boolean	Unitless	0	An indication that the delineation of a shoreline is definite. [Description] The delineation of the shoreline along a beach is typically definite whereas along a mangrove swamp it is typically indefinite.
allowed values: False allowed values: False			No Information No Information			True True
Inland Waterbody Bank (2) : Shoreline Type (second bank)	1	No Information	Enumeration	Unitless	0	The physical characteristics of a shoreline.
allowed values: Building Rubble Marshy Sandy			Erosion Rubble Mud Shingly			Ice No Information Stony Mangrove Other

<i>allowed values:</i> Building Rubble Marshy Sandy		Erosion Rubble Mud Shingly		Ice No Information Stony		Mangrove Other	
Specified Domain Values(s)		1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information							
New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999							
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999							
Terrain Gap Width		1	-999999	REAL	Metre	0	The minimum horizontal bridging distance necessary to cross a channel. [Description] The width is measured perpendicular to the direction of water flow from bank to bank, at the first usable break in slope on each side of the channel above mean high water. Usable banks are those accessible by vehicles; small unusable ledges and cliffs are not considered usable breaks in slopes.
<i>allowed values:</i> -999999							
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999							
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999							
Unique Entity Identifier		1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information							
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
<i>allowed values:</i> -999999							
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
<i>allowed values:</i> -999999							
Water Resource Information : Water Potability		1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable				No Information Treatable	Nonpotable		Other
Water Resource Information : Water Type		1	No Information	Enumeration	Unitless	The type of available water based on its composition.	
<i>allowed values:</i> Alkaline Mineral Saline				Brackish No Information Seawater	Brine Not Applicable		Fresh Other
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.	

allowed values:	<i>Agricultural Irrigation</i> <i>Institutional</i> <i>Other</i>		<i>Commercial</i> <i>Livestock</i> <i>Power Generation</i>		<i>Domestic Irrigation</i> <i>Municipal</i> <i>Recreational</i>	<i>Industrial</i> <i>No Information</i> <i>Sanitary Domestic</i>
Inland Waterbody Bank (2) : Waterbody Bank Height (second bank)	1	-999999	REAL	Metre	0	The height of the waterbody bank above the average water level.
allowed values:	-999999					
allowed values:	-999999					
Inland Waterbody Bank (2) : Waterbody Bank Vegetation Cover (second bank)	1	[-999999, -999999]	REAL_Interval	Percent	0	The fraction of vegetation cover on the bank of a watercourse.
allowed values:	[-999999, -999999] <i>Greater-than to Less-than-or-equal Interval</i> <i>Open Interval</i>		<i>Closed Interval</i> <i>Greater-than-or-equal to Less-than Interval</i>		<i>Greater-than or Equal Semi-interval</i> <i>Less-than or Equal Semi-interval</i>	<i>Greater-than Semi-interval</i> <i>Less-than Semi-interval</i>
allowed values:	[-999999, -999999] <i>Greater-than to Less-than-or-equal Interval</i> <i>Open Interval</i>		<i>Closed Interval</i> <i>Greater-than-or-equal to Less-than Interval</i>		<i>Greater-than or Equal Semi-interval</i> <i>Less-than or Equal Semi-interval</i>	<i>Greater-than Semi-interval</i> <i>Less-than Semi-interval</i>
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<i>allowed values:</i> -999999						
	Covered Drain	1	No Information	Boolean	Unitless	0	An indication that a watercourse section is completely covered over and connects to uncovered watercourses at each end.
	<i>allowed values:</i> False			No Information		True	
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999						
New	Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
	<i>allowed values:</i> -999999						
	Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
	<i>allowed values:</i> No Information			Non-operational		Not in Operation	Operational
	Partially Operational			Planned		Temporarily Non-operational	
New	Feature Code	1	BH030	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BH030						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
	Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional			Historical Transliterated		Native Transliterated	No Information
	Other			Provisional		Unverified Transliterated	Variant Transliterated
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999						
	Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
	<i>allowed values:</i> Accurate			Approximate		Doubtful	No Information
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<i>allowed values:</i> Dry			Intermittent		No Information	Perennial
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999						

New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<i>allowed values:</i> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information
