Feature Shoreline (Line 00)New ☐ Shoreline

A line drawn along the normal limit of wave action above the higher high water line as defined by the National Authority. [Description] Consideration should be given to using the (more specific) high water line based on the nature of the source data collection.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition

Feature ShorelineConstruction (Area 00)

New ☐ Shoreline Construction

An artificial structure attached to land bordering a body of water and fixed in position. [Description] It is usually fixed to the waterbody bottom (for example: a mole) but may occasionally be fixed in position (for example: attached to the shore at one end and held between pilings at the other), but floating. Shoreline constructions are normally used for berthing and/or protection.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
Embankment Type	1	No Information	Enumeration	Unitless	0	The type of an embankment based on its use and/or relationship to the surrounding terrain.
<i>allowed values:</i> Fill			Levee			No Information Other
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BB081	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BB081						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Commerce Recreation			Manufacturing Residence			No Information Transportation Support Other Warehousing and Storage
Floating	1	No Information	Boolean	Unitless	0	An indication that an object is floating.
<i>allowed values:</i> False			No Information			True
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.

<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> <i>False</i> <i>No Information</i> <i>True</i>						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> <i>Damaged</i> <i>Destroyed</i> <i>Dismantled</i> <i>Intact</i> <i>No Information</i> <i>Ruined</i> <i>Site Preparation</i> <i>Under Construction</i> <i>Unmaintained</i>						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> <i>U</i>						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature ShorelineRamp (Area 00)

New ☐ Shoreline Ramp

A ramp-like structure on a shoreline that is intended to facilitate the movement of vessels and/or materials (for example: logs) into or out of the water.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational						
New Feature Code	1	BB082	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BB082						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i>	-999999					
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i>	-999999					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i>	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i>	No Information					
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i>	Damaged No Information Unmaintained					
	Destroyed Ruined					
	Dismantled Site Preparation					
	Intact Under Construction					
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i>	U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i>	No Information					

Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Shoreline Ramp Type	1	No Information	Enumeration	Unitless	0	The type of a shoreline ramp based on its design and intended use. [Description] May be used as a means of subtyping Feature: 'Shoreline Ramp'.
<i>allowed values:</i> Log Ramp Slipway			Marine Ramp			No Information Other
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Asphalt Gravel Sand			Brick Masonry Soil			Composition No Information Concrete Other
Surface Slope	1	[-999999, -999999]	REAL_Interval	Percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.
<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Water Level Effect	1	No Information	Enumeration	Unitless	0	The relationship between the feature and surrounding (including covering and/or underlying) water.
<i>allowed values:</i> Always Dry Covers and Uncovers			Always Submerged No Information			Awash at Chart Datum Other Awash at Low Water Partly Submerged
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

<i>allowed values:</i> No Information																										
Supported by Bridge Span	1	No Information	Boolean	Unitless	0	The object is at least partially supported by, or passes across, a bridge span. [Description] For example, an aqueduct carried across a valley by one or more bridge spans.																				
<i>allowed values:</i> False <table><tr><td>No Information</td><td>True</td></tr></table>							No Information	True																		
No Information	True																									
Surface Slope	1	[-999999, -999999]	REAL_Interval	Percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.																				
<i>allowed values:</i> [-999999, -999999] <table><tr><td>Greater-than to Less-than-or-equal Interval</td><td>Closed Interval</td><td>Greater-than or Equal Semi-interval</td><td>Greater-than Semi-interval</td></tr><tr><td>Open Interval</td><td>Greater-than-or-equal to Less-than Interval</td><td>Less-than or Equal Semi-interval</td><td>Less-than Semi-interval</td></tr></table>							Greater-than to Less-than-or-equal Interval	Closed Interval	Greater-than or Equal Semi-interval	Greater-than Semi-interval	Open Interval	Greater-than-or-equal to Less-than Interval	Less-than or Equal Semi-interval	Less-than Semi-interval												
Greater-than to Less-than-or-equal Interval	Closed Interval	Greater-than or Equal Semi-interval	Greater-than Semi-interval																							
Open Interval	Greater-than-or-equal to Less-than Interval	Less-than or Equal Semi-interval	Less-than Semi-interval																							
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.																				
<i>allowed values:</i> No Information																										
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature SkiJump (Line 00)New ☐ Ski-jump**A man-made structure consisting of a steep ramp levelling off at the end and built on a natural slope, used in ski-jumping.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
-----------	-------------	---------	-----------	-------	--------	----------------------

	Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
	<i>allowed values:</i> <i>False</i>			<i>No Information</i>			<i>True</i>
	Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
	<i>allowed values:</i> <i>-999999</i>						
	Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
	<i>allowed values:</i> <i>No Information</i> <i>Partially Operational</i>			<i>Non-operational</i> <i>Planned</i>			<i>Not in Operation</i> <i>Temporarily Non-operational</i> <i>Operational</i>
New	Feature Code	1	AK150	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> <i>AK150</i>						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> <i>No Information</i>						
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> <i>-999999</i>						
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> <i>-999999</i>						
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> <i>-999999</i>						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> <i>No Information</i>						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> <i>No Information</i>						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> <i>False</i>			<i>No Information</i>			<i>True</i>
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<i>allowed values:</i> <i>Damaged</i> <i>No Information</i> <i>Unmaintained</i>			<i>Destroyed</i> <i>Ruined</i>			<i>Dismantled</i> <i>Site Preparation</i> <i>Intact</i> <i>Under Construction</i>

Feature SkiRun (Area 00)

New ☐ Ski-run

A slope or trail prepared for skiing.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AK155	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AK155						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Surface Slope	1	[-999999, -999999]	REAL_Interval	Percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.
<hr/>						
allowed values:	[-999999, -999999]

Feature SluiceGate (Line 00)

New ☐ Sluice Gate

A gate used to regulate the flow or level of water in a watercourse (for example: stream, irrigation ditch, or sluice). [Description] Sluice gates are normally installed in a superstructure and/or frame and most commonly slide vertically to open but on occasion may instead slide horizontally. When opened they allow water to flow under or beside the gate. Commonly sluice gates will be installed perpendicular to the orientation of the flow of water within a watercourse and will be constructed as wide as the watercourse they regulate. Sluice gates may also be installed along the margins of watercourses for the purpose of controlling or permitting the flow of water to or from that watercourse into adjacent watercourses. Sluice gates may be used to regulate both tidal or non-tidal waters.

Thickness	1	-999999	REAL	Metre	0	The distance between the two opposite surfaces of an object, usually the distance of smallest measure. [Description] The third dimension of an object, distinct from length and width (breadth).
allowed values:	-999999					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Feature SluiceGate (Point 00)

New ☐ Sluice Gate

A gate used to regulate the flow or level of water in a watercourse (for example: stream, irrigation ditch, or sluice). [Description] Sluice gates are normally installed in a superstructure and/or frame and most commonly slide vertically to open but on occasion may instead slide horizontally. When opened they allow water to flow under or beside the gate. Commonly sluice gates will be installed perpendicular to the orientation of the flow of water within a watercourse and will be constructed as wide as the watercourse they regulate. Sluice gates may also be installed along the margins of watercourses for the purpose of controlling or permitting the flow of water to or from that watercourse into adjacent watercourses. Sluice gates may be used to regulate both tidal or non-tidal waters.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.

New Feature Code	1	BI040	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BI040						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
allowed values:	-999999					
Wireless Telecommunication Information : Wireless Telecommunication Type	1	No Information	Enumeration	Unitless	0	The type of a wireless telecommunication service based on the mechanism(s) of transmission and/or the nature of the communication(s) supported. [Description] For example, radio broadcast or mobile phone service.
allowed values:	Cellular Phone Other Television (TV)		Microwave Radio Relay Radio Broadcast		Mobile Phone Radio Telephone	No Information Radio-telegraph

Feature Smokestack (Point 00)New ☐ Smokestack

A vertical structure containing a passage or flue for discharging smoke and gases of combustion.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> <i>False</i>			<i>No Information</i>			<i>True</i>
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> <i>-999999</i>						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> <i>No Information</i> <i>Partially Operational</i>			<i>Non-operational</i> <i>Planned</i>			<i>Not in Operation</i> <i>Temporarily Non-operational</i> <i>Operational</i>
New Feature Code	1	AF010	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> <i>AF010</i>						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> <i>No Information</i>						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> <i>-999999</i>						
Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> <i>-999999</i>						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> <i>-999999</i>						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> <i>-999999</i>						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> <i>No Information</i>						

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.	
allowed values:	<i>No Information</i>						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.	
allowed values:	<i>No Information</i>						
Soil Depth	1	[-999999, -999999]	REAL_Interval	Metre	0	The depth of the soil or unconsolidated surface material. [Description] The soil layer ranges from the top of the organic horizon 'O' to the bottom of the substratum 'C'.	
allowed values:	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval	Greater-than Semi-interval Less-than Semi-interval
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.	
allowed values:	<i>No Information</i>						
Terrain Morphology	1	No Information	Enumeration	Unitless	0	The type of terrain morphology based on composition and/or configuration. [Description] Terrain morphology influences military operations such as mobility prediction, mining of construction materials, and identification of potential landing sites.	
allowed values:	Deep Erosional Gullies Landslide Potential <i>No Information</i> Numerous Rock Outcrops Scattered Boulders		Highly Dissected Moderately Dissected Numerous Boulders Numerous Terraces Steep Rugged Dissected with narrow Gullies			Highly Distorted with sharp Rocky Ridges Moderately Dissected with scattered Rock Outcrops Numerous Cobbles and Boulders <i>Other</i> Stony Areas	Irregular with deep Foliation Fractures No Effect Numerous Crevasses Rugged with numerous Rock Outcrops
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
allowed values:	<i>No Information</i>						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature SolarFarm (Area 00)New ☐ Solar Farm

An extensive collection of solar panels that are collocated and serve a common purpose (for example: the generation of electricity or the generation of heating steam and/or water). [Description] The collection is often organized as an array covering many hundreds of square metres in area and it may be controlled so as to track the direction of the sun throughout the day.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
allowed values:	No Information					
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.

allowed values: [-999999](#)

Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AD025	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AD025						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Electric Power			Heating Steam and/or Water			No Information Other
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Electric Power			Heating Steam and/or Water			No Information Other
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Aluminum Metal Wood						
Brick No Information						
Fibreglass Other						
Iron Steel						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Sounding (Point 00)

New ☐ Sounding

A spot depth or drying height that has been referenced to a vertical datum.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
New Feature Code	1	BE020	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> BE020						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<u>allowed values:</u> Accurate Approximate Doubtful No Information						
Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<u>allowed values:</u> -999999						
Hydrographic Drying Height	1	-999999	Real	Metre		The height of the feature, which tidal waters cover and uncover, referenced to a specified sounding datum.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<u>allowed values:</u> Army Geographic Agency (Netherlands) Army Geographic Centre (Spain) Army Geographic Institute (Portugal) Bundeswehr Geoinformation Office (Germany) Defence Acquisition and Logistics Organization (Denmark) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Defence Imagery and Geospatial Organisation (Australia) Defense Information Security (Italy) General Command of Mapping (Turkey) Geographic Service (Belgium) Geographic Service of the Czech Armed Forces (Czech Republic) Geospatial Information Agency (Latvia) Geospatial Intelligence Organisation (New Zealand) Hellenic Military Geographic Service (Greece) Joint Geography Bureau (France) Mapping and Charting Establishment (Canada) Mapping Service (Hungary) Military Geographic Group (Estonia) Military Geographic Service (Norway) Military Geography Division (Poland) Military Mapping Centre (Lithuania) Military Topographic Directorate (Romania) Military Topographic Service (Bulgaria) National Army Topographic Service (Moldova) No Information Swedish Armed Forces (Sweden) Topographic Institute (Slovakia) Topographic Service (Finland) U.S. Africa Command (USAFRICOM) U.S. Air Force U.S. Army U.S. Army Geospatial Center (AGC) U.S. Central Command (USCENTCOM) U.S. Central Intelligence Agency (CIA) U.S. Coast Guard U.S. Defense Intelligence Agency (DIA) U.S. Department of Energy (DOE) U.S. Department of Homeland Security (DHS) U.S. Department of State U.S. European Command (USEUCOM) U.S. Federal Bureau of Investigation (FBI) U.S. Geological Survey (USGS) U.S. Joint Forces Command (USJFCOM) U.S. Marine Corps U.S. National Civil Applications Program (NCAP) U.S. National Geospatial-Intelligence Agency (NGA) U.S. National Oceanic and Atmospheric Administration U.S. National Reconnaissance Office (NRO) U.S. National Security Agency (NSA) U.S. Navy U.S. Northern Command (USNORTHCOM) U.S. Pacific Command (PACOM) U.S. Southern Command (USSOUTHCOM) U.S. Special Operations Command (USSOCOM) U.S. Strategic Command (USSTRATCOM) U.S. Transportation Command (USTRANSCOM)						
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<u>allowed values:</u> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<u>allowed values:</u> No Information						

Water Line : Sounding Datum	1	No Information	Enumeration	Unitless	0	The tidal datum to which soundings and drying heights are referenced. [Description] It is usually taken to correspond to a low water stage of the tide.
<i>allowed values:</i>	<i>Drying Heights</i> <i>Slant</i>		No Information			<i>Ordinary</i> <i>Other</i>
Hydrographic Depth : Sounding Metadata : Sounding Velocity Correction Method	1	No Information	Enumeration	Unitless		The method of correction that has been used to correct a sounding velocity instrument reading to obtain the correct depth.
<i>allowed values:</i>	Mathews Tables Sound Velocity Meter		No Information Sounder 1500 Calibrated			<i>Not Applicable</i> Sounder 4800 Calibrated <i>Other</i> Sounder Other Calibrated
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i>	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Feature SpaceFacility (Area 00)New ☐ Space Facility**A facility that is used to support space related activities (for example: services such as assembly, launching or recovery of spacecraft or managing flight operations).**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i>	No Information					
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i>	-999999					
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i>	Civilian National Public		International No Information State			Joint Military and Civilian <i>Other</i> Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i>	No Information <i>Partially Operational</i>		Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AL351	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i>	AL351					
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i>	Accommodation Electrical Equipment Repair Meeting Place		Aircraft Repair Emergency Operations No Information			Defence Activities Fabricated Metal Product Repair <i>Other</i> Dining Hall Machinery Repair Warehousing and Storage

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. Feature SpatialMdEntCollect (Area 00)

New ☐ Spatial Metadata Entity Collection

A resource that collects instances of one or more modeling entities that share common source(s) and processing step(s) as the basis for their digital spatial representation. [Description] The modeling entity specifies metadata regarding the type(s) of data that were used to define the digital representation of the spatial component(s) of the entity collection. In a 2-dimensional representation the spatial component(s) are expressed as the horizontal coordinate values of the entity geometry. In a 3-dimensional representation the vertical coordinate values may be determined using a separate source and process (for example: stereoscopic imagery), in which case the 'vertical source' attributes may be additionally used for greater specificity.

	Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
New	Feature Code	1	ZI040	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> ZI040						
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
	<i>allowed values:</i> No Information						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

allowed values: No Information

Feature Spillway (Area 00)

New ☐ Spillway

A passage for surplus water to run over or around a dam.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Dam Face Type	1	No Information	Enumeration	Unitless		The type of slope of the upstream face of a dam.
<i>allowed values:</i> No Information			Other			Slope Vertical
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BH165	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BH165						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						

Process Step Information : Resource Content Originator		1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.	
allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)			Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)			Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)		1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.	
allowed values:	No Information							
Restriction Information : Security Attributes Group (resource owner-producer)		1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.	
allowed values:	No Information							
Specified Domain Values(s)		1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.	
allowed values:	No Information							
Structural Material Type		3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.	
allowed values:	Asphalt Masonry Reinforced Concrete			Brick No Information Rock			Composition Other Soil Concrete Prestressed Concrete Stone	
Unique Entity Identifier		1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
allowed values:	No Information							
Width		1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.	
allowed values:	-999999

Feature SportsGround (Area 00)New ☐ Sports Ground**An open area where sporting events, exercises, and/or games occur. [Description] For example, an athletic field, a playing field, and/or a sports field.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<u>allowed values:</u> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AK040	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> AK040						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.

Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
allowed values: <i>False</i>						<i>True</i>
allowed values: <i>Damaged</i> <i>No Information</i> <i>Unmaintained</i>			<i>Destroyed</i> <i>Ruined</i>			<i>Dismantled</i> <i>Site Preparation</i> <i>Intact</i> <i>Under Construction</i>
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: <i>U</i>						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values:	<div> Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) <i>No Information</i> Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM) </div> <div> Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) <i>Other</i> U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM) </div> <div> Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM) </div> <div> Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM) </div>					
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: <i>No Information</i>						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: <i>No Information</i>						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: <i>No Information</i>						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: <i>No Information</i>						

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature SportsGround (Point 00)

New ☐ Sports Ground

An open area where sporting events, exercises, and/or games occur. [Description] For example, an athletic field, a playing field, and/or a sports field.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AK040	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AK040						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

allowed values: -999999

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature SpotElevation (Point 00)

New ☐ Spot Elevation

A designated location with an elevation value relative to a vertical datum.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Absolute Vertical Accuracy (90%)	1	-999999	Real	Metre	0	The difference between the recorded elevation of a feature and its true elevation referenced to the same vertical datum expressed as a linear error at 90 percent probability. [Description] It may also be applied to a data set. If the data contains multiple accuracies, usually the worst accuracy which applies to 10% or more of the data is recorded.

allowed values: -999999

Elevation Surface Category	1	No Information	Enumeration	Unitless	0	The category of surface for which an elevation is determined.
<u>allowed values:</u> Inland Water Vegetation			Land Water			No Information Snow Field and/or Ice-field

New Feature Code	1	CA030	CONSTRAINED_STRING	Unitless	5	Feature Code
------------------	---	-------	--------------------	----------	---	--------------

allowed values: CA030

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.

Feature Stable (Area 00)

New ☐ Stable

A building similar to a barn and adapted for the shelter and feeding of domestic animals, being divided into individual stalls. [Description] Although commonly used to house horses, it may be used to house other animals (for example: prize cattle, sheep or goats) and often includes a storage loft (for example: for hay).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AJ080	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AJ080						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Animal Boarding Recreation			No Information			Other Raising of Animals
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.

<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Adobe Brick Masonry Prestressed Concrete Stone						
Brick Metal Reinforced Concrete Wood						
Concrete No Information Sod						
Iron Other Steel						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Wireless Telecommunication Information : Wireless Telecommunication Type	1	No Information	Enumeration	Unitless	0	The type of a wireless telecommunication service based on the mechanism(s) of transmission and/or the nature of the communication(s) supported. [Description] For example, radio broadcast or mobile phone service.
<i>allowed values:</i> Cellular Phone Other Television (TV)						
Microwave Radio Relay Radio Broadcast						
Mobile Phone Radio Telephone						
No Information Radio-telegraph

Feature Stable (Point 00)

New ☐ Stable

A building similar to a barn and adapted for the shelter and feeding of domestic animals, being divided into individual stalls. [Description] Although commonly used to house horses, it may be used to house other animals (for example: prize cattle, sheep or goats) and often includes a storage loft (for example: for hay).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public						
International No Information State						
Joint Military and Civilian Other						
Military Private						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational						
Non-operational Planned						
Not in Operation Temporarily Non-operational						
Operational						

New	Feature Code	1	AJ080	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AJ080						
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
	<i>allowed values:</i> Animal Boarding Recreation		No Information			Other	Raising of Animals
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999						
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999						
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False		No Information			True	
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<i>allowed values:</i> Damaged No Information Unmaintained		Destroyed Ruined			Dismantled Site Preparation	Intact Under Construction
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<i>allowed values:</i> U						
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature Stadium (Area 00)New ☐ Stadium

A field and/or stage partly or completely surrounded by a structure designed to allow spectators to stand or sit while viewing an event. [Description] The field and/or stage may be enclosed in a building or be outdoors. Stadiums are surrounded on most or all sides by tiered seating for spectators. Often designed in size and shape to accommodate specific sports (for example: baseball, football, basketball or ice hockey), theater or musical performances.

Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National State			International No Information			Joint Military and Civilian Other Military Private
Cover Closure Type	1	No Information	Enumeration	Unitless	0	The extent and/or nature of the cover (for example: a roof) of a structure.
<i>allowed values:</i> Complete Partial			Moveable			No Information Open
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AK160	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AK160						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Amusement Food Service Primary Education Secondary Education			Cinema No Information Recreation Sports Centre			Club Opera House Religious Activities Sports, Amusement and Recreation Education Other Restaurant Theatre
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.

<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False						
New Physical Condition			No Information	Enumeration	Unitless	The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined	True Dismantled Site Preparation Intact Under Construction		
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<i>allowed values:</i> Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i> Conical Flat with Parapet Pitched with Clerestory With Clerestory With Steeple			Domed No Information Pyramidal With Cupola With Tower			Flat Other Sawtoothed With Minaret With Turret Flat with Clerestory Pitched Semi-cylindrical With Smokestack
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
<i>allowed values:</i> No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature SteepGrade (Line 00)

New ☐ Steep Grade

A stretch along a land transportation route where the slope is high enough to slow, hinder, or even stop traffic. [Description] The percent (%) slope is the ratio of change in elevation (vertical distance) to horizontal ground distance multiplied by 100.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
New Feature Code	1	AQ120	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> AQ120						
Gradient Length	1	-999999	REAL	Metre	0	The length of a road or railway segment having a significant gradient, specifically greater than or equal to 7 percent (%) for a road or greater than or equal to 3 percent (%) for a railway.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False			No Information			True
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
----------------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Surface Slope	1	[-999999, -999999]	REAL_Interval	Percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Feature SteepTerrainFace (Line 00)

New ☐ Steep Terrain Face

A steep, vertical, or overhanging face of rock and/or soil. [Description] For example, an escarpment, a bluff, or a cliff.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Feature Code	1	DB010	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> DB010						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Predominant Feature Height	1	-999999	REAL	Metre	0	The predominant height (the height of at least 50 percent) of the feature measured from the lowest point of the base at ground or water level (downhill side/downstream side).
allowed values: -999999						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values: <div> Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM) </div> <div> Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM) </div> <div> Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM) </div> <div> Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM) </div>						
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						

Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> No Information			Other			Rock Soil
Surface Slope	1	[-999999, -999999]	REAL_Interval	Percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.
<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

New Feature Code	1	GB045	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> GB045						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

<i>allowed values:</i> Agriculture Manufacturing No Information Raising of Animals			Commerce Materials Recovery Other Sales Yard			Defence Activities Meeting Place Petroleum and/or Gas Extraction Transfer Hub Emergency Operations Mining and Quarrying Power Generation Wholesale Merchant
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
<i>allowed values:</i> False			No Information			True
Margin Number	1	-999999	Integer	Unitless		The numeric identifier used to relate a feature instance to additional information about that feature instance that may be presented along the margin (outside the neat line) of a map or chart sheet on which that feature instance is portrayed. [Description] The scope of uniqueness may only be within the map or chart sheet.

<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False No Information True						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged Destroyed Dismantled Intact No Information Ruined Site Preparation Under Construction Unmaintained						
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Aircraft Ammunition Biodiesel Chemical Coal Cobbles Coke Explosive Gas Gravel Lumber No Information Other Petroleum Radioactive Material Salt Sand Stone Timber Tobacco Uranium Water						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						

Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature StorageTank (Area 00)

New ☐ Storage Tank

A container used for the storage of liquids and/or gases that is not supported by a tower.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999						
Containment Berm Present	1	No Information	Boolean	Unitless	0	An indication that a facility (for example: a storage tank, a drum storage area, or a liquid transfer area) is surrounded by an embankment or wall that provides a barrier to retain liquid (for example: leaked fuel oil). [Description] The embankment or wall is typically part of a spill containment system that may additionally provide fire protection, product recovery and/or process isolation.
<i>allowed values:</i> False			No Information			True
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.

<i>allowed values:</i> <div>No Information Partially Operational</div>		Non-operational Planned		Not in Operation Temporarily Non-operational		Operational	
New	Feature Code	1	AM070	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i> <div>AM070</div>							
Geographic Name Information : Full Name		2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> <div>No Information</div>							
Geographic Name Type		2	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> <div>Conventional Other</div>				Historical Transliterated Provisional			<div>Native Transliterated Unverified Transliterated</div> <div>No Information Variant Transliterated</div>
Height Above Surface Level		1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> <div>-999999</div>							
Highest Elevation		1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> <div>-999999</div>							
Hydrologic Persistence		1	No Information	Enumeration	Unitless		The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> <div>Dry Perennial</div>				Ephemeral			<div>Intermittent</div> <div>No Information</div>
Length		1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> <div>-999999</div>							
Located Underground		1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
<i>allowed values:</i> <div>False</div>				No Information			True
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> <div>-999999</div>							
Note : Memorandum		1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> <div>No Information</div>							
Geographic Name Information : Name Identifier		2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> <div>No Information</div>							
Navigation Landmark		1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> <div>False</div>				No Information			True
New	Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> <div>-999999</div>							

New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
allowed values: <i>Damaged</i> <i>Destroyed</i> <i>Dismantled</i> <i>Intact</i> <i>No Information</i> <i>Ruined</i> <i>Site Preparation</i> <i>Under Construction</i> <i>Unmaintained</i>							
	Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
allowed values: Biodiesel Chemical Food Gas Liquefied Natural Gas (LNG) Liquefied Petroleum Gas (LPG) No Information Other Petrol Petroleum Radioactive Material Sewage Water							
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: <i>U</i>							
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values: Army Geographic Agency (Netherlands) Army Geographic Centre (Spain) Army Geographic Institute (Portugal) Bundeswehr Geoinformation Office (Germany) Defence Acquisition and Logistics Organization (Denmark) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Defence Imagery and Geospatial Organisation (Australia) Defense Information Security (Italy) General Command of Mapping (Turkey) Geographic Service (Belgium) Geographic Service of the Czech Armed Forces (Czech Republic) Geospatial Information Agency (Latvia) Geospatial Intelligence Organisation (New Zealand) Hellenic Military Geographic Service (Greece) Joint Geography Bureau (France) Mapping and Charting Establishment (Canada) Mapping Service (Hungary) Military Geographic Group (Estonia) Military Geographic Service (Norway) Military Geography Division (Poland) Military Mapping Centre (Lithuania) Military Topographic Directorate (Romania) Military Topographic Service (Bulgaria) National Army Topographic Service (Moldova) No Information Other Swedish Armed Forces (Sweden) Topographic Institute (Slovakia) Topographic Service (Finland) U.S. Africa Command (USAFRICOM) U.S. Air Force U.S. Army U.S. Army Geospatial Center (AGC) U.S. Central Command (USCENTCOM) U.S. Central Intelligence Agency (CIA) U.S. Coast Guard U.S. Defense Intelligence Agency (DIA) U.S. Department of Energy (DOE) U.S. Department of Homeland Security (DHS) U.S. Department of State U.S. European Command (USEUCOM) U.S. Federal Bureau of Investigation (FBI) U.S. Geological Survey (USGS) U.S. Joint Forces Command (USJFCOM) U.S. Marine Corps U.S. National Civil Applications Program (NCAP) U.S. National Geospatial-Intelligence Agency (NGA) U.S. National Oceanic and Atmospheric Administration U.S. National Reconnaissance Office (NRO) U.S. National Security Agency (NSA) U.S. Navy U.S. Northern Command (USNORTHCOM) U.S. Pacific Command (PACOM) U.S. Southern Command (USSOUTHCOM) U.S. Special Operations Command (USSOCOM) U.S. Strategic Command (USSTRATCOM) U.S. Transportation Command (USTRANSCOM)							
	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: <i>No Information</i>							
	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: <i>No Information</i>							
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: <i>No Information</i>							
	Structure Shape	1	No Information	Enumeration	Unitless	0	The geometric form, appearance, and/or configuration of the feature as a whole.

	<i>allowed values:</i>	Arched Cubic Cylindrical with Flat Top Horizontal Capped Cylindrical Obelisk Rectangular Prism Statue		Board-like Prism Cylindrical on Tower Cylindrical with Framework Horizontal Cylindrical Other Spherical Statue on Pedestal		Columnar Cylindrical with Conical Top Domed Multiple Arched Plaque Spherical on Column Vertical Capped Cylindrical		Cross Cylindrical with Domed Top Funnel Shaped No Information Pyramidal Square Prism Vertical Cylindrical
New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.	
	<i>allowed values:</i>	-999999						
	Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.	
	<i>allowed values:</i>	False		No Information		True		
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.	
	<i>allowed values:</i>	-999999						
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.	
	<i>allowed values:</i>	-999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).	
	<i>allowed values:</i>	-999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
	<i>allowed values:</i>	No Information						
	Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).	
	<i>allowed values:</i>	Aluminum Metal Reinforced Concrete		Concrete No Information Steel			Iron Other	Masonry Prestressed Concrete
	Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.	
	<i>allowed values:</i>	No Information						
	Volume	1	-999999	REAL	Cubic Metre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.	
	<i>allowed values:</i>	-999999						
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.	
	<i>allowed values:</i>	-999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.	
	<i>allowed values:</i>	-999999						
	Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.	
	<i>allowed values:</i>	Contaminated Potable		No Information Treatable			Nonpotable	Other

Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i>	Alkaline No Information		Brackish Other			Fresh Saline Mineral
New Water Resource Information : Water Use	3	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
<i>allowed values:</i>	Agricultural Irrigation Institutional Other		Commercial Livestock Power Generation			Domestic Irrigation Municipal Recreational Industrial No Information Sanitary Domestic
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

New	Feature Code	1	AM070	CONSTRAINED_ STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AM070						
	Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
	Geographic Name Type	2	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Other			Historical Transliterated Provisional			Native Transliterated Unverified Transliterated No Information Variant Transliterated
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999						
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999						
	Hydrologic Persistence	1	No Information	Enumeration	Unitless		The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<i>allowed values:</i> Dry Perennial			Ephemeral			Intermittent No Information
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999						
	Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
	<i>allowed values:</i> False			No Information			True
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<i>allowed values:</i> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						

	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False		No Information				True
New	Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<i>allowed values:</i> -999999						
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<i>allowed values:</i> Damaged No Information Unmaintained		Destroyed Ruined			Dismantled Site Preparation	Intact Under Construction
	Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
	<i>allowed values:</i> Biodiesel Liquefied Natural Gas (LNG) Petrol Water		Chemical Liquefied Petroleum Gas (LPG) Petroleum			Food No Information Radioactive Material	Gas Other Sewage
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<i>allowed values:</i> U						
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
	<i>allowed values:</i> Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)		Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
	<i>allowed values:</i> No Information						
	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
	<i>allowed values:</i> No Information						
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.

<i>allowed values:</i> No Information						
Structure Shape	1	No Information	Enumeration	Unitless	0	The geometric form, appearance, and/or configuration of the feature as a whole.
<i>allowed values:</i> <div> <div>Arched</div> <div>Cubic</div> <div>Cylindrical with Flat Top</div> <div>Horizontal Capped Cylindrical</div> <div>Obelisk</div> <div>Rectangular Prism</div> <div>Statue</div> </div> <div> <div>Board-like Prism</div> <div>Cylindrical on Tower</div> <div>Cylindrical with Framework</div> <div>Horizontal Cylindrical</div> <div>Other</div> <div>Spherical</div> <div>Statue on Pedestal</div> </div> <div> <div>Columnar</div> <div>Cylindrical with Conical Top</div> <div>Domed</div> <div>Multiple Arched</div> <div>Plaque</div> <div>Spherical on Column</div> <div>Vertical Capped Cylindrical</div> </div> <div> <div>Cross</div> <div>Cylindrical with Domed Top</div> <div>Funnel Shaped</div> <div>No Information</div> <div>Pyramidal</div> <div>Square Prism</div> <div>Vertical Cylindrical</div> </div>						
New Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999						
Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
<i>allowed values:</i> False <div>No Information</div> <div>True</div>						
New Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999						
New Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999						
New Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> <div> <div>Aluminum</div> <div>Metal</div> <div>Reinforced Concrete</div> </div> <div> <div>Concrete</div> <div>No Information</div> <div>Steel</div> </div> <div> <div>Iron</div> <div>Other</div> </div> <div> <div>Masonry</div> <div>Prestressed Concrete</div> </div>						
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
<i>allowed values:</i> No Information						
Volume	1	-999999	REAL	Cubic Metre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<i>allowed values:</i> -999999						
New Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
<i>allowed values:</i> -999999						
New Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
<i>allowed values:</i> -999999						
Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.

<i>allowed values:</i> Contaminated Potable		No Information Treatable		Nonpotable		Other
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline No Information		Brackish Other		Fresh Saline		Mineral
New Water Resource Information : Water Use	3	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional Other		Commercial Livestock Power Generation		Domestic Irrigation Municipal Recreational		Industrial No Information Sanitary Domestic
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature StormDrain (Point 00)New ☐ Storm Drain**A collector opening into a pipe or channel to allow the removal of excess runoff water or in some cases sewage. [Description] In civil engineering terms, a drop inlet.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational		Operational
New Feature Code	1	AQ114	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AQ114						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

allowed values: -999999

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.				
<i>allowed values:</i> No Information										
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.

Feature StreetLamp (Point 00)

New ☐ Street Lamp

A lamp intended to illuminate a road. [Description] May also illuminate the ground adjacent to the road. Usually attached to a tall pole.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<u>allowed values:</u> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AQ161	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> AQ161						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i>			-999999			
Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i>			-999999			
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i>			-999999			
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i>			-999999			

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.

<i>allowed values:</i> Metal Wood			No Information			Other	Plastic
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Feature SurfaceBunker (Area 00)

New ☐ Surface Bunker

A surface structure that may be covered and/or surrounded with earth and is resistant to ordnance. [Description] Used, for example, for storage and/or aircraft protection.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AM060	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AM060						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The type of designated hazard protection shelter based on the kind of emergency. [Description] These shelters may be inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
<i>allowed values:</i> Bomb Shelter Storm Shelter			Fallout Shelter			No Information Other
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

<i>allowed values:</i> -999999						
Margin Number	1	-999999	Integer	Unitless		The numeric identifier used to relate a feature instance to additional information about that feature instance that may be presented along the margin (outside the neat line) of a map or chart sheet on which that feature instance is portrayed. [Description] The scope of uniqueness may only be within the map or chart sheet.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged Destroyed Dismantled Intact No Information Ruined Site Preparation Under Construction Unmaintained						
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Ammunition Chemical Explosive No Information Other Petrol Radioactive Material Uranium						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<i>allowed values:</i> Army Geographic Agency (Netherlands) Army Geographic Centre (Spain) Army Geographic Institute (Portugal) Bundeswehr Geoinformation Office (Germany) Defence Acquisition and Logistics Organization (Denmark) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Defence Imagery and Geospatial Organisation (Australia) Defense Information Security (Italy) General Command of Mapping (Turkey) Geographic Service (Belgium) Geographic Service of the Czech Armed Forces (Czech Republic) Geospatial Information Agency (Latvia) Geospatial Intelligence Organisation (New Zealand) Hellenic Military Geographic Service (Greece) Joint Geography Bureau (France) Mapping and Charting Establishment (Canada) Mapping Service (Hungary) Military Geographic Group (Estonia) Military Geographic Service (Norway) Military Geography Division (Poland) Military Mapping Centre (Lithuania) Military Topographic Directorate (Romania) Military Topographic Service (Bulgaria) National Army Topographic Service (Moldova) No Information Other Swedish Armed Forces (Sweden) Topographic Institute (Slovakia) Topographic Service (Finland) U.S. Africa Command (USAFRICOM) U.S. Air Force U.S. Army U.S. Army Geospatial Center (AGC) U.S. Central Command (USCENTCOM) U.S. Central Intelligence Agency (CIA) U.S. Coast Guard U.S. Defense Intelligence Agency (DIA) U.S. Department of Energy (DOE) U.S. Department of Homeland Security (DHS) U.S. Department of State U.S. European Command (USEUCOM) U.S. Federal Bureau of Investigation (FBI) U.S. Geological Survey (USGS) U.S. Joint Forces Command (USJFCOM) U.S. Marine Corps U.S. National Civil Applications Program (NCAP) U.S. National Geospatial-Intelligence Agency (NGA) U.S. National Oceanic and Atmospheric Administration U.S. National Reconnaissance Office (NRO) U.S. National Security Agency (NSA) U.S. Navy U.S. Northern Command (USNORTHCOM) U.S. Pacific Command (PACOM) U.S. Southern Command (USSOUTHCOM) U.S. Special Operations Command (USSOCOM) U.S. Strategic Command (USSTRATCOM) U.S. Transportation Command (USTRANSCOM)						
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Swamp (Area 00)

New ☐ Swamp

A seasonally flooded, poorly drained wetland with more woody plants than a marsh and better drainage than a bog. [Description] It is covered with water all or most of the year, and accumulating dead vegetation does not rapidly decay. It can exist on flat-lying areas created by certain geomorphic environments. The vegetation mainly consists of hydrophytic trees and/or scrubs whose roots are adapted to wet conditions, with an open to very dense canopy closure. A subtype of the more generalized wetland.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<u>allowed values:</u> -999999						
Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> [-999999, -999999]			No Information			
Bottom Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing the bottom of a body of water.
<u>allowed values:</u> Bedrock Other Sand and Gravel			Clay and Silt Peat Sand over Mud			Gravel and Cobble Rocks and Boulders Silty Sands No Information Sand Soil
Canopy Cover	1	-999999	REAL	Percent	0	The fraction of canopy cover within a defined area during the season of maximum foliage. [Description] The canopy is formed by the upper branches of the trees in a forest forming a more or less continuous layer.
<u>allowed values:</u> -999999						
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<u>allowed values:</u> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<u>allowed values:</u> -999999						
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<u>allowed values:</u> -999999						
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<u>allowed values:</u> -999999						
New Feature Code	1	ED020	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> ED020						
Foliage Type	1	No Information	Enumeration	Unitless	0	The predominant foliage type of the vegetation.
<u>allowed values:</u> Deciduous Other			Evergreen			Mixed No Information
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.

	<u>allowed values:</u> -999999					
Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
	<u>allowed values:</u> -999999					
Hydrologic Persistence	1	No Information	Enumeration	Unitless		The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<u>allowed values:</u> Dry Perennial		Ephemeral		Intermittent	No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999					
New Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<u>allowed values:</u> -999999					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information					
New Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<u>allowed values:</u> -999999					
Predominant Maximum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<u>allowed values:</u> [-999999, -999999]		No Information			
Predominant Minimum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<u>allowed values:</u> [-999999, -999999]		No Information			
Predominant Vegetation Height	1	-999999	REAL	Metre	0	The predominant height (the height of at least 50 percent) of the vegetation.
	<u>allowed values:</u> -999999					
Predominant Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<u>allowed values:</u> [-999999, -999999]		No Information			
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<u>allowed values:</u> U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Stem Diameter	1	[-999999, -999999]	REAL_Interval	Decimetre	0	The average diameter of the tree trunks in an area, measured at a height of approximately 1.5 metres or 4.5 feet on the high side (if on a hillside) above the surface of the ground. [Description] Commonly referred to as the 'diameter at breast height' (dbh). For trees up to 2 metres high, the stem diameter is measured at the mid-point between the ground and the stem tip.
allowed values:	[-999999, -999999] Greater-than Semi-interval Less-than Semi-interval		-999999 Greater-than to Less-than-or-equal Interval No Information		Closed Interval Greater-than-or-equal to Less-than Interval Open Interval Greater-than or Equal Semi-interval Less-than or Equal Semi-interval	
Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
allowed values:	-999999					
Water Resource Information : Temperature	1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
allowed values:	-999999					
Tide Influenced	1	No Information	Boolean	Unitless	0	An indication that a waterbody is affected by the tide.
allowed values:	False		No Information		True	
Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.
allowed values:	-999999					
Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units		The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
allowed values:	-999999					

	Undergrowth Density	1	[-999999, -999999]	REAL_Interval	Percent	0	The fraction of land within a defined area that is covered by undergrowth (for example: scrub, brush, and/or bush).	
	<i>allowed values:</i>	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval		Greater-than Semi-interval Less-than Semi-interval
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
	<i>allowed values:</i>	No Information						
	Vegetation Species	3	No Information	Enumeration	Unitless	0	The predominant species of a tract of vegetation.	
	<i>allowed values:</i>	Cypress Other		Mangrove		Nipa		No Information
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime		The electrical conductivity of water.	
	<i>allowed values:</i>	-999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre		The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.	
	<i>allowed values:</i>	-999999						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless		The potability of water based on the type of treatment required before it is safe for human consumption.	
	<i>allowed values:</i>	Contaminated Potable		No Information Treatable		Nonpotable		Other
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.	
	<i>allowed values:</i>	Alkaline Mineral Saline		Brackish No Information Seawater		Brine Not Applicable		Fresh Other
New	Water Resource Information : Water Use	1	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.	
	<i>allowed values:</i>	Agricultural Irrigation Institutional Other		Commercial Livestock Power Generation		Domestic Irrigation Municipal Recreational		Industrial No Information Sanitary Domestic
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.	
	<i>allowed values:</i>	-999999

Feature SweptArea (Area 00) New ☐ Swept Area

A region that has been determined to be clear of navigational dangers to a specified depth.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Hydrographic Depth : Sounding Metadata : Bathymetric Measurement Quality Category	3	No Information	Enumeration	Unitless	0	A general evaluation of the qualities of a bathymetric measurement, as a category. [Description] Drying heights are typically captured using negative (bathymetric) sounding values; their certainty of measurement may be categorized in the same manner as positive values.
<i>allowed values:</i> Depth Doubtful Depth Known Depth Unknown Depth Unreliable Least Depth Maintained Depth No Bottom No Information <i>Not Applicable</i> Other Reported Depth Safe Clearance Known Unconfirmed Depth Unmaintained Depth						
Hydrographic Depth : Sounding Metadata : Bathymetric Measurement Technique	3	No Information	Enumeration	Unitless	0	The technique used to determine water depth(s).
<i>allowed values:</i> Area Swept by Side-scan Sonar Area Swept by Vertical Acoustic System Area Swept by Wire-drag Bathymetric LiDAR Computer Generated Diver Echo Sounder Electromagnetic Sensor Lead-line Levelling Multi-beam Echo Sounder No Information Other Photogrammetry Satellite Imagery Side-scan Sonar Singlebeam Underwater Utility Vehicle						
New Feature Code	1	FC177	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i> FC177						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Hydrographic Depth	1	-999999	REAL	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature SwimmingPool (Area 00)New ☐ **Swimming Pool****A man-made pool used for swimming outdoors.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
Average Water Depth	1	[-999999, - 999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999, -999999] No Information						

New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<i>allowed values:</i> -999999						
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999						
New	Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
	<i>allowed values:</i> -999999						
	Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	AK170	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AK170						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
	Hydrologic Persistence	1	No Information	Enumeration	Unitless		The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<i>allowed values:</i> Dry Perennial			Ephemeral			Intermittent No Information
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<i>allowed values:</i> -999999						
New	Maximum Water Depth	1	-999999	Real	Metre		Maximum water depth the object was designed to hold.
	<i>allowed values:</i> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						

	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False		No Information				True
New	Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<i>allowed values:</i> -999999						
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.

	<i>allowed values:</i> No Information						
	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
	<i>allowed values:</i> No Information						
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
	<i>allowed values:</i> No Information						
New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
	<i>allowed values:</i> -999999						

New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.	
	<i>allowed values:</i> -999999						
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	The total mass of dissolved inorganic chemical constituents per volume of solution.	
	<i>allowed values:</i> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).	
	<i>allowed values:</i> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<i>allowed values:</i> No Information						
	Volume	1	-999999	REAL	Cubic Metre	The volume of a feature. [Description] For example, the storage capacity of a water tower.	
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	The electrical conductivity of water.	
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.	
	<i>allowed values:</i> -999999						
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	The type of available water based on its composition.	
	<i>allowed values:</i> Alkaline Mineral Saline			Brackish No Information Seawater	Brine Not Applicable	Fresh Other	
New	Water Resource Information : Water Use	1	No Information	Enumeration	Unitless	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.	
	<i>allowed values:</i> Agricultural Irrigation Institutional Other			Commercial Livestock Power Generation	Domestic Irrigation Municipal Recreational	Industrial No Information Sanitary Domestic	
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature **SwimmingPool (Point 00)**New ☐ **Swimming Pool****A man-made pool used for swimming outdoors.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999, -999999]			No Information			
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Military Other Private
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999						
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AK170	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AK170						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Hydrologic Persistence	1	No Information	Enumeration	Unitless		The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry Perennial			Ephemeral			Intermittent No Information

	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<i>allowed values:</i> -999999						
New	Maximum Water Depth	1	-999999	Real	Metre		Maximum water depth the object was designed to hold.
	<i>allowed values:</i> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False			No Information			True
New	Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<i>allowed values:</i> -999999

	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.	
	<i>allowed values:</i> Chemical Manufacture Petroleum Refining			No Information Power Generation			Other Transfer Hub	Petroleum and/or Gas Extraction Utilities
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.	
	<i>allowed values:</i> No Information							
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.	
	<i>allowed values:</i> -999999							
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.	
	<i>allowed values:</i> -999999							
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
	<i>allowed values:</i> -999999

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: <i>No Information</i>						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: <i>No Information</i>						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: <i>No Information</i>						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: <i>No Information</i>						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
allowed values: <i>-999999</i>						
Wireless Telecommunication Information : Wireless Telecommunication Type	1	No Information	Enumeration	Unitless	0	The type of a wireless telecommunication service based on the mechanism(s) of transmission and/or the nature of the communication(s) supported. [Description] For example, radio broadcast or mobile phone service.

allowed values:	Cellular Phone	Microwave Radio Relay	Mobile Phone	No Information
	Other	Radio Broadcast	Radio Telephone	Radio-telegraph

Feature TankFarm (Point 00)New ☐ Tank Farm

A tract of land occupied by large-capacity tanks in which petroleum, natural gas, or liquid petrochemicals are stored. [Description] The tanks are usually round, constructed from metal plates, and separated from each other by berms intended to contain any leakage.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
allowed values: No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
allowed values: Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
allowed values: No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AM071	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: AM071						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
allowed values: Chemical Manufacture Petroleum Refining			No Information Power Generation			Other Transfer Hub Petroleum and/or Gas Extraction Utilities
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values: No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
allowed values: -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
allowed values: -999999						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.					
<u>allowed values:</u> -999999											
Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.					
<u>allowed values:</u> False											
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.					
<u>allowed values:</u> No Information											
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.					
<u>allowed values:</u> No Information											
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.					
<u>allowed values:</u> False											
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.					
	<u>allowed values:</u> Damaged No Information Unmaintained		Destroyed Ruined		Dismantled Site Preparation		Intact Under Construction				
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.					
<u>allowed values:</u> Biodiesel Liquefied Petroleum Gas (LPG) Petroleum		Chemical No Information		Gas Other		Liquefied Natural Gas (LNG) Petrol					
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.					
<u>allowed values:</u> U											
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.					
<u>allowed values:</u> Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)			Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)			Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)			Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. Feature Taxiway (Area 00)

New ☐ Taxiway

A defined path at an aerodrome established for the taxiing of aircraft and intended to provide a ground movement link between one part of the aerodrome and another.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aerodrome Pavement Information : Aerodrome Movement Area Surface Category	1	No Information	Enumeration	Unitless	0	The level of preparation of the aerodrome movement area surface, as a category. [Description] Common category types may range from natural to completely paved.
<i>allowed values:</i> Completely Paved Partially Paved			Mostly Paved Unpaved		No Information Unprepared	Other

Aerodrome Pavement Information : Aerodrome Movement Area Surface Composition	3	No Information	Enumeration	Unitless	0	The type of the predominant material of which a surface of the movement area is composed. [Description] Example surfaces include: asphalt, concrete, or grass.
allowed values: Asphalt Clay Gravel Macadam Other Stone			Asphalt Over Concrete Concrete Ice Membrane Pierced Steel Planking Water			Bituminous Mix Coral Landing Mat No Information Sand Wood Brick Earthen Laterite Non-bituminous Mix Snow
Aerodrome Pavement Information : Aerodrome Movement Area Surface Preparation Method	3	No Information	Enumeration	Unitless	0	The preparation technique(s) applied to a surface composition.
allowed values: Aggregate Seal Coat No Information Rolled			Graded Oiled Rubberized Seal Coat			Grass Other Grooved Porous Friction Course
Aerodrome Pavement Information : Aerodrome Pavement Functional Status	1	No Information	Enumeration	Unitless	0	The functional status of the pavement of an aerodrome movement area. [Description] An aerodrome movement area is that part of an aerodrome to be used for aircraft movement operations, consisting of the manoeuvring area and the apron(s).
allowed values: Fair No Information Unserviceable			Fair Estimated Poor			Good Poor Estimated Good Estimated Under Construction
Aerodrome Surface Status	1	No Information	Enumeration	Unitless	0	The operational status of an aerodrome movement area, as a category. [Description] For example: serviceable, unserviceable, closed, or work-in-progress.
allowed values: Closed Work in Progress			No Information			Open Parked or Disabled Aircraft
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
Deck Level	1	-999999	REAL	Unitless	0	The relative level of a deck within a set of vertically stacked decks, one over another, in a transportation structure (for example: on a bridge or in a tunnel). [Description] The lowest deck is numbered '1' and the remaining decks are numbered in ascending order (bottom to top) with the uppermost deck being assigned the highest value.
allowed values: -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
allowed values: No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	GB075	CONSTRAINED_ STRING	Unitless	5	Feature Code
allowed values: GB075						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values: No Information						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
allowed values: -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

allowed values:	-999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
allowed values:	No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
allowed values:	No Information						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.

allowed values: Aggregate Seal Coat No Information Rolled			Graded Oiled Rubberized Seal Coat			Grass Other Grooved Porous Friction Course
Aerodrome Pavement Information : Aerodrome Pavement Functional Status	1	No Information	Enumeration	Unitless	0	The functional status of the pavement of an aerodrome movement area. [Description] An aerodrome movement area is that part of an aerodrome to be used for aircraft movement operations, consisting of the manoeuvring area and the apron(s).

<i>allowed values:</i> Fair No Information Unserviceable			Fair Estimated Poor			Good Poor Estimated	Good Estimated Under Construction
Aerodrome Surface Status	1	No Information	Enumeration	Unitless	0	The operational status of an aerodrome movement area, as a category. [Description] For example: serviceable, unserviceable, closed, or work-in-progress.	
<i>allowed values:</i> Closed Work in Progress			No Information			Open	Parked or Disabled Aircraft
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.	
<i>allowed values:</i> -999999							
Deck Level	1	-999999	REAL	Unitless	0	The relative level of a deck within a set of vertically stacked decks, one over another, in a transportation structure (for example: on a bridge or in a tunnel). [Description] The lowest deck is numbered '1' and the remaining decks are numbered in ascending order (bottom to top) with the uppermost deck being assigned the highest value.	
<i>allowed values:</i> -999999							
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.	
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational	Operational
New Feature Code	1	GB075	CONSTRAINED_STRING	Unitless	5	Feature Code	
<i>allowed values:</i> GB075							
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.	
<i>allowed values:</i> No Information							
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.	
<i>allowed values:</i> -999999							
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<i>allowed values:</i> -999999							
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i> No Information							
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i> No Information							
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.	
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation	Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
<i>allowed values:</i> U							
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Taxiway Type	1	No Information	Enumeration	Unitless	0	The type of an aircraft taxiway based on its connectivity to other aerodrome ground surfaces.
allowed values:	Air Taxiway Helicopter Ground Taxiway No Information Rapid Exit and/or Turnoff Taxiway		Aircraft Stand Taxilane Lead-in Taxilane Other Stub Taxiway		Apron Taxiway Lead-out Taxilane Parallel Taxiway Turnaround Taxiway	Dispersal Loop Perimeter
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature TetheredBalloon (Point 00)

New ☐ Tethered Balloon

A balloon that is tethered to the ground at an anchoring device (for example: a ring and pad) or substantial structure (for example: a mooring tower). [Description] It is usually deployed for extended periods of time and may be used, for example, for weather sensing and/or observation of the surrounding terrain.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> <i>False</i>			<i>No Information</i>			<i>True</i>
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> <i>No Information</i> <i>Partially Operational</i>			<i>Non-operational</i> <i>Planned</i>			<i>Not in Operation</i> <i>Temporarily Non-operational</i> <i>Operational</i>
New Feature Code	1	AL510	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> <i>AL510</i>						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> <i>No Information</i>						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> <i>-999999</i>						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> <i>-999999</i>						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). <u>allowed values:</u> EB020						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Predominant Vegetation Height	1	-999999	REAL	Metre	0	The predominant height (the height of at least 50 percent) of the vegetation.
<u>allowed values:</u> -999999						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Undergrowth Density	1	[-999999, -999999]	REAL_Interval	Percent	0	The fraction of land within a defined area that is covered by undergrowth (for example: scrub, brush, and/or bush).
allowed values:	[-999999, -999999] <i>Greater-than to Less-than-or-equal Interval</i> <i>Open Interval</i>		<i>Closed Interval</i> <i>Greater-than-or-equal to Less-than Interval</i>		<i>Greater-than or Equal Semi-interval</i> <i>Less-than or Equal Semi-interval</i> <i>Greater-than Semi-interval</i> <i>Less-than Semi-interval</i>	
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Vegetation Characteristic	1	No Information	Enumeration	Unitless	0	The type of a vegetated area based on species, biome, physiography and/or structural organization.
allowed values:	Brush Other		Grassland with Trees		Meadow	No Information
Vegetation Trafficability Impact	1	[-999999, -999999]	Real_Interval	Percent		The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
allowed values:	[-999999, -999999]					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature TidalWater (Area 00)New ☐ Tidal Water**Any water the level of which changes periodically due to tidal action.**

	Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
	Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
	<u>allowed values:</u> -999999						
	Average Water Depth	1	[-999999,-999999]	REAL_INTERVAL	Metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<u>allowed values:</u> [-999999,-999999]						
	Bottom Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing the bottom of a body of water.
	<u>allowed values:</u> Bedrock Masonry Peat Silty Sands			Clay and Silt No Information Reinforced Concrete Soil			Concrete Other Rocks and Boulders Gravel and Cobble Paved Sand and Gravel
New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<u>allowed values:</u> -999999						
New	Feature Code	1	BA040	CONSTRAINED_STRING	Unitless	5	Feature Code
	<u>allowed values:</u> BA040						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
	Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Other			Historical Transliterated Provisional			Native Transliterated Unverified Transliterated No Information Variant Transliterated
	Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
	<u>allowed values:</u> -999999						

Hydrologic Persistence	1	No Information	Enumeration	Unitless		The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i>	Dry Perennial		<i>Ephemeral</i>			Intermittent No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i>	-999999					
New Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i>	-999999					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i>	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i>	No Information					
New Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i>	-999999					
Predominant Maximum Water Depth	1	[-999999,-999999]	Real_Interval	Metre	0	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i>	(0.8, 1.6] [-999999,-999999]		(1.6, 2.4]		(2.4, INFINITY)	(-INFINITY, 0.8]
Predominant Minimum Water Depth	1	[-999999,-999999]	Real_Interval	Metre	0	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i>	(0.8, 1.6] [-999999,-999999]		(1.6, 2.4]		(2.4, INFINITY)	(-INFINITY, 0.8]
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i>	U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
New Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
allowed values: -999999						
New Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
allowed values: -999999						
New Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
allowed values: -999999						
New Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
allowed values: -999999						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
New Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
allowed values: -999999						

New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i> -999999						
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.
	<i>allowed values:</i> Alkaline Mineral Saline			Brackish No Information Seawater		Brine Not Applicable	Fresh Other
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature Tomb (Area 00)New ☐ Tomb

A structure within which a corpse is entombed. [Description] It is often a building-like structure that may be partly or wholly underground (except for its entrance), but may be a simple enclosure cut into solid rock (for example: into a cliff face or inside of a cave). It may contain a single corpse or a related group (for example: a family) may be entombed together.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition	
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.	
<i>allowed values:</i> -999999							
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.	
<i>allowed values:</i> -999999							
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).	
<i>allowed values:</i>		Civilian National State	International No Information	Joint Military and Civilian Other	Military Private		
New	Deepest Depth Below Surface Level	1	-999999	Real	Metre	The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.	
<i>allowed values:</i> -999999							
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.	
<i>allowed values:</i>		No Information Partially Operational	Non-operational Planned	Not in Operation Temporarily Non-operational	Operational		
New	Feature Code	1	AL036	CONSTRAINED_ STRING	Unitless	5	Feature Code

<i>allowed values:</i> AL036						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i> Accurate						
Least Depth Below Surface Level	1	-999999	Approximate			Doubtful
			Real	Metre		No Information
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.

Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)		Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.	
allowed values:	No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.	
allowed values:	No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.	
allowed values:	No Information						
Structure Shape	1	No Information	Enumeration	Unitless	0	The geometric form, appearance, and/or configuration of the feature as a whole.	
allowed values:	Arched No Information Pyramidal		Columnar Obelisk Spherical			Cross Other Statue	Multiple Arched Plaque Statue on Pedestal
Tomb Type	1	No Information	Enumeration	Unitless	0	The type of structure within which a corpse is entombed based on its method of construction, location, and/or occupancy.	
allowed values:	Burial Mound Crypt Surface Vault		Catacomb Mausoleum			Cave No Information	Columbarium Other
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
allowed values:	No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.	
allowed values:	No Information

Feature Tower (Area 00)New ☐ Tower

A relatively tall, narrow structure that may either stand alone or may form part of another structure. [Description] Usually of a square, circular, or rectangular cross-section.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Cable Type	1	No Information	Enumeration	Unitless		The type of a cable based on its use.
<i>allowed values:</i> Barrier Fibre-optic Other Telephone			Cableway Guide Power Line Tethering			Communication Line Load Bearing Restraining Towing Digital Communication Line No Information Telegraph Transmission Line
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National State			International No Information			Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AL241	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL241						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Guyed	1	No Information	Boolean	Unitless	0	An indication that an object is guided, secured, or steadied by guy wires.
<i>allowed values:</i> False			No Information			True
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999						

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information		True	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction
Pylon Configuration	1	No Information	Enumeration	Unitless	0	The configuration of a pylon or pole.
<i>allowed values:</i> 'A' Other			'H' 'T'		'I' 'Y'	No Information
Pylon Material	1	No Information	Enumeration	Unitless	0	The primary type of material composing a pylon. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Aluminum Masonry Steel			Concrete Metal Wood		Fibreglass No Information	Iron Other
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Tower Type	3	No Information	Enumeration	Unitless	0	The type of a tower based on its intended use(s).
allowed values:	<div> Drop Tower Lookout Tower Solar Power Tower </div> <div> Fire Tower No Information Telecommunication Tower </div> <div> Guard Tower Observation Tower </div> <div> Industrial Tower Other </div>					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

allowed values: No Information

Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
---------------------------------	---	----------------	--------	----------	----	---

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
-------	---	---------	------	-------	---	--

allowed values: -999999

Wireless Telecommunication Information : Wireless Telecommunication Type	1	No Information	Enumeration	Unitless	0	The type of a wireless telecommunication service based on the mechanism(s) of transmission and/or the nature of the communication(s) supported. [Description] For example, radio broadcast or mobile phone service.
--	---	----------------	-------------	----------	---	---

<u>allowed values:</u>	Cellular Phone	Loran	Microwave Radio Relay	Mobile Phone
	No Information	Other	Radar	Radio Broadcast
	Radio Telephone	Radio-telegraph	Television (TV)

Feature TrafficLight (Point 00)New ☐ Traffic Light

A set of automatic lights (usually red, amber, and green) for controlling road traffic, especially at a road intersection. [Description] Usually attached to tall poles or suspended from overhead cables.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<u>allowed values:</u>			Non-operational Planned			Not in Operation Temporarily Non-operational
						<i>Operational</i>

New

Feature Code	1	AQ160	CONSTRAINED_STRING	Unitless	5	Feature Code
--------------	---	-------	--------------------	----------	---	--------------

allowed values: AQ160

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
---	---	----------------	--------	----------	-----	---

allowed values: No Information

Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
----------------------------	---	---------	------	-------	---	---

allowed values: -999999

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
-------------------	---	---------	------	-------	---	---

allowed values: -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
allowed values: Damaged No Information Unmaintained Destroyed Ruined Dismantled Site Preparation Intact Under Construction						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values: Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM) Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM) Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM) Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)						
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
----------------------------	---	----------------	--------	----------	-------	---

[Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature TrafficSeparationScheme (Point 00)

New ☐ Traffic Separation Scheme

A maritime routing measure that separates opposing streams of traffic by appropriate means. [Description] For example, traffic lanes and traffic circles. Often referred to by its acronym, TSS.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<u>allowed values:</u> Civilian Other			International			National No Information
Direction of Flow	1	-999999	REAL	Arc Degree	0	The bearing of movement or direction of the flow.
<u>allowed values:</u> -999999						
New Feature Code	1	FC041	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> FC041						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
IMO Adopted	1	No Information	Boolean	Unitless	0	An indication that a Traffic Separation Scheme (TSS) has been adopted by the International Maritime Organization (IMO).
<u>allowed values:</u> False			No Information			True
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Maritime Navigation Marked	1	No Information	Boolean	Unitless	0	An indication that a feature is significant to maritime safety of navigation and is marked (for example: by a light or beacon) by a maritime-specific navigational aid. [Description] Mariners may also use other prominent features (for example: rotating aeronautical beacons or lighted structures) for informal navigational purposes.
<u>allowed values:</u> FALSE			No Information			TRUE

Maritime Traffic Separation Scheme Component	1	No Information	Enumeration	Unitless	0	The type of a component of a maritime Traffic Separation Scheme (TSS) based on its purpose. [Description] A TSS is a routing scheme whose intent is to reduce the risk of collision in congested and/or converging areas by separating traffic moving in opposite, or nearly opposite, directions.
allowed values:						Boundary Lane Part Outbound Lane Separation Zone Crossing Line Point Inbound Lane No Information Precautionary Area Inshore Traffic Zone Other Roundabout
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values:	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values:	U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
TSS-associated Aids to Navigation	1	No Information	String	Unitless	2E+09	A description of marked navigational aids that are either associated with or supporting a maritime Traffic Separation Scheme (TSS).
allowed values:	No Information					

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.

Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.	
<i>allowed values:</i>	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)		Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.	
<i>allowed values:</i> No Information							
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.	
<i>allowed values:</i> No Information							
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.	
<i>allowed values:</i> No Information							
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
<i>allowed values:</i> No Information							
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.	
<i>allowed values:</i> -999999							

Wireless Telecommunication Information : Wireless Telecommunication Type	1	No Information	Enumeration	Unitless	0	The type of a wireless telecommunication service based on the mechanism(s) of transmission and/or the nature of the communication(s) supported. [Description] For example, radio broadcast or mobile phone service.

Feature TrainingSite (Point 00)New ☐ Training Site**A site reserved for training.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
allowed values:	No Information					
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values:	-999999					
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
allowed values:	Civilian National Public		International No Information State			Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
allowed values:	No Information Partially Operational		Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	FA165	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values:	FA165					
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
allowed values:	CBRNE Civilian Support Emergency Operations Law Enforcement Public Order Sports Centre		Civil Intelligence Emergency Relief Services Meeting Place Rescue and Paramedical Services Vocational Education			Club Firefighting No Information Safety Defence Activities Government Other Shooting Range
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values:	No Information					
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
allowed values:	-999999					

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False			No Information		True	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<u>allowed values:</u> Damaged No Information Unmaintained			Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.	
<i>allowed values:</i>	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)		Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.	
<i>allowed values:</i> No Information							
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.	
<i>allowed values:</i> No Information							
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.	
<i>allowed values:</i> No Information							
Transportation Block Type	1	No Information	Enumeration	Unitless	0	The type of a transportation block based on its method of action. [Description] May be used as a means of subtyping Feature: 'Transportation Block'.	
<i>allowed values:</i> Drop Gate			No Information			Other	Rolling Block
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.	
<i>allowed values:</i> Canal Railway			No Information Road			Other Underground Railway	Pedestrian
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
<i>allowed values:</i> No Information							

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature TransportationStation (Area 00)

New ☐ Transportation Station

A station that serves as a stopping place along a transportation route. [Description] For example, used for the transfer of passengers and/or freight.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Attached Building	1	No Information	Boolean	Unitless	0	An indication that a building is physically contiguous (for example: shares a common wall) with one or more adjacent buildings.
<i>allowed values:</i> FALSE			No Information			TRUE
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AQ125	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AQ125						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Air Transport Inspection Pedestrian Transport Railway Transport Stop			Canal Transport Meeting Place Pipeline Transport Road Transport Transportation Hub			Emergency Operations No Information Postal Activities Security Services Warehousing and Storage Food Service Other Railway Passenger Transport Station Water Transport
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The type of designated hazard protection shelter based on the kind of emergency. [Description] These shelters may be inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
<i>allowed values:</i> Bomb Shelter Storm Shelter			Fallout Shelter			No Information Other

Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
<u>allowed values:</u> False			No Information			True
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
New Multi-unit Building	1	No Information	Boolean	Unitless	0	An indication that a building is divided into two or more distinct sets of rooms or other interior spaces that are internally fully-connected while being separated from each other and common areas by controlled access point(s) (for example: lockable doors) that enable physical privacy and security for its occupants.
<u>allowed values:</u> FALSE			No Information			TRUE
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<u>allowed values:</u> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

allowed values: AQ125						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
allowed values: Air Transport Inspection Pedestrian Transport Railway Transport Stop			Canal Transport Meeting Place Pipeline Transport Road Transport Transportation Hub			Emergency Operations No Information Postal Activities Security Services Warehousing and Storage Food Service Other Railway Passenger Transport Station Water Transport
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values: No Information						
New Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The type of designated hazard protection shelter based on the kind of emergency. [Description] These shelters may be inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
allowed values: Bomb Shelter Storm Shelter			Fallout Shelter			No Information Other

Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
<u>allowed values:</u> False			No Information			True
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
New Multi-unit Building	1	No Information	Boolean	Unitless	0	An indication that a building is divided into two or more distinct sets of rooms or other interior spaces that are internally fully-connected while being separated from each other and common areas by controlled access point(s) (for example: lockable doors) that enable physical privacy and security for its occupants.
<u>allowed values:</u> FALSE			No Information			TRUE
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<u>allowed values:</u> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

allowed values:	Aeronautical No Information Road		Automotive Other Taxi		Bus Pedestrian Truck	Canal Railway Underground Railway
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature TransRouteCharacterChange (Line 00)

New ☐ Transportation Route Characteristic Change

A section of a transportation route where its size (for example: narrowing or expansion in width) and/or operating speed is significantly different than in the adjacent sections of the route. [Description] For example, an increase or decrease in the number of lanes in a road. Constrictions along or beside a transportation route may impede the flow of vehicles or people thus resulting in 'choke points'.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Bypass Condition	1	No Information	Enumeration	Unitless	0	The ease or ability to circumvent a destroyed section of bridge, tunnel or pass within a distance of two kilometres from the feature. [Description] Bypass condition will not consider other bridges in bypass determination.
allowed values: Difficult			Easy			Impossible
allowed values: No Information						
New Feature Code	1	AQ059	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: AQ059						
Horizontal Clearance	1	-999999	REAL	Metre	0	The distance available to pass a load that extends laterally beyond the wheels of a vehicle.
allowed values: -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Route Width Expansion Type	1	No Information	Enumeration	Unitless	0	The type of a route width expansion based on the nature of the expansion and/or surrounding area.
allowed values:						
Increased Track or Lane Count						No Information
Roadside Rest Area						Shoulder
						Other
						Siding
						Railway Sidetrack
Safe Horizontal Clearance	1	-999999	REAL	Metre	0	Minimum safe horizontal distance between adjacent structures on either side of a navigable channel.
allowed values:						-999999

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Traffic Restriction Type	1	No Information	Enumeration	Unitless	0	The reason for traffic restriction based on the nature of the route.
<i>allowed values:</i> No Information Road Interchange			Other Sharp Curves			Railway Switch Steep Grades Reduced Track or Lane Count
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> Canal Pedestrian			Inland Waterway Railway			No Information Road Other
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Feature TransRouteProtectStruct (Area 00)

New ☐ Transportation Route Protection Structure

A structure built over and/or along a transportation route designed to prevent damage to, or blockage of, the route from rock slides, snow slides and/or weather phenomena. [Description] For example, a snow shed, a rock shed or a gallery. These structures are usually located in rugged mountainous regions.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AL211	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL211						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.			
<i>allowed values:</i> -999999									
Horizontal Clearance	1	-999999	REAL	Metre	0	The distance available to pass a load that extends laterally beyond the wheels of a vehicle.			
<i>allowed values:</i> -999999									
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.			
<i>allowed values:</i> -999999									
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.			
<i>allowed values:</i> No Information									
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.			
<i>allowed values:</i> FalseNo InformationTrue									
Overhead Clearance	1	-999999	REAL	Metre	0	The least distance between the travelled way and any obstruction vertically above it. [Description] Reference STANAG 2253.			
<i>allowed values:</i> -999999									
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.

If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.

<i>allowed values:</i> <i>False</i>			No Information		<i>True</i>	
Overhead Clearance	1	-999999	REAL	Metre	0	The least distance between the travelled way and any obstruction vertically above it. [Description] Reference STANAG 2253.
<i>allowed values:</i> <i>-999999</i>						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> <i>Damaged</i> <i>No Information</i> <i>Unmaintained</i>			<i>Destroyed</i> <i>Ruined</i>		<i>Dismantled</i> <i>Site Preparation</i>	<i>Intact</i> <i>Under Construction</i>
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> <i>U</i>						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

<i>allowed values:</i>	<div> Canal Road </div> <div> <i>No Information</i> </div> <div> <i>Other</i> </div> <div> Railway </div>					

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Tree (Point 00)

New ☐ Tree

An individual woody perennial plant, typically having a single stem or trunk growing to a considerable height and bearing lateral branches at some distance from the ground.
[Description] May be distinguished by its relative isolation from other features, thus serving as a landmark.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
New Feature Code	1	EC005	CONSTRAINED_ STRING	Unitless	5	Feature Code
<u>allowed values:</u> EC005						
Foliage Type	1	No Information	Enumeration	Unitless	0	The predominant foliage type of the vegetation.
<u>allowed values:</u> Deciduous Other			Evergreen			Mixed No Information
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Isolated	1	No Information	Boolean	Unitless	0	An indication that a feature (for example: a structure) is in the open by itself, isolated from other features of a similar type, and thus is visually distinct from surrounding features when viewed from a distance.
<u>allowed values:</u> FALSE			No Information			TRUE

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False			No Information		True

Feature Tunnel (Area 00)New ☐ Tunnel

An underground passage that is open at both ends and usually contains a land transportation route (for example: a road and/or a railway). [Description] Commonly used to pass through a hill or mountain, or under a river or road. May also provide underground passage in a mine.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Bypass Condition	1	No Information	Enumeration	Unitless	0	The ease or ability to circumvent a destroyed section of bridge, tunnel or pass within a distance of two kilometres from the feature. [Description] Bypass condition will not consider other bridges in bypass determination.
<i>allowed values:</i> Difficult			Easy			Impossible No Information
Deck Count	1	-999999	REAL	Unitless	0	The number of vertically stacked decks, one over another, in a transportation structure (for example: a bridge or a tunnel).
<i>allowed values:</i> -999999						
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information			Non-operational			Not in Operation Operational
<i>Partially Operational</i>			Planned			Temporarily Non-operational
New Feature Code	1	AQ130	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AQ130						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The type of designated hazard protection shelter based on the kind of emergency. [Description] These shelters may be inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
<i>allowed values:</i> Bomb Shelter			Fallout Shelter			No Information Other
<i>Storm Shelter</i>						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i> Accurate			Approximate			Doubtful No Information
Horizontal Clearance	1	-999999	REAL	Metre	0	The distance available to pass a load that extends laterally beyond the wheels of a vehicle.

<u>allowed values:</u> -999999						
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<u>allowed values:</u> -999999						
New Least Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Overhead Clearance	1	-999999	REAL	Metre	0	The least distance between the travelled way and any obstruction vertically above it. [Description] Reference STANAG 2253.
<u>allowed values:</u> -999999						
Pedestrian Traversable	1	No Information	Boolean	Unitless	0	An indication that a feature is traversable on foot.
<u>allowed values:</u> False						
<u>allowed values:</u> No Information						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<u>allowed values:</u> Damaged						
<u>allowed values:</u> No Information						
<u>allowed values:</u> Unmaintained						
<u>allowed values:</u> Destroyed						
<u>allowed values:</u> Ruined						
<u>allowed values:</u> Dismantled						
<u>allowed values:</u> Site Preparation						
<u>allowed values:</u> Intact						
<u>allowed values:</u> Under Construction						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.	
allowed values:	No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.	
allowed values:	No Information						
Route Pavement Information : Route Minimum Travelled Way Width	1	-999999	REAL	Metre	0	The minimum width of the travelled way of a route. [Description] Excludes pavements and shoulders.	
allowed values:	-999999						
Route Total Usable Width	1	-999999	REAL	Metre	0	The total usable width of the travelled way of a route. [Description] Includes pavements and shoulders.	
allowed values:	-999999						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.	
allowed values:	No Information						
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.	
allowed values:	Aqueduct No Transportation System Railway		Canal Other Road			Inland Waterway Pedestrian Taxiway	No Information Portage
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
allowed values:	No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.	
allowed values:	-999999

Feature Tunnel (Line 00)New ☐ Tunnel

An underground passage that is open at both ends and usually contains a land transportation route (for example: a road and/or a railway). [Description] Commonly used to pass through a hill or mountain, or under a river or road. May also provide underground passage in a mine.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Bypass Condition	1	No Information	Enumeration	Unitless	0	The ease or ability to circumvent a destroyed section of bridge, tunnel or pass within a distance of two kilometres from the feature. [Description] Bypass condition will not consider other bridges in bypass determination.
<i>allowed values:</i> Difficult			Easy			Impossible No Information
Deck Count	1	-999999	REAL	Unitless	0	The number of vertically stacked decks, one over another, in a transportation structure (for example: a bridge or a tunnel).
<i>allowed values:</i> -999999						
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AQ130	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AQ130						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The type of designated hazard protection shelter based on the kind of emergency. [Description] These shelters may be inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
<i>allowed values:</i> Bomb Shelter Storm Shelter			Fallout Shelter			No Information Other
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i> Accurate			Approximate			Doubtful No Information
Horizontal Clearance	1	-999999	REAL	Metre	0	The distance available to pass a load that extends laterally beyond the wheels of a vehicle.
<i>allowed values:</i> -999999						

	Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
	<i>allowed values:</i> -999999						
New	Least Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling.
	<i>allowed values:</i> -999999						
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information

Feature TunnelMouth (Point 00)New ☐ Tunnel Mouth

The opening of a tunnel into a larger space (for example: onto the terrain surface). [Description] A tunnel is usually open to the terrain surface at both ends, but may sometimes lead to an enclosed space, for example: leading to an underground bunker, into an underground mine (termed an 'adit') or into an underground railway station.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
-----------	-------------	---------	-----------	-------	--------	----------------------

Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.

<hr/>							
Unique Entity Identifier		1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Feature UndergroundBunker (Area 00)

New ☐ Underground Bunker

A reinforced underground shelter. [Description] May be located within a mountain or buried below the terrain. Often used as an underground facility for military command, control, and/or troop billeting.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AH060	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AH060						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The type of designated hazard protection shelter based on the kind of emergency. [Description] These shelters may be inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
<i>allowed values:</i> Bomb Shelter Storm Shelter			Fallout Shelter			No Information Other
New Least Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Military Service Branch	1	No Information	Enumeration	Unitless	0	The branch of the armed forces of a nation. [Description] May also be applied to similar organizations following military discipline (for example: a coastguard).
<i>allowed values:</i> Air Force Marines			Army Navy			Coastguard No Information Joint Other
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Permanent	1	No Information	Boolean	Unitless	0	An indication that a feature is permanent. [Description] Temporary features last, or are meant to last, for a limited time only.

allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature UtilityCover (Point 00)

New ☐ Utility Cover

A removable cover or plate which provides access to underground utility tunnels, distribution lines, or drainage systems. [Description] For example, a manhole cover.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Accessible Utility Type	3	No Information	Enumeration	Unitless	0	The type(s) of utility that can be accessed through a utility cover.
allowed values:			Cable Television Heating Fluid Circulation Sewage Telephone			Cooling Fluid Circulation Natural Gas Distribution Storm Sewer Traffic Light Digital Fibre-optic System No Information Street Light Water Distribution Electric Power Distribution Other Telegraph
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values:			-999999			
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
allowed values:			No Information Partially Operational			Non-operational Planned Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AQ115	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values:			AQ115			
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values:			No Information			
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
allowed values:			Accurate			Approximate Doubtful No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values:			-999999			
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values:			No Information			
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values:			No Information			
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
allowed values:			Damaged No Information Unmaintained			Destroyed Ruined Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values:			U			
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature VanishingPoint (Point 00)

New ☐ Vanishing Point

The location at which a watercourse disappears into the terrain.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<u>allowed values:</u> -999999						
Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> [-999999, -999999]			No Information			
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<u>allowed values:</u> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<u>allowed values:</u> -999999						
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<u>allowed values:</u> -999999						
Direction of Flow	1	-999999	REAL	Arc Degree	0	The bearing of movement or direction of the flow.
<u>allowed values:</u> -999999

<u>allowed values:</u> BH145						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<u>allowed values:</u> Conventional Other			Historical Transliterated Provisional			Native Transliterated Unverified Transliterated No Information Variant Transliterated
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
New Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						

New	Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<u>allowed values:</u> -999999						
	Predominant Average Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average water velocity, exclusive of high water due to runoff or low water due to drought.
	<u>allowed values:</u> [-999999, -999999]			No Information			
	Predominant Maximum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<u>allowed values:</u> [-999999, -999999]			No Information			
	Predominant Maximum Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.
	<u>allowed values:</u> [-999999, -999999]						
	Predominant Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<u>allowed values:</u> [-999999, -999999]			No Information			
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<u>allowed values:</u> U						
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

	<u>allowed values:</u> No Information						

New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
	<i>allowed values:</i>	-999999					
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
	<i>allowed values:</i>	-999999					
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.
	<i>allowed values:</i>	-999999					
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units		The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<i>allowed values:</i>	-999999					
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<i>allowed values:</i>	No Information					
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime		The electrical conductivity of water.
	<i>allowed values:</i>	-999999					
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre		The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i>	-999999					
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless		The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i>	Contaminated Potable		No Information Treatable		Nonpotable	Other
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.
	<i>allowed values:</i>	Alkaline Mineral Saline		Brackish No Information Seawater		Brine Not Applicable	Fresh Other
	Watercourse Sink Type	1	No Information	Enumeration	Unitless	0	The type of the sink of a watercourse.
	<i>allowed values:</i>	Disappearing Other		Dissipating Sinkhole		Hole	No Information
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
	<i>allowed values:</i>	-999999

Feature VehicleBarrier (Line 00)New ☐ Vehicle Barrier

A obstruction placed across a transportation route (for example: a road, a railway, a tunnel, or a bridge) to prevent the passage of vehicles.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AP041	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AP041						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.

allowed values:	<i>Damaged</i> No Information <i>Unmaintained</i>			<i>Destroyed</i> <i>Ruined</i>		<i>Dismantled</i> <i>Site Preparation</i>		<i>Intact</i> <i>Under Construction</i>
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.		
allowed values:	<i>U</i>							
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.		
allowed values:	<i>No Information</i>							
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.		
allowed values:	Concrete <i>Other</i> Wood		Masonry Prestressed Concrete		Metal Reinforced Concrete		<i>No Information</i> Soil	
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.		
allowed values:	<i>No Information</i> Underground Railway		<i>Other</i>		Railway		Road	
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.		
allowed values:	<i>No Information</i>							

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature VehicleBarrier (Point 00)

New ☐ Vehicle Barrier

A obstruction placed across a transportation route (for example: a road, a railway, a tunnel, or a bridge) to prevent the passage of vehicles.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AP041	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AP041						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999						
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999						
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999						
	Lifting Capacity	1	-999999	REAL	Tonne	0	The maximum weight that can be safely raised by a lifting device (for example: a crane).
	<u>allowed values:</u> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information			True
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<u>allowed values:</u> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<u>allowed values:</u> U						
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

------------------------	--	---	--	---

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature VoidCollectionArea (Area 00)

New ☐ Void Collection Area

A data collection region lacking suitable source coverage and/or where data is not required.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.

allowed values: -999999

New Feature Code	1	ZD020	CONSTRAINED_STRING	Unitless	5	Feature Code
------------------	---	-------	--------------------	----------	---	--------------

allowed values: ZD020

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
--------	---	---------	------	-------	---	--

allowed values: -999999

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
-------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
---	---	---	--------	----------	---	--

allowed values: U

Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature VolcanicDyke (Line 00)New ☐ Volcanic Dyke

A sheet of rock filling a fissure that sometimes shows as a terrain ridge. [Description] Especially a mass of igneous rock that has intruded upwards through strata.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Feature Code	1	DB190	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> DB190						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						

Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Surface Slope	1	[-999999, -999999]	REAL_Interval	Percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.

The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values: False			No Information			True
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Volcanic Activity	1	No Information	Enumeration	Unitless	0	The current level of activity of a volcano.
allowed values: Active			Dormant			Inactive or Extinct
Volcano Shape	1	No Information	Enumeration	Unitless	0	The classification by shape of a volcano.
allowed values: Caldera			Cinder Cone			Composite
No Information			Shield			Cone

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature WaterAerodrome (Area 00)

New ☐ Water Aerodrome

An aerodrome intended to be used either wholly or in part for the arrival, departure and surface movement of aircraft on water.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aerodrome Elevation	1	-999999	REAL	Metre	0	The vertical distance above Mean Sea Level (MSL) of the highest point of the landing area. <i>allowed values:</i> -999999
Aerodrome Official Name	1	No Information	String	Unitless	80	The primary official name of an aerodrome as designated by an appropriate authority. <i>allowed values:</i> No Information
Airfield Symbol Type	1	No Information	Enumeration	Unitless	0	The type of airfield symbol designation. <i>allowed values:</i> A - Active Civilian E - Abandoned or Closed (with usable runways or landing areas) B - Active Joint (Civilian/Military) G - Unusable for landing or take-off C - Active Military No Information D - Active (with less than the minimum facilities) X - Decoy
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature. <i>allowed values:</i> -999999
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public). <i>allowed values:</i> Civilian National Public International No Information State Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a facility, as a whole. <i>allowed values:</i> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational
New Feature Code	1	GB065	CONSTRAINED_STRING	Unitless	5	Feature Code <i>allowed values:</i> GB065
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end. <i>allowed values:</i> No Information
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof. <i>allowed values:</i> -999999
ICAO Location Indicator	1	No Information	String	Unitless	14	The identifier that is assigned to a location in accordance with rules prescribed by the International Civil Aviation Organization (ICAO) in Document 7910. [Description] If available this indicator shall be used as primary for identification. <i>allowed values:</i> No Information
Installation Operator	1	No Information	String	Unitless	2E+09	The name of the company or authority operating an installation. <i>allowed values:</i> No Information
New Largest Aircraft	1	No Information	String	Unitless	254	The largest aircraft that has used the facility within the past five years. <i>allowed values:</i> No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter. <i>allowed values:</i> -999999

Magnetic Variation	1	-999999	Real	Arc Degree	0	The angular difference between True North and Magnetic North measured at a given position and date. [Description] The value given indicates whether the angular difference is East (positive) or West (negative) of True North. True North is the direction of the northern point at which the geographic meridian lines meet.
<i>allowed values:</i> -999999						
Magnetic Variation Date	1	No Information	Constrained_String	Unitless	20	The date on which the magnetic variation was measured.
<i>allowed values:</i> No Information						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> <div>Damaged</div> <div>No Information</div> <div>Unmaintained</div> <div>Destroyed</div> <div>Ruined</div> <div>Dismantled</div> <div>Site Preparation</div> <div>Intact</div> <div>Under Construction</div>						
Port of Entry	1	No Information	Boolean	Unitless	0	An indication that a facility is a port of entry for customs and immigration purposes.
<i>allowed values:</i> <div>False</div> <div>No Information</div> <div>True</div>						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<i>allowed values:</i> <div>Army Geographic Agency (Netherlands)</div> <div>Defence Acquisition and Logistics Organization (Denmark)</div> <div>General Command of Mapping (Turkey)</div> <div>Geospatial Intelligence Organisation (New Zealand)</div> <div>Mapping Service (Hungary)</div> <div>Military Mapping Centre (Lithuania)</div> <div>No Information</div> <div>Topographic Service (Finland)</div> <div>U.S. Army Geospatial Center (AGC)</div> <div>U.S. Defense Intelligence Agency (DIA)</div> <div>U.S. European Command (USEUCOM)</div> <div>U.S. Marine Corps</div> <div>U.S. National Reconnaissance Office (NRO)</div> <div>U.S. Pacific Command (PACOM)</div> <div>U.S. Transportation Command (USTRANSCOM)</div> <div>Army Geographic Centre (Spain)</div> <div>Defence Geographic Centre Intelligence Collection Group (United Kingdom)</div> <div>Geographic Service (Belgium)</div> <div>Hellenic Military Geographic Service (Greece)</div> <div>Military Geographic Group (Estonia)</div> <div>Military Topographic Directorate (Romania)</div> <div>Other</div> <div>U.S. Africa Command (USAFRICOM)</div> <div>U.S. Central Command (USCENTCOM)</div> <div>U.S. Department of Energy (DOE)</div> <div>U.S. Federal Bureau of Investigation (FBI)</div> <div>U.S. National Civil Applications Program (NCAP)</div> <div>U.S. National Security Agency (NSA)</div> <div>U.S. Southern Command (USSOUTHCOM)</div> <div>Army Geographic Institute (Portugal)</div> <div>Defence Imagery and Geospatial Organisation (Australia)</div> <div>Geographic Service of the Czech Armed Forces (Czech Republic)</div> <div>Joint Geography Bureau (France)</div> <div>Military Geographic Service (Norway)</div> <div>Military Topographic Service (Bulgaria)</div> <div>Swedish Armed Forces (Sweden)</div> <div>U.S. Air Force</div> <div>U.S. Central Intelligence Agency (CIA)</div> <div>U.S. Department of Homeland Security (DHS)</div> <div>U.S. Geological Survey (USGS)</div> <div>U.S. National Geospatial-Intelligence Agency (NGA)</div> <div>U.S. Navy</div> <div>U.S. Special Operations Command (USSOCOM)</div> <div>Bundeswehr Geoinformation Office (Germany)</div> <div>Defense Information Security (Italy)</div> <div>Geospatial Information Agency (Latvia)</div> <div>Mapping and Charting Establishment (Canada)</div> <div>Military Geography Division (Poland)</div> <div>National Army Topographic Service (Moldova)</div> <div>Topographic Institute (Slovakia)</div> <div>U.S. Army</div> <div>U.S. Coast Guard</div> <div>U.S. Department of State</div> <div>U.S. Joint Forces Command (USJFCOM)</div> <div>U.S. National Oceanic and Atmospheric Administration</div> <div>U.S. Northern Command (USNORTHCOM)</div> <div>U.S. Strategic Command (USSTRATCOM)</div>						
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature WaterAerodrome (Point 00) New ☐ Water Aerodrome

An aerodrome intended to be used either wholly or in part for the arrival, departure and surface movement of aircraft on water.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aerodrome Elevation	1	-999999	REAL	Metre	0	The vertical distance above Mean Sea Level (MSL) of the highest point of the landing area.
<i>allowed values:</i> -999999						
Aerodrome Official Name	1	No Information	String	Unitless	80	The primary official name of an aerodrome as designated by an appropriate authority.
<i>allowed values:</i> No Information						
Airfield Symbol Type	1	No Information	Enumeration	Unitless	0	The type of airfield symbol designation.
<i>allowed values:</i> A - Active Civilian E - Abandoned or Closed (with usable runways or landing areas)			B - Active Joint (Civilian/Military) G - Unusable for landing or take-off			C - Active Military No Information D - Active (with less than the minimum facilities) X - Decoy
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational

New	Feature Code	1	GB065	CONSTRAINED_STRING	Unitless	5	Feature Code
	<u>allowed values:</u> GB065						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999						
	ICAO Location Indicator	1	No Information	String	Unitless	14	The identifier that is assigned to a location in accordance with rules prescribed by the International Civil Aviation Organization (ICAO) in Document 7910. [Description] If available this indicator shall be used as primary for identification.
	<u>allowed values:</u> No Information						
	Installation Operator	1	No Information	String	Unitless	2E+09	The name of the company or authority operating an installation.
	<u>allowed values:</u> No Information						
New	Largest Aircraft	1	No Information	String	Unitless	254	The largest aircraft that has used the facility within the past five years.
	<u>allowed values:</u> No Information						
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999						
	Magnetic Variation	1	-999999	Real	Arc Degree	0	The angular difference between True North and Magnetic North measured at a given position and date. [Description] The value given indicates whether the angular difference is East (positive) or West (negative) of True North. True North is the direction of the northern point at which the geographic meridian lines meet.
	<u>allowed values:</u> -999999						
	Magnetic Variation Date	1	No Information	Constrained_String	Unitless	20	The date on which the magnetic variation was measured.
	<u>allowed values:</u> No Information						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information

Feature WaterbodyDivider (Area 00)New ☐ Waterbody Divider

An artificial structure subdividing a waterbody. [Description] May consist of an artificial earthen embankment subdividing a pond or rice paddy, or an artificial partition (constructed, for example, from concrete or steel) subdividing a fish hatchery tank or water treatment plant aeration tank.

<u>allowed values:</u> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<u>allowed values:</u> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<u>allowed values:</u> No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i>	<i>-999999</i>					
Hydrologic Persistence	1	No Information	Enumeration	Unitless		The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i>	Dry Perennial		<i>Ephemeral</i>			Intermittent No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i>	<i>-999999</i>					
New Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i>	<i>-999999</i>					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i>	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i>	No Information					
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i>	<i>False</i>		No Information			<i>True</i>
New Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i>	<i>-999999</i>					
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i>	Damaged No Information Unmaintained		Destroyed Ruined			Dismantled Site Preparation <i>Intact</i> <i>Under Construction</i>

Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
New Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
allowed values: -999999						
New Water Resource Information : Temperature	1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
allowed values: -999999						
New Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.
allowed values: -999999						
New Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units		The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
allowed values: -999999						

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Aluminum Masonry Prestressed Concrete						
Brick Metal Reinforced Concrete						
Concrete No Information Steel						
Iron Other Treated Timber						
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
<i>allowed values:</i> No Information						
New Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime		The electrical conductivity of water.
<i>allowed values:</i> -999999						
New Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre		The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
<i>allowed values:</i> -999999						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless		The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable						
No Information Treatable						
Nonpotable						
Other						
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline						
Brackish No Information Seawater						
Brine Not Applicable						
Fresh Other						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999

Feature WaterIntakeTower (Point 00)

New ☐ Water Intake Tower

A tower-like structure associated with a dam or water source and used for the intake of water.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.

	<u>allowed values:</u> <i>False</i>		No Information		<i>True</i>		
	Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
	<u>allowed values:</u> <i>-999999</i>						
New	Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
	<u>allowed values:</u> <i>-999999</i>						
New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<u>allowed values:</u> <i>-999999</i>						
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<u>allowed values:</u> <i>-999999</i>						
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<u>allowed values:</u> <i>-999999</i>						
	Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
	<u>allowed values:</u> No Information <i>Partially Operational</i>			Non-operational Planned		Not in Operation Temporarily Non-operational	<i>Operational</i>
New	Feature Code	1	BI050	CONSTRAINED_STRING	Unitless	5	Feature Code
	<u>allowed values:</u> <i>BI050</i>						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> <i>-999999</i>						
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> <i>-999999</i>						
	Hydrologic Persistence	1	No Information	Enumeration	Unitless		The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<u>allowed values:</u> Dry Perennial			<i>Ephemeral</i>		Intermittent	No Information
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> <i>-999999</i>						
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<u>allowed values:</u> <i>-999999</i>						

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999

Feature WaterMill (Area 00)

New ☐ Water Mill

A structure that uses a water wheel or turbine to drive a mechanical process (for example: grinding grain into flour, cutting timber into lumber, or stripping bark from trees for use in tanning). [Description] A watermill that only generates electricity is more usually termed a 'hydroelectric plant'.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.

[Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Manufacturing Information : Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Coffee No Information Sugar			Cotton No Product			Lumber Olive Oil Milled Grain Other
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
allowed values:	No Information					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
allowed values:	-999999

Feature WaterMill (Point 00)

New ☐ Water Mill

A structure that uses a water wheel or turbine to drive a mechanical process (for example: grinding grain into flour, cutting timber into lumber, or stripping bark from trees for use in tanning). [Description] A watermill that only generates electricity is more usually termed a 'hydroelectric plant'.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National State			International No Information			Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AJ055	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AJ055						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Grain Milling Power Generation			No Information Pumping			Oil-mill Sawmilling Other
Floor Count	1	-999999	REAL	Unitless	0	The number of floors in a structure (for example: a building).
<i>allowed values:</i> -999999						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<u>allowed values:</u> Accurate			Approximate			Doubtful
<u>allowed values:</u> No Information						No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.

allowed values: No Information						
Tidal Current Direction	1	-999999	REAL	Arc Degree	0	The tidal current direction at the time of the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level.
allowed values: -999999						
Tidal Current Direction 1 Hour After	1	-999999	REAL	Arc Degree	0	The tidal current direction 1 hour after the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
allowed values: -999999						
Tidal Current Direction 1 Hour Before	1	-999999	REAL	Arc Degree	0	The tidal current direction 1 hour before the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
allowed values: -999999						
Tidal Current Direction 2 Hours After	1	-999999	REAL	Arc Degree	0	The tidal current direction 2 hours after the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
allowed values: -999999						
Tidal Current Direction 2 Hours Before	1	-999999	REAL	Arc Degree	0	The tidal current direction 2 hours before the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
allowed values: -999999						
Tidal Current Direction 3 Hours After	1	-999999	REAL	Arc Degree	0	The tidal current direction 3 hours after the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
allowed values: -999999						
Tidal Current Direction 3 Hours Before	1	-999999	REAL	Arc Degree	0	The tidal current direction 3 hours before the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
allowed values: -999999						
Tidal Current Direction 4 Hours After	1	-999999	REAL	Arc Degree	0	The tidal current direction 4 hours after the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
allowed values: -999999						
Tidal Current Direction 4 Hours Before	1	-999999	REAL	Arc Degree	0	The tidal current direction 4 hours before the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
allowed values: -999999						

Tidal Current Direction 5 Hours After	1	-999999	REAL	Arc Degree	0	The tidal current direction 5 hours after the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
<u>allowed values:</u> -999999						
Tidal Current Direction 5 Hours Before	1	-999999	REAL	Arc Degree	0	The tidal current direction 5 hours before the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
<u>allowed values:</u> -999999						
Tidal Current Direction 6 Hours After	1	-999999	REAL	Arc Degree	0	The tidal current direction 6 hours after the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
<u>allowed values:</u> -999999						
Tidal Current Speed	1	-999999	REAL	Knot	0	The tidal current speed at the time of the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level.
<u>allowed values:</u> -999999						
Tidal Current Speed 1 Hour After	1	-999999	REAL	Knot	0	The tidal current speed 1 hour after the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
<u>allowed values:</u> -999999						
Tidal Current Speed 1 Hour Before	1	-999999	REAL	Knot	0	The tidal current speed 1 hour before the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
<u>allowed values:</u> -999999						
Tidal Current Speed 2 Hours After	1	-999999	REAL	Knot	0	The tidal current speed 2 hours after the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
<u>allowed values:</u> -999999						
Tidal Current Speed 2 Hours Before	1	-999999	REAL	Knot	0	The tidal current speed 2 hours before the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
<u>allowed values:</u> -999999						
Tidal Current Speed 3 Hours After	1	-999999	REAL	Knot	0	The tidal current speed 3 hours after the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
<u>allowed values:</u> -999999						
Tidal Current Speed 3 Hours Before	1	-999999	REAL	Knot	0	The tidal current speed 3 hours before the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
<u>allowed values:</u> -999999						
Tidal Current Speed 4 Hours After	1	-999999	REAL	Knot	0	The tidal current speed 4 hours after the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
<u>allowed values:</u> -999999						
Tidal Current Speed 4 Hours Before	1	-999999	REAL	Knot	0	The tidal current speed 4 hours before the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
<u>allowed values:</u> -999999						
Tidal Current Speed 5 Hours After	1	-999999	REAL	Knot	0	The tidal current speed 5 hours after the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
<u>allowed values:</u> -999999						
Tidal Current Speed 5 Hours Before	1	-999999	REAL	Knot	0	The tidal current speed 5 hours before the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
<u>allowed values:</u> -999999						
Tidal Current Speed 6 Hours After	1	-999999	REAL	Knot	0	The tidal current speed 6 hours after the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
<u>allowed values:</u> -999999						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<u>allowed values:</u> No Information						
Hydrographic Depth : Sounding Metadata : Vessel Draft Correction	1	No Information	Boolean	Unitless	0	An indication that a vessel draft correction has been applied.
<u>allowed values:</u> False No Information True

Feature WaterRace (Line 00)New ☐ Water Race

An artificial channel for a current of water, especially one built to provide water for industrial or agricultural purposes or for transporting water-borne materials. [Description] For example, a sluice, a flume, or a tailrace.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999						
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	BH065	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BH065						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Hydrologic Persistence	1	No Information	Enumeration	Unitless		The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry Perennial			<i>Ephemeral</i>			Intermittent No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

	<u>allowed values:</u> -999999						
	Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
	<u>allowed values:</u> False			No Information			True
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<u>allowed values:</u> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information			True
New	Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<u>allowed values:</u> -999999						
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<u>allowed values:</u> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
	Relative Level	1	No Information	Enumeration	Unitless		The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).
	<u>allowed values:</u> Depressed Raised			Level			No Information Not Applicable
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<u>allowed values:</u> U						
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
	<u>allowed values:</u> Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)		Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.

<u>allowed values:</u> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<u>allowed values:</u> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<u>allowed values:</u> No Information						
New Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
<u>allowed values:</u> -999999						
Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
<u>allowed values:</u> False			No Information		True	
New Water Resource Information : Temperature	1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<u>allowed values:</u> -999999						
New Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.
<u>allowed values:</u> -999999						
New Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units		The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<u>allowed values:</u> -999999						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<u>allowed values:</u> No Information						
Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
<u>allowed values:</u> Above Surface			Below Ground Surface		No Information	
New Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime		The electrical conductivity of water.
<u>allowed values:</u> -999999						
New Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre		The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
<u>allowed values:</u> -999999						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless		The potability of water based on the type of treatment required before it is safe for human consumption.
<u>allowed values:</u> Contaminated Potable			No Information Treatable		Nonpotable	
					Other	
Water Race Type	1	No Information	Enumeration	Unitless	0	The type of a water race based on its structure and/or intended purpose.
<u>allowed values:</u> Flume Tailrace			Headrace		No Information	
					Sluice	
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.

New	allowed values:	Alkaline Mineral Saline		Brackish No Information Seawater		Brine Not Applicable		Fresh Other
	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.		
	allowed values:	Agricultural Irrigation Institutional Other		Commercial Livestock Power Generation		Domestic Irrigation Municipal Recreational		Industrial No Information Sanitary Domestic
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.	
	allowed values:	-999999

Feature WaterTower (Area 00)

New ☐ **Water Tower**

A tower supporting an elevated storage tank of water.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
allowed values:			No Information			True
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values:						-999999
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
allowed values:						-999999
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
allowed values:						-999999
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
allowed values:						-999999
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
allowed values:			Civilian National Public			International No Information State
						Joint Military and Civilian Other
						Military Private
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN ⁻ . These are powerful poisons that are toxic to humans and aquatic life.

<u>allowed values:</u> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<u>allowed values:</u> No Information Partially Operational						
New Feature Code	1	AM080	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> AM080						
Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Geographic Name Type	2	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<u>allowed values:</u> Conventional Other						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<u>allowed values:</u> Ephemeral						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
New Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<u>allowed values:</u> -999999						
Margin Number	1	-999999	Integer	Unitless		The numeric identifier used to relate a feature instance to additional information about that feature instance that may be presented along the margin (outside the neat line) of a map or chart sheet on which that feature instance is portrayed. [Description] The scope of uniqueness may only be within the map or chart sheet.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False						
No Information						
True						

New	Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<u>allowed values:</u> -999999						
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<u>allowed values:</u> Damaged No Information Unmaintained			Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<u>allowed values:</u> U						
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
	<u>allowed values:</u> Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)		Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
	<u>allowed values:</u> No Information						
	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
	<u>allowed values:</u> No Information						
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
	<u>allowed values:</u> No Information						
	Structure Shape	1	No Information	Enumeration	Unitless	0	The geometric form, appearance, and/or configuration of the feature as a whole.
	<u>allowed values:</u> Cylindrical on Tower No Information			Cylindrical with Conical Top Other		Cylindrical with Domed Top Spherical	Cylindrical with Flat Top Spherical on Column
New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
	<u>allowed values:</u> -999999						

	Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
	<i>allowed values:</i> False			No Information			True
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<i>allowed values:</i> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<i>allowed values:</i> No Information						
	Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
	<i>allowed values:</i> No Information						
	Volume	1	-999999	REAL	Cubic Metre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i> -999999						
	Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i> Contaminated Potable			No Information Treatable			Nonpotable Other
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
	<i>allowed values:</i> Alkaline No Information			Brackish Other			Fresh Saline Mineral
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
	<i>allowed values:</i> Agricultural Irrigation Institutional Other			Commercial Livestock Power Generation			Domestic Irrigation Municipal Recreational Industrial No Information Sanitary Domestic
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> <i>False</i>			<i>No Information</i>			<i>True</i>
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International <i>No Information</i> State			Joint Military and Civilian <i>Other</i> Military Private
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> <i>No Information</i> <i>Partially Operational</i>			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AM080	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> <i>AM080</i>						
Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> <i>No Information</i>						
Geographic Name Type	2	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional <i>Other</i>			Historical Transliterated Provisional			Native Transliterated Unverified Transliterated <i>No Information</i> Variant Transliterated

	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999						
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999						
	Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<i>allowed values:</i> <i>Ephemeral</i>			Intermittent			No Information Perennial
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<i>allowed values:</i> -999999						
	Margin Number	1	-999999	Integer	Unitless		The numeric identifier used to relate a feature instance to additional information about that feature instance that may be presented along the margin (outside the neat line) of a map or chart sheet on which that feature instance is portrayed. [Description] The scope of uniqueness may only be within the map or chart sheet.
	<i>allowed values:</i> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
New	Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<i>allowed values:</i> -999999						
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<i>allowed values:</i> <i>Damaged</i> No Information <i>Unmaintained</i>			<i>Destroyed</i> <i>Ruined</i>			<i>Dismantled</i> <i>Site Preparation</i> <i>Intact</i> <i>Under Construction</i>
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<i>allowed values:</i> <i>U</i>						
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature WaterTreatmentBed (Area 00)

New ☐ Water Treatment Bed

A tract for the treatment of water that consists of a bed of material where water is aerated or filtered.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999, -999999]			No Information			
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999						
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999						
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	BH040	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BH040						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
New Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<i>allowed values:</i>						
Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)		Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						

New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
	<u>allowed values:</u>	-999999					
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
	<u>allowed values:</u>	-999999					
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.
	<u>allowed values:</u>	-999999					
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units		The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<u>allowed values:</u>	-999999					
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<u>allowed values:</u>	No Information					
	Volume	1	-999999	REAL	Cubic Metre		The volume of a feature. [Description] For example, the storage capacity of a water tower.
	<u>allowed values:</u>	-999999					
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime		The electrical conductivity of water.
	<u>allowed values:</u>	-999999					
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre		The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<u>allowed values:</u>	-999999					
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.
	<u>allowed values:</u>	Alkaline Mineral Saline		Brackish No Information Seawater		Brine Not Applicable Fresh Other	
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
----------------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Feature WaterWell (Area 00)New ☐ Water Well

A shaft sunk into the ground to reach and tap a supply of water intended for uses other than power generation, heating or the extraction of minerals. [Description] May be, for example, drilled to tap deep underground reservoirs or dug to reach a shallow water table. Dug wells are typically circular, lined with masonry, have a stone border and a structure built above then for lowering and raising a bucket.

	Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
New	Water Resource Information : Aquifer Name	1	No Information	String	Unitless	254	The common or scientific name of an aquifer.
	<i>allowed values:</i> No Information						
	<i>allowed values:</i> No Information						
	Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<i>allowed values:</i> -999999						
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Military Other Private
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN ⁻ . These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999						
New	Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Device Power Type	1	No Information	Enumeration	Unitless	0	The method by the device is powered, if any.
	<i>allowed values:</i> Compressed Air No Information			Electricity Other			Gravity Petroleum Product Manual Steam

New	Water Resource Information : Device Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the device and the underlying ground (terrain), liquid or waterbody bottom.
	<i>allowed values:</i>						<i>Above Surface</i> <i>On Waterbody Bottom</i> <i>Below Ground Surface</i> <i>Other</i> <i>No Information</i> <i>Submerged</i> <i>On Surface</i>
	Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
	<i>allowed values:</i>						<i>No Information</i> <i>Partially Operational</i> <i>Non-operational</i> <i>Planned</i> <i>Not in Operation</i> <i>Temporarily Non-operational</i> <i>Operational</i>
New	Feature Code	1	BH230	CONSTRAINED_ STRING	Unitless	5	Feature Code
	<i>allowed values:</i>						<i>BH230</i>
	Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i>						<i>No Information</i>
	Geographic Name Type	2	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i>						<i>Conventional</i> <i>Other</i> <i>Historical Transliterated</i> <i>Provisional</i> <i>Native Transliterated</i> <i>Unverified Transliterated</i> <i>No Information</i> <i>Variant Transliterated</i>
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i>						<i>-999999</i>
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i>						<i>-999999</i>
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<i>allowed values:</i>						<i>Dry</i> <i>Intermittent</i> <i>No Information</i> <i>Perennial</i>
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i>						<i>-999999</i>
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<i>allowed values:</i>						<i>-999999</i>
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i>						<i>No Information</i>
	Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i>						<i>No Information</i>
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i>						<i>False</i> <i>No Information</i> <i>True</i>

New	Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<u>allowed values:</u> -999999						
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<u>allowed values:</u> <i>Damaged</i> No Information <i>Unmaintained</i>			<i>Destroyed</i> <i>Ruined</i>		<i>Dismantled</i> <i>Site Preparation</i>	<i>Intact</i> <i>Under Construction</i>
New	Water Resource Information : Pump Type	1	No Information	Enumeration	Unitless	0	The type of pump used to move liquid or semi-liquid material from one location to another.
	<u>allowed values:</u> <i>Airlift</i> No Information <i>Turbine</i>			<i>Centrifugal</i> <i>Other</i> <i>Vacuum</i>		<i>Gravity</i> <i>Reciprocating</i>	<i>Jet</i> <i>Rotary</i>
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<u>allowed values:</u> U						
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
	<u>allowed values:</u> Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)		Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
	<u>allowed values:</u> No Information						
	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
	<u>allowed values:</u> No Information						
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
	<u>allowed values:</u> No Information						
New	Water Resource Information : Static Water Level	1	-999999	Real	Metre	0	The natural level of the water table in a well, measured with respect to surface level when water is not being actively withdrawn. [Description] May be a positive value when an artesian aquifer is tapped and the resulting pressure is sufficient to raise the water in a connected tube above the surface level.

<i>allowed values:</i> -999999							
<i>allowed values:</i> -999999							
New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999							
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999							
	Terrain Surface Material	3	No Information	Enumeration	Unitless		The type(s) of material that compose the surface layer of the terrain.
<i>allowed values:</i> Asphalt Evaporite Loess Paved				Bedrock Frozen Water Mud Rock	Boulders Gravel No Information Sand	Concrete Lava Flow Other Soil	
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999							
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999							
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information							
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
<i>allowed values:</i> -999999							
New	Water Resource Information : Water Flow	1	-999999	Real	Litres per Minute	0	The rate of water flow through or exiting from a feature.
<i>allowed values:</i> -999999							
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
<i>allowed values:</i> -999999							
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable				No Information Treatable	Nonpotable	Other	
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Seawater				Brackish No Information	Brine Not Applicable	Fresh Saline	
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.

							<i>allowed values:</i> <i>Agricultural Irrigation</i> <i>Institutional</i> <i>Other</i>	<i>Commercial</i> <i>Livestock</i> <i>Power Generation</i>	<i>Domestic Irrigation</i> <i>Municipal</i> <i>Recreational</i>	<i>Industrial</i> <i>No Information</i> <i>Sanitary Domestic</i>	
New	Water Well Construction Description	1	No Information	String	Unitless	2E+09	A narrative or other textual description of the screening, casing, and/or finishing of a water well. [Description] A well screen is system of mesh screening or holes designed to allow water to enter a well or borehole without undue loss of head while excluding sand, silt, and other geologic material. Normally, well screens are required only in relatively unconsolidated materials. A well casing is the tubular structure placed in the drilled hole to maintain the well opening. The casing also confines the ground water to its zone underground and prevents underground or surface water contaminants from mixing with the well water.				
							<i>allowed values:</i> <i>No Information</i>				
							<i>allowed values:</i> <i>No Information</i>				
New	Well Morphology	3	No Information	Enumerations	Unitless	0	The type(s) and/or morphology(ies) of terrain material that surround a well shaft.				
							<i>allowed values:</i> <i>Basalt</i> <i>Dolomite</i> <i>Karst</i> <i>Mud</i> <i>Schist</i>	<i>Boulders</i> <i>Granite</i> <i>Limestone</i> <i>No Information</i> <i>Semi-consolidated and Consolidated Volcanic Ash</i>	<i>Clay</i> <i>Gravel</i> <i>Marl</i> <i>Other</i> <i>Unconsolidated</i>	<i>Conglomerate</i> <i>Igneous Rock</i> <i>Metamorphic Rock</i> <i>Sand</i> <i>Volcanic Rock</i>	
							<i>allowed values:</i> <i>Artesian</i> <i>No Information</i>	<i>Drilled</i> <i>Other</i>	<i>Dug</i> <i>Walled-in</i>	<i>Dug or Drilled</i>	
	Well Type	1	No Information	Enumeration	Unitless	0	The type of a well, generally based on method of construction.				
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<i>allowed values:</i> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False			No Information			True
New	Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<i>allowed values:</i> -999999						
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
New	Water Resource Information : Pump Type	1	No Information	Enumeration	Unitless	0	The type of pump used to move liquid or semi-liquid material from one location to another.
	<i>allowed values:</i> Airlift No Information Turbine			Centrifugal Other Vacuum			Gravity Reciprocating Jet Rotary
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<i>allowed values:</i> U						
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

allowed values:	Army Geographic Agency (Netherlands)	Army Geographic Centre (Spain)	Army Geographic Institute (Portugal)	Bundeswehr Geoinformation Office (Germany)

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
New Water Resource Information : Static Water Level	1	-999999	Real	Metre	0	The natural level of the water table in a well, measured with respect to surface level when water is not being actively withdrawn. [Description] May be a positive value when an artesian aquifer is tapped and the resulting pressure is sufficient to raise the water in a connected tube above the surface level.
allowed values: -999999						
allowed values: -999999						
New Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
allowed values: -999999						
New Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
allowed values: -999999						
Terrain Surface Material	3	No Information	Enumeration	Unitless		The type(s) of material that compose the surface layer of the terrain.
allowed values:						
Asphalt			Bedrock			Boulders
Evaporite			Frozen Water			Gravel
Loess			Mud			No Information
Paved			Rock			Sand
						Concrete
						Lava Flow
						Other
						Soil
New Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
allowed values: -999999						
New Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
allowed values: -999999						

	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<i>allowed values:</i>	No Information					
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
	<i>allowed values:</i>	-999999					
New	Water Resource Information : Water Flow	1	-999999	Real	Litres per Minute	0	The rate of water flow through or exiting from a feature.
	<i>allowed values:</i>	-999999					
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i>	-999999					
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i>	Contaminated Potable		No Information Treatable		Nonpotable	Other
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
	<i>allowed values:</i>	Alkaline Mineral Seawater		Brackish No Information		Brine Not Applicable	Fresh Saline
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
	<i>allowed values:</i>	Agricultural Irrigation Institutional Other		Commercial Livestock Power Generation		Domestic Irrigation Municipal Recreational	Industrial No Information Sanitary Domestic
New	Water Well Construction Description	1	No Information	String	Unitless	2E+09	A narrative or other textual description of the screening, casing, and/or finishing of a water well. [Description] A well screen is system of mesh screening or holes designed to allow water to enter a well or borehole without undue loss of head while excluding sand, silt, and other geologic material. Normally, well screens are required only in relatively unconsolidated materials. A well casing is the tubular structure placed in the drilled hole to maintain the well opening. The casing also confines the ground water to its zone underground and prevents underground or surface water contaminants from mixing with the well water.
	<i>allowed values:</i>	No Information					
	<i>allowed values:</i>	No Information					
New	Well Morphology	3	No Information	Enumerations	Unitless	0	The type(s) and/or morphology(ies) of terrain material that surround a well shaft.
	<i>allowed values:</i>	Basalt Dolomite Karst Mud Schist		Boulders Granite Limestone No Information Semi-consolidated and Consolidated Volcanic Ash		Clay Gravel Marl Other Unconsolidated	Conglomerate Igneous Rock Metamorphic Rock Sand Volcanic Rock
	Well Type	1	No Information	Enumeration	Unitless	0	The type of a well, generally based on method of construction.
	<i>allowed values:</i>	Artesian No Information		Drilled Other		Dug Walled-in	Dug or Drilled

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Waterwork (Area 00)

New ☐ Waterwork

An establishment for storing, purifying, and supplying an area or town with water.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999, -999999]			No Information			
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999						
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values:</i> -999999						

	Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
	<i>allowed values:</i>	No Information Partially Operational		Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New	Feature Code	1	BH220	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i>	BH220					
	Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i>	No Information					
	Geographic Name Type	2	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i>	Conventional Other		Historical Transliterated Provisional			Native Transliterated Unverified Transliterated No Information Variant Transliterated
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i>	-999999					
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i>	-999999					
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i>	-999999					
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<i>allowed values:</i>	-999999					
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i>	No Information					
	Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i>	No Information					
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i>	False		No Information			True
New	Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.

Sanitary Domestic

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
-------	---	---------	------	-------	---	--

allowed values: -999999

Wireless Telecommunication Information : Wireless Telecommunication Type	1	No Information	Enumeration	Unitless	0	The type of a wireless telecommunication service based on the mechanism(s) of transmission and/or the nature of the communication(s) supported. [Description] For example, radio broadcast or mobile phone service.
--	---	----------------	-------------	----------	---	---

allowed values: Cellular Phone
Other
Television (TV)

Microwave Radio Relay
Radio Broadcast

Mobile Phone
Radio Telephone

No Information
Radio-telegraph

Feature Waterwork (Point 00)

New ☐ Waterwork

An establishment for storing, purifying, and supplying an area or town with water.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
allowed values: No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
allowed values: -999999						
Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
allowed values: [-999999, -999999]			No Information			
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
allowed values: -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
allowed values: -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).

	<i>allowed values:</i> Civilian National Public		International No Information State				Joint Military and Civilian Other	Military Private
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.	
	<i>allowed values:</i> -999999							
New	Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.	
	<i>allowed values:</i> -999999							
	Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.	
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational	Operational
New	Feature Code	1	BH220	CONSTRAINED_STRING	Unitless	5	Feature Code	
	<i>allowed values:</i> BH220							
	Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.	
	<i>allowed values:</i> No Information							
	Geographic Name Type	2	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.	
	<i>allowed values:</i> Conventional Other			Historical Transliterated Provisional			Native Transliterated Unverified Transliterated	No Information Variant Transliterated
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.	
	<i>allowed values:</i> -999999							
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.	
	<i>allowed values:</i> -999999							
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
	<i>allowed values:</i> -999999							
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.	
	<i>allowed values:</i> -999999							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
	<i>allowed values:</i> No Information							
	Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
	<i>allowed values:</i> No Information							
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.	
	<i>allowed values:</i> False			No Information			True	

New	Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<i>allowed values:</i> -999999						
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
	Predominant Average Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average water velocity, exclusive of high water due to runoff or low water due to drought.
	<i>allowed values:</i> [-999999, -999999]			No Information			
	Predominant Maximum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<i>allowed values:</i> [-999999, -999999]			No Information			
	Predominant Maximum Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.
	<i>allowed values:</i> [-999999, -999999]						
	Predominant Minimum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<i>allowed values:</i> [-999999, -999999]			No Information			
New	Water Resource Information : Pump Type	1	No Information	Enumeration	Unitless		The type of pump used to move liquid or semi-liquid material from one location to another.
	<i>allowed values:</i> Airlift No Information Turbine			Centrifugal Other Vacuum			Gravity Reciprocating Jet Rotary
New	Water Resource Information : Purification Process	1	No Information	Enumeration	Unitless		Water purification process
	<i>allowed values:</i> Blending Filtration No Information Vapor Compression			Desalination Freezing Other			Disinfection Multi-effect evaporation Reverse Osmosis Electrolysis Multi-stage flash Sedimentation/coagulation
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<i>allowed values:</i> U						
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

New	Water Resource Information : Water Flow	1	-999999	Real	Cubic Metres per Second		The rate of water flow through or exiting from a feature.
	<i>allowed values:</i>	-999999					
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i>	-999999					
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless		The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i>	Contaminated Potable		No Information Treatable		Nonpotable	Other
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.
	<i>allowed values:</i>	Alkaline Mineral Saline		Brackish No Information Seawater		Brine Not Applicable	Fresh Other
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
	<i>allowed values:</i>	Agricultural Irrigation Institutional Other		Commercial Livestock Power Generation		Domestic Irrigation Municipal Recreational	Industrial No Information Sanitary Domestic
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature WeighStation (Area 00) New ☐ Weigh Station

A building and associated equipment that is used to inspect and weigh motor vehicles. [Description] Located adjacent to a road and used to enforce a variety of motor vehicle safety regulations. Motor vehicles may be weighed by driving them onto a platform.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.	
allowed values:	<i>No Information</i>						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
allowed values:	<i>No Information</i>						

Vehicle Scale Count	1	-999999	REAL	Unitless	0	The number of vehicle scales at a weigh station. [Description] A weigh station is a building and associated equipment that is used to inspect and weigh motor vehicles. It is located adjacent to a road and used to enforce a variety of motor vehicle safety regulations. Motor vehicles may be weighed by driving them onto a platform.
---------------------	---	---------	------	----------	---	--

allowed values: -999999

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature WeighStation (Point 00)

New ☐ Weigh Station

A building and associated equipment that is used to inspect and weigh motor vehicles. [Description] Located adjacent to a road and used to enforce a variety of motor vehicle safety regulations. Motor vehicles may be weighed by driving them onto a platform.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AQ180	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AQ180						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> No Information			Other			Railway Transport Road Transport
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.

allowed values: -999999

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
New Manufactured Building	1	No Information	Boolean	Unitless	0	An indication that a building is free-standing (detached) and self-contained and is built in a factory and then towed by a tractor to its semi-permanent site.
<i>allowed values:</i> FALSE			No Information		TRUE	
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information		True	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined		Dismantled Site Preparation Intact Under Construction	
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
allowed values: -999999

<i>allowed values:</i> AJ050						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.

[Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Location Referenced to Shoreline	1	No Information	Enumeration	Unitless	0	The location of an object in relation to a land water boundary.
<i>allowed values:</i> At Shoreline			Inland			No Information Offshore

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<i>allowed values:</i>

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Tower Shape	1	No Information	Enumeration	Unitless	0	The general shape and/or structure of a tower.

<i>allowed values:</i> Mast Truss			No Information Tubular			Other Tripod
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Aluminum Iron Other Stone			Brick Masonry Prestressed Concrete Treated Timber			Concrete Metal Reinforced Concrete Wood Fibreglass No Information Steel
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
<i>allowed values:</i> No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Zoo (Area 00)

New ☐ Zoo

A site where wild animals are kept for exhibition to the public, that may also support breeding and/or study.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AK180	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AK180						

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

allowed values:	Army Geographic Agency (Netherlands)	Army Geographic Centre (Spain)	Army Geographic Institute (Portugal)	Bundeswehr Geoinformation Office (Germany)
	Defence Acquisition and Logistics Organization (Denmark)	Defence Geographic Centre Intelligence Collection Group (United Kingdom)	Defence Imagery and Geospatial Organisation (Australia)	Defense Information Security (Italy)
	General Command of Mapping (Turkey)	Geographic Service (Belgium)	Geographic Service of the Czech Armed Forces (Czech Republic)	Geospatial Information Agency (Latvia)
	Geospatial Intelligence Organisation (New Zealand)	Hellenic Military Geographic Service (Greece)	Joint Geography Bureau (France)	Mapping and Charting Establishment (Canada)
	Mapping Service (Hungary)	Military Geographic Group (Estonia)	Military Geographic Service (Norway)	Military Geography Division (Poland)
	Military Mapping Centre (Lithuania)	Military Topographic Directorate (Romania)	Military Topographic Service (Bulgaria)	National Army Topographic Service (Moldova)

	Topographic Service (Finland)	U.S. Africa Command (USAFRICOM)	U.S. Air Force	U.S. Army
	U.S. Army Geospatial Center (AGC)	U.S. Central Command (USCENTCOM)	U.S. Central Intelligence Agency (CIA)	U.S. Coast Guard
	U.S. Defense Intelligence Agency (DIA)	U.S. Department of Energy (DOE)	U.S. Department of Homeland Security (DHS)	U.S. Department of State
	U.S. European Command (USEUCOM)	U.S. Federal Bureau of Investigation (FBI)	U.S. Geological Survey (USGS)	U.S. Joint Forces Command (USJFCOM)
	U.S. Marine Corps	U.S. National Civil Applications Program (NCAP)	U.S. National Geospatial-Intelligence Agency (NGA)	U.S. National Oceanic and Atmospheric Administration
	U.S. National Reconnaissance Office (NRO)	U.S. National Security Agency (NSA)	U.S. Navy	U.S. Northern Command (USNORTHCOM)
	U.S. Pacific Command (PACOM)	U.S. Southern Command (USSOUTHCOM)	U.S. Special Operations Command (USSOCOM)	U.S. Strategic Command (USSTRATCOM)
	U.S. Transportation Command (USTRANSCOM)			

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature Zoo (Point 00)

New ☐ Zoo

A site where wild animals are kept for exhibition to the public, that may also support breeding and/or study.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AK180	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AK180						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999
