Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<i>allowed values:</i>	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> <div> <div>Brick</div> <div>Other</div> <div>Steel</div> </div> <div> <div>Concrete</div> <div>Prestressed Concrete</div> <div>Stone</div> </div> <div> <div>Masonry</div> <div>Reinforced Concrete</div> <div>Treated Timber</div> </div> <div> <div>No Information</div> <div>Soil</div> <div>Wood</div> </div>						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Usable Length	1	-999999	REAL	Metre	0	The interior length of a structure (for example: an aircraft bunker or a lock). [Description] The length is taken along the primary alignment of the structure. If the structure is irregular in shape the length is along its greatest horizontal dimension, else if the structure is regular in shape then a shape-specific rule may apply: for a rectangular structure, the length of the longer axis; for a round structure, the diameter.
<i>allowed values:</i> -999999						
Usable Width	1	-999999	REAL	Metre	0	The interior width of a structure. [Description] For example, an aircraft bunker or a lock.
<i>allowed values:</i> -999999						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature MaricultureSite (Area 00) New ☐ Mariculture Site

A site where marine organisms are cultivated for food and other products in either the open ocean, in an enclosed section of the ocean, or in tanks, ponds or raceways that are filled with seawater (for example: the farming of marine fish, prawns, or oysters in saltwater ponds).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aquaculture Facility Type	1	No Information	Enumeration	Unitless	0	The type, purpose, or intended role served by an aquaculture facility.
<i>allowed values:</i> Kelp Farm Shrimp Farm			Marine Culture			No Information Sea Ranch
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Conspicuous Air Category	1	No Information	Enumeration	Unitless	0	The manner in which an object is conspicuous when viewed from the air. [Description] A conspicuous feature is easily detected and identified under varying conditions (for example: lighting). Factors affecting conspicuousness include size, shape, and/or height.
<i>allowed values:</i> No Information			Not Conspicuous			Visual
Conspicuous Ground Category	1	No Information	Enumeration	Unitless	0	The manner in which an object is conspicuous when viewed from on the ground. [Description] A conspicuous feature is easily detected and identified under varying conditions (for example: lighting). Factors affecting conspicuousness include size, shape, and/or height.
<i>allowed values:</i> No Information			Not Conspicuous			Visual
Conspicuous Sea Category	1	No Information	Enumeration	Unitless	0	The manner in which an object is conspicuous when viewed from the sea. <i>allowed values:</i> BH050						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Marine Farm Enclosure Method	1	No Information	Enumeration	Unitless	0	The method by which a marine farm is enclosed.
<i>allowed values:</i> Fencing Other Fishing Stakes Nets No Information						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False No Information True						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained Destroyed Ruined Dismantled Site Preparation Intact Under Construction						
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Bivalve Mollusc Mussels Crustacean No Information Cultivated Shellfish Other Fish Oysters						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature MaritimeCautionArea (Area 00)

New ☐ Maritime Caution Area

Generally, an area where the mariner has to be made aware of circumstances influencing the safety of navigation. [Description] The caution may represent a specific danger, a general risk, or a rule and/or navigation advice that is not directly related to a specific object. Appropriate consideration should be given, for example, to the specific identification of wrecks, hazardous rocks and wells.

[Description] May be in accordance with certain specified conditions. The official legal statue of each kind of restricted area defines the kind of restriction(s).	
<i>allowed values:</i>	Conservation and Management Zone Fishery Zone Mine Danger Area Petroleum Field		Degaussing Range Historic Wreck Area Natural Gas Field Reclamation Area			Dredging Area Incineration Area No Information Swinging Area	Fairway Joint Economic Development Zone Other Traffic Services Limit
Maritime Caution Type	3	No Information	Enumeration	Unitless	0	The type(s) of circumstance(s) influencing the safety of navigation that mariners should observe in an area.	
<i>allowed values:</i>	Cargo Transshipment No Information Works in Progress Area		Clearing Line Ocean Current Margin			COLREGS Demarcation Line Other	Harbour Area Pollution Zone
Maritime Navigation Line Features	1	No Information	Enumeration	Unitless	0	The type and/or number of features associated with a maritime navigation line (for example: a leading line, a transit line, or a clearing line).	
<i>allowed values:</i>	Directional Light Other		Measured Distance Markers Two Beacons or more			No Information Two Lights or more	One other than Directional Light Two other than Two Lights or Beacons
Maritime Navigation Marked	1	No Information	Boolean	Unitless	0	An indication that a feature is significant to maritime safety of navigation and is marked (for example: by a light or beacon) by a maritime-specific navigational aid. [Description] Mariners may also use other prominent features (for example: rotating aeronautical beacons or lighted structures) for informal navigational purposes.	
<i>allowed values:</i>	FALSE		No Information		TRUE		
Maritime Navigation Restriction	3	No Information	Enumeration	Unitless	0	The type of maritime navigation restriction(s) in an area that are designated by an appropriate authority. [Description] May be in accordance with certain specified conditions. The official legal statue of each kind of restricted area defines the kind of restriction(s).	
<i>allowed values:</i>	Entry Prohibited		Entry Restricted			No Information	Other

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Naval Firing and/or Practice Type	3	No Information	Enumeration	Unitless	0	The type(s) of an area where firing and/or munition exercises are conducted by Naval forces (for example: vessels or aircraft) based on the purpose(s) of the firing, practice, or exercise and/or the nature of the equipment employed.
allowed values: Firing Danger Area			Mine Laying Practice Area			No Information Other
Naval Operations Type	3	No Information	Enumeration	Unitless	0	The type(s) of an area in which operations are conducted by Naval forces (for example: vessels or aircraft) based on the size, purpose, forces deployed and/or operation(s) conducted.
allowed values: FORACS V Limit			No Information			Other Submarine Exercise Area
Operational	1	No Information	Boolean	Unitless	0	An indication that a feature is operational.
allowed values: False			No Information			True
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
allowed values: Ammunition No Product			Chemical Other			Explosive Radioactive Material No Information
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values:

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
----------------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Feature MaritimeNavigationBeacon (Point 00)

New ☐ Maritime Navigation Beacon

A prominent, specially constructed object forming a conspicuous mark as a fixed aid to navigation or for use in hydrographic survey.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Character of Light	1	No Information	Constrained_String	Unitless	254	The characteristic description of a maritime light or lights at one geographic position that includes its class, number and color(s) of flashes or occultations. [Description] This text is structured as it traditionally has been represented on a paper chart.

allowed values: No Information

Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<u>allowed values:</u> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>

New Feature Code	1	BC010	CONSTRAINED_STRING	Unitless	5	Feature Code
------------------	---	-------	--------------------	----------	---	--------------

allowed values: BC010

Fog Signal Type	1	No Information	Enumeration	Unitless		The type of a fog signal based on its signal characteristics and method of generation.
<u>allowed values:</u> Bell Horn Other			Diaphone No Information Reed			Explosive None Siren Gong <i>Not Applicable</i> Whistle

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
---	---	----------------	--------	----------	-----	---

allowed values: No Information

Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<u>allowed values:</u> Accurate			Approximate			Doubtful No Information

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
-------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Multiple Light Ranges	1	No Information	Constrained_String	Unitless	254	A set of two numbers for light ranges of visibility (at a light) expressed in nautical miles.
-----------------------	---	----------------	--------------------	----------	-----	---

allowed values: No Information

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
---	---	----------------	--------	----------	----	--

allowed values: No Information

Navigation Mark Colour	3	No Information	Enumeration	Unitless		The colour(s) of a International Association of Lighthouse Authorities (IALA) navigation mark. [Description] When the navigation mark is patterned, the Attribute: 'Colour Pattern' may be used to identify the pattern and a corresponding list of colours specified.
<i>allowed values:</i>	Black Grey Red		Blue No Information Violet		Brown Orange White	Green Other Yellow
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i>	Damaged No Information Unmaintained		Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction
Radar Reflector Present	1	No Information	Boolean	Unitless	0	An indication that an object has an associated radar reflector.
<i>allowed values:</i>	FALSE		No Information		TRUE	
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i>	U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature MaritimeNavigationLight (Point 00)

New ☐ Maritime Navigation Light

A luminous or lighted device intended for the purpose of aiding maritime navigation. [Description] A Maritime Navigation Light refers to the light itself including its housing but does not include any support structure or ancillary aids to maritime navigation.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Character of Light	1	No Information	Constrained_String	Unitless	254	The characteristic description of a maritime light or lights at one geographic position that includes its class, number and color(s) of flashes or occultations. [Description] This text is structured as it traditionally has been represented on a paper chart.
allowed values: No Information						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
allowed values: No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BC040	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: BC040						
Fog Signal Type	1	No Information	Enumeration	Unitless		The type of a fog signal based on its signal characteristics and method of generation.
allowed values: Bell Horn Other			Diaphone No Information Reed			Explosive None Siren Gong Not Applicable Whistle
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values: No Information						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
allowed values: Accurate			Approximate			Doubtful No Information
IALA A or B Adopted	1	No Information	Boolean	Unitless	0	An indication that an International Association of Marine Aids to Navigation and Lighthouse Authorities (IALA) bouyage system has been adopted by the national authority.
allowed values: FALSE			No Information			TRUE
Light Elevation	1	-999999	Real	Metre		The height of a light measured from a specified datum (for example: vertical or sounding), usually high water, as defined by the National agency. [Description] When used with a buoy the elevation is measured from the water surface; when used with a lighthouse the elevation is typically measured from ground level.
allowed values: -999999						

Maritime Light Type	3	No Information	Enumeration	Unitless		The type of a maritime light based on its structure, location and/or intended use(s).	
<i>allowed values:</i>	Moiré Effect Light		No Information		Other	Sectored Light	
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i>	No Information						
Multiple Light Ranges	1	No Information	Constrained_String	Unitless	254	A set of two numbers for light ranges of visibility (at a light) expressed in nautical miles.	
<i>allowed values:</i>	No Information

Feature MaritimeRadarRefLine (Line 00)

New ☐ Maritime Radar Reference Line

A track along which ships may be guided by coastal radar stations, especially in the event of reduced visibility.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Bearing and Reciprocal Category	1	No Information	String	Unitless	14	The true course of a vessel when proceeding along a track or route, followed by its reciprocal bearing.
<i>allowed values:</i> No Information						
New Feature Code	1	FC130	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> FC130						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

allowed values: No Information

Feature MaritimeRadiobeacon (Point 00)

New ☐ Maritime Radiobeacon

An electronic aid to maritime navigation consisting of a radio transmitter that broadcasts distinctive signals.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Broadcast Frequency	1	-999999	Integer	Hertz		The transmission frequency of a radio communications device (for example: a television station or a radiobeacon).
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	BC034	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BC034						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Maritime Radiobeacon Type	1	No Information	Enumeration	Unitless		The type of an electronic aid to maritime navigation consisting of a radio transmitter that broadcasts distinctive and/or characteristic signals. [Description] For example, a directional radio beacon or a radar marker (RAMARK).
<i>allowed values:</i> Circular Radiobeacon QTG Station Rotating Pattern Radiobeacon			Directional Radiobeacon Radar Marker (RAMARK)			No Information Radar Responder Beacon (RACON) Other Radio Direction Finding Station
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation System Type	3	No Information	Enumeration	Unitless		The type(s) of equipment or system used in electronic navigation.
<i>allowed values:</i> No Information Radar Station			Non-Directional Radio Beacon (NDB) Unspecified Radio Beacon			None Other
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Primary Operating Range	1	-999999	Real	Nautical Mile		The primary range of the NAVAID beyond which the capture of the signal is not completely assured.
<i>allowed values:</i> -999999						
Radar Reflector Present	1	No Information	Boolean	Unitless	0	An indication that an object has an associated radar reflector.
<i>allowed values:</i> FALSE			No Information			TRUE
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature MaritimeRoute (Area 00)

New ☐ Maritime Route

A track or lane established for the safe passage of vessels.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Hydrographic Depth : Sounding Metadata : Bathymetric Measurement Quality Category	3	No Information	Enumeration	Unitless	0	A general evaluation of the qualities of a bathymetric measurement, as a category. [Description] Drying heights are typically captured using negative (bathymetric) sounding values; their certainty of measurement may be categorized in the same manner as positive values.
<i>allowed values:</i> Depth Doubtful Least Depth <i>Not Applicable</i> Unconfirmed Depth			Depth Known Maintained Depth <i>Other</i> Unmaintained Depth			Depth Unreliable <i>No Information</i> Safe Clearance Known
Hydrographic Depth : Sounding Metadata : Bathymetric Measurement Technique	3	No Information	Enumeration	Unitless	0	The technique used to determine water depth(s).
<i>allowed values:</i> Area Swept by Side-scan Sonar Computer Generated Lead-line <i>Other</i> Singlebeam			Area Swept by Vertical Acoustic System Diver Levelling Photogrammetry Underwater Utility Vehicle			Bathymetric LiDAR Electromagnetic Sensor <i>No Information</i> Side-scan Sonar
Bearing and Reciprocal Category	1	No Information	String	Unitless	14	The true course of a vessel when proceeding along a track or route, followed by its reciprocal bearing.
<i>allowed values:</i> <i>No Information</i>						
Bearing from Seaward	1	-999999	REAL	Arc Degree	0	The bearing of an object measured from a position at sea to the object (not from the object to somewhere at sea).
<i>allowed values:</i> <i>-999999</i>						
Bidirectional	1	No Information	Boolean	Unitless	0	An indication that a feature supports bidirectional flow.
<i>allowed values:</i> <i>False</i>			<i>No Information</i>			<i>True</i>
Description of Aids to Navigation	1	No Information	String	Unitless	2E+09	Textual description of aids to navigation marking a feature. [Description] For example, 'marked by buoys'.
<i>allowed values:</i> <i>No Information</i>						
Description of Reference Point	1	No Information	String	Unitless	2E+09	Description of the feature(s) which form a Leading Line or Clearing Line.
<i>allowed values:</i> <i>No Information</i>						
Direction of Flow	1	-999999	REAL	Arc Degree	0	The bearing of movement or direction of the flow.
<i>allowed values:</i> <i>-999999</i>						
New Feature Code	1	FC165	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> <i>FC165</i>						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> <i>No Information</i>						
Hydrographic Depth	1	-999999	REAL	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> <i>-999999</i>						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> <i>-999999</i>						

Maritime Navigation Marked	1	No Information	Boolean	Unitless	0	An indication that a feature is significant to maritime safety of navigation and is marked (for example: by a light or beacon) by a maritime-specific navigational aid. [Description] Mariners may also use other prominent features (for example: rotating aeronautical beacons or lighted structures) for informal navigational purposes.	
allowed values:	FALSE		No Information		TRUE		
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
allowed values:	No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
allowed values:	No Information						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
allowed values:	U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.	
allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)		Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.	
allowed values:	No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.	
allowed values:	No Information						
Route Intended Use	1	No Information	Enumeration	Unitless	0	The intended use of a maritime route. [Description] Unless stated otherwise, routing systems are recommended for use by all ships and may be made mandatory for all ships, certain categories of ships or ships carrying certain cargoes, or types and quantities of bunker fuel. Routeing systems are intended for use by day and by night in all weathers, in ice-free waters or under light ice conditions where no extraordinary manoeuvres or icebreaker assistance are required.	
allowed values:	Deep Water Route Recommended Direction of Traffic Flow Transit Route		No Information Recommended Route Two-way Route		Other Recommended Track for Deep Draft Vessels Q-Route Recommended Track for Other Than Deep Draft Vessels		
Hydrographic Depth : Sounding Metadata : Sounding Datum	1	No Information	Enumeration	Unitless	0	The tidal datum to which soundings and drying heights are referenced. [Description] It is usually taken to correspond to a low water stage of the tide.	

allowed values:	Approximate Lowest Astronomical Tide	Approximate Mean Low Water	Approximate Mean Low Water Springs	Approximate Mean Lower Low Water		
	Approximate Mean Sea Level	Chart Datum (Unspecified)	Equinoctial Spring Low Water	High Water		
	High Water Springs	Higher High Water	Higher High Water Large Tide	Highest Astronomical Tide		
	Highest High Water	Indian Spring High Water	Indian Spring Low Water	International Great Lakes Datum 1985		
	Local Datum	Low Water	Low Water Springs	Lower Low Water		
	Lower Low Water Large Tide	Lowest Astronomical Tide	Lowest Low Water	Lowest Low Water Springs		
	Mean High Water	Mean High Water Neaps	Mean High Water Springs	Mean Higher High Water		
	Mean Higher High Water Springs	Mean Low Water	Mean Low Water Neaps	Mean Low Water Springs		
	Mean Lower Low Water	Mean Lower Low Water Springs	Mean Sea Level	Mean Tide Level		
	Mean Water Level	Neap Tide	Nearly Highest High Water	Nearly Lowest Low Water		
	No Information	Other	Spring Tide			
Hydrographic Depth : Sounding Metadata : Sounding Datum Name	1	No Information	String	Unitless	80	The name of the tidal datum to which soundings and drying heights are referenced. [Description] Used when the sounding datum is known but not specified using Attribute: 'Sounding Datum'.
allowed values:	No Information					
Hydrographic Depth : Sounding Metadata : Sounding Velocity Correction Method	1	No Information	Enumeration	Unitless	0	The method of correction that has been used to correct a sounding velocity instrument reading to obtain the correct depth.
allowed values:	Mathews Tables	No Information				
	Sound Velocity Meter	Sounder 1500 Calibrated				
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Hydrographic Depth : Sounding Metadata : Vessel Draft Correction	1	No Information	Boolean	Unitless	0	An indication that a vessel draft correction has been applied.
allowed values:	False	No Information				
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Route Intended Use	1	No Information	Enumeration	Unitless	0	The intended use of a maritime route. [Description] Unless stated otherwise, routing systems are recommended for use by all ships and may be made mandatory for all ships, certain categories of ships or ships carrying certain cargoes, or types and quantities of bunker fuel. Routing systems are intended for use by day and by night in all weathers, in ice-free waters or under light ice conditions where no extraordinary manoeuvres or icebreaker assistance are required.
allowed values:						
Deep Water Route			No Information			Other
Recommended Direction of Traffic Flow			Recommended Route			Recommended Track for Deep Draft Vessels
Transit Route			Two-way Route			Q-Route
						Recommended Track for Other Than Deep Draft Vessels
Hydrographic Depth : Sounding Metadata : Sounding Datum	1	No Information	Enumeration	Unitless	0	The tidal datum to which soundings and drying heights are referenced. [Description] It is usually taken to correspond to a low water stage of the tide.

allowed values:	Approximate Lowest Astronomical Tide Approximate Mean Sea Level High Water Springs Highest High Water Local Datum Lower Low Water Large Tide Mean High Water Mean Higher High Water Springs Mean Lower Low Water Mean Water Level No Information	Approximate Mean Low Water Chart Datum (Unspecified) Higher High Water Indian Spring High Water Low Water Lowest Astronomical Tide Mean High Water Neaps Mean Low Water Mean Lower Low Water Springs Neap Tide Other	Approximate Mean Low Water Springs Equinoctial Spring Low Water Higher High Water Large Tide Indian Spring Low Water Low Water Springs Lowest Low Water Mean High Water Springs Mean Low Water Neaps Mean Sea Level Nearly Highest High Water Spring Tide	Approximate Mean Lower Low Water High Water Highest Astronomical Tide International Great Lakes Datum 1985 Lower Low Water Lowest Low Water Springs Mean Higher High Water Mean Low Water Springs Mean Tide Level Nearly Lowest Low Water		
Hydrographic Depth : Sounding Metadata : Sounding Datum Name	1	No Information	String	Unitless	80	The name of the tidal datum to which soundings and drying heights are referenced. [Description] Used when the sounding datum is known but not specified using Attribute: 'Sounding Datum'.
allowed values: No Information						
Hydrographic Depth : Sounding Metadata : Sounding Velocity Correction Method	1	No Information	Enumeration	Unitless	0	The method of correction that has been used to correct a sounding velocity instrument reading to obtain the correct depth.
allowed values:	Mathews Tables Sound Velocity Meter	No Information Sounder 1500 Calibrated				Not Applicable Sounder 4800 Calibrated Other Sounder Other Calibrated
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Hydrographic Depth : Sounding Metadata : Vessel Draft Correction	1	No Information	Boolean	Unitless	0	An indication that a vessel draft correction has been applied.
allowed values: False		No Information				True
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
-----------	-------------	---------	-----------	-------	--------	----------------------

Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<u>allowed values:</u> No Information						
Administrative Division	1	No Information	Enumeration	Unitless	0	The nature of an administrative division as established by an international body (for example: the United Nations), a supranational body (for example: the European Union), a State (for example: France), or a similar entity (for example: the Vatican) or organization (for example: the International Hydrographic Organization).
<u>allowed values:</u> International or Supranational No Information			Local Other	Municipal Sublocal	National Subnational	
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<u>allowed values:</u> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999						
Base Elevation	1	-999999	REAL	Metre	0	The vertical distance from a specified vertical datum to the terrain surface of or at the base of the feature. [Description] If the feature is not supported above the surface by another feature then the base of the feature is usually located at ground or water level on the downhill/downstream side. For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). In the case of a survey marker (monument) this is usually the elevation assigned to the marker (monument).
<u>allowed values:</u> -999999						
Wireless Telecommunication Information : Broadcast Frequency	1	-999999	Integer	TBD	0	The transmission frequency of a radio communications device (for example: a television station or a radiobeacon).
<u>allowed values:</u> -999999						
Conspicuous Air Category	1	No Information	Enumeration	Unitless	0	The manner in which an object is conspicuous when viewed from the air. [Description] A conspicuous feature is easily detected and identified under varying conditions (for example: lighting). Factors affecting conspicuousness include size, shape, and/or height.
<u>allowed values:</u> No Information Visual and Radar			Not Conspicuous	Radar	Visual	
Conspicuous Ground Category	1	No Information	Enumeration	Unitless	0	The manner in which an object is conspicuous when viewed from on the ground. [Description] A conspicuous feature is easily detected and identified under varying conditions (for example: lighting). Factors affecting conspicuousness include size, shape, and/or height.
<u>allowed values:</u> No Information			Not Conspicuous	Visual		
Conspicuous Sea Category	1	No Information	Enumeration	Unitless	0	The manner in which an object is conspicuous when viewed from the sea. [Description] A conspicuous feature is easily detected and identified under varying conditions (for example: lighting). Factors affecting conspicuousness include size, shape, and/or height.
<u>allowed values:</u> No Information Visual and Radar			Not Conspicuous	Radar	Visual	
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<u>allowed values:</u> Civilian Other			Joint Military and Civilian Private	Military Public	No Information	
Cross-sectional Shape	1	No Information	Enumeration	Unitless	0	The cross-sectional shape of a feature. [Description] Typically as viewed from profile.
<u>allowed values:</u> Circular Other			Elliptical Rectangular	Irregular Square	No Information Triangular	
DIAM Functional Classification	1	No Information	String	Unitless	14	The functional classification code for facilities as specified by DIA Manual (DIAM) 65-3-1 and encoded by the data element CATEGORY as required by DoD Directive 5105.21. [Description] Function classification codes provide a hierarchical structure for defining the detailed purpose of a facility. The Joint Chiefs of Staff (JCS) defines a facility as 'a real property performing a unique function and consisting of one or more of the following components: buildings, structures or equipment', for example: storage tanks or a pumping house. The JCS defines an installation as 'a group of facilities, or facility, in a specific geographic area which support a general functional purpose', for example: a petroleum production plant composed of all of its associated refining operations, blending operations, pumping houses and storage tanks all located within the fence line of the petroleum plant.
<u>allowed values:</u> No Information						
Directivity	1	No Information	Enumeration	Unitless	0	The side(s) of a feature that produce the greatest visual significance and/or reflectivity potential.
<u>allowed values:</u> Bidirectional			No Information	Omnidirectional	Unidirectional	
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a facility, as a whole.

allowed values: No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational		Operational
New Feature Code	1	BB155	CONSTRAINED_ STRING	Unitless	5	Feature Code
allowed values: BB155						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
allowed values: Emergency Shelter Maritime Pilotage Port Control		Harbour Control No Information Rescue and Paramedical Services		Inland Waters Transport Other Signalling		Maritime Defense Pilot Station Water Transport
Floodlit	1	No Information	Boolean	Unitless	0	An indication that a structure is floodlit.
allowed values: False		No Information		True		
Floor Count	1	-999999	Real	Unitless	0	The number of floors in a structure (for example: a building).
allowed values: -999999						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values: No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
allowed values: -999999						
Helipad Present	1	No Information	Boolean	Unitless	0	An indication that a helipad is present.
allowed values: False		No Information		True		
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
allowed values: -999999						
Historic Significance	1	No Information	Enumeration	Unitless	0	The recognized historic significance of a site and/or facility, if any.
allowed values: Ancient National Political		Battlefield No Information		Historic Not Significant		Military Other
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
Maritime Station Type	3	No Information	Enumeration	Unitless	0	The type(s) of activities of significance to navigation and/or operation that takes place at a maritime station.
allowed values: Bridge Signal Station Ice Signal Station No Information Port Control Station Signal Station Time Ball Station Warning Signal Station		Coast Guard Station International Port Signals Station Other Radar Surveillance Station Storm Signal Station Time Signal Station Water-police Station		Fireboat Station Lock Signal Station Pilot Lookout Station Rescue Station Tidal Stream Station Traffic Signal Station Weather Signal Station		Fog Signal Military Practice Signal Station Pilot Station Signal Mast Tide Station Unmanned Oceanographic Station
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).
<i>allowed values:</i> Depressed			Level			No Information Raised
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<i>allowed values:</i>			Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i>			Conical Flat with Parapet Pitched with Clerestory With Clerestory With Steeple	Domed No Information Pyramidal With Cupola With Tower	Flat Other Sawtoothed With Minaret With Turret	Flat with Clerestory Pitched Semi-cylindrical With Smokestack

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Structure Shape	1	No Information	Enumeration	Unitless	0	The geometric form, appearance, and/or configuration of the feature as a whole.
allowed values: Board-like Prism Rectangular Prism			Cubic Square Prism			No Information Other
Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
allowed values: False			No Information			True
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
allowed values: Brick Masonry Prestressed Concrete Treated Timber			Concrete Metal Reinforced Concrete Wood			Glass No Information Steel Iron Other Stone
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
allowed values: -999999						
Wireless Telecommunication Information : Wireless Telecommunication Type	1	No Information	Enumeration	Unitless	0	The type of a wireless telecommunication service based on the mechanism(s) of transmission and/or the nature of the communication(s) supported. [Description] For example, radio broadcast or mobile phone service.
allowed values: Cellular Phone Other Television (TV)			Microwave Radio Relay Radio Broadcast			Mobile Phone Radio Telephone No Information Radio-telegraph

Plastic

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
-------	---	---------	------	-------	---	--

allowed values: -999999

Feature Marsh (Area 00)New ☐ Marsh

A soft, poorly drained wetland that is characterized by the growth of only non-woody plants (for example: grasses) and often forms a transition region between a waterbody and land. [Description] It is subject to frequent or tidal inundations, but not considered to be continually under water. It lacks trees. A subtype of the more generalized wetland.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.

allowed values: -999999

New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
--	---	---------	------	----------------------	--	--

allowed values: -999999

Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
---------------------	---	--------------------	---------------	-------	--	--

allowed values: [-999999, -999999]

No Information

Bottom Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing the bottom of a body of water.
----------------------	---	----------------	-------------	----------	---	--

							<div> <div>allowed values:</div> <div> Bedrock Other Sand and Gravel </div> </div>	<div> <div>Clay and Silt Peat Sand over Mud</div> </div>	<div> <div>Gravel and Cobble Rocks and Boulders Silty Sands</div> </div>	<div> <div>No Information Sand Soil</div> </div>
New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre					The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density					The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre					The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
New	Deepest Depth Below Surface Level	1	-999999	Real	Metre					The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
New	Feature Code	1	ED010	CONSTRAINED_STRING	Unitless	5				Feature Code
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200				A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	Hydrologic Persistence	1	No Information	Enumeration	Unitless	0				The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	Length	1	-999999	REAL	Metre	0	Intermittent	No Information	Perennial	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre					The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	Note : Memorandum	1	No Information	String	Unitless	2E+09				A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18				The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
New	Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre					The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	Predominant Maximum Water Depth	1	[-999999, -999999]	Real_Interval	Metre					The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	Predominant Minimum Water Depth	1	[-999999, -999999]	Real_Interval	Metre					The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.

<u>allowed values:</u> [-999999, -999999]		No Information				
Predominant Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> [-999999, -999999]		No Information				
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<u>allowed values:</u>		Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)	
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<u>allowed values:</u> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<u>allowed values:</u> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<u>allowed values:</u> No Information						
Stem Diameter	1	[-999999, -999999]	REAL_Interval	Decimetre	0	The average diameter of the tree trunks in an area, measured at a height of approximately 1.5 metres or 4.5 feet on the high side (if on a hillside) above the surface of the ground. [Description] Commonly referred to as the 'diameter at breast height' (dbh). For trees up to 2 metres high, the stem diameter is measured at the mid-point between the ground and the stem tip.
<u>allowed values:</u> [-999999, -999999] Greater-than Semi-interval Less-than Semi-interval		-999999 Greater-than to Less-than-or-equal Interval No Information		Closed Interval Greater-than-or-equal to Less-than Interval Open Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval
New Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
<u>allowed values:</u> -999999						
New Water Resource Information : Temperature	1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<u>allowed values:</u> -999999						

	Tide Influenced	1	No Information	Boolean	Unitless	0	An indication that a waterbody is affected by the tide.
	<i>allowed values:</i>	<i>False</i>		<i>No Information</i>			<i>True</i>
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.
	<i>allowed values:</i>	<i>-999999</i>					
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units		The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<i>allowed values:</i>	<i>-999999</i>					
	Undergrowth Density	1	[-999999, -999999]	REAL_Interval	Percent	0	The fraction of land within a defined area that is covered by undergrowth (for example: scrub, brush, and/or bush).
	<i>allowed values:</i>	<i>[-999999, -999999]</i>		<i>Closed Interval</i>			<i>Greater-than or Equal Semi-interval</i>
		<i>Greater-than to Less-than-or-equal Interval</i>		<i>Greater-than-or-equal to Less-than Interval</i>			<i>Greater-than Semi-interval</i>
		<i>Open Interval</i>					<i>Less-than Semi-interval</i>
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<i>allowed values:</i>	<i>No Information</i>					
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime		The electrical conductivity of water.
	<i>allowed values:</i>	<i>-999999</i>					
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre		The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i>	<i>-999999</i>					
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless		The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i>	Contaminated Potable		<i>No Information</i> Treatable		Nonpotable	Other
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.
	<i>allowed values:</i>	Alkaline Mineral Saline		Brackish <i>No Information</i> Seawater		Brine <i>Not Applicable</i>	Fresh Other
New	Water Resource Information : Water Use	1	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
	<i>allowed values:</i>	<i>Agricultural Irrigation</i> <i>Institutional</i> <i>Other</i>		<i>Commercial</i> <i>Livestock</i> <i>Power Generation</i>		<i>Domestic Irrigation</i> <i>Municipal</i> <i>Recreational</i>	<i>Industrial</i> <i>No Information</i> <i>Sanitary Domestic</i>
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
	<i>allowed values:</i>	<i>-999999</i>

Feature MeasuredDistanceLine (Line 00)New ☐ Measured Distance Line

A maritime course, the length of which has been accurately measured, whose endpoints are often established by leading lines. [Description] It is used by vessels to calibrate logs, engine revolution counters, and other onboard equipment, and to determine speed.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Bearing and Reciprocal Category	1	No Information	String	Unitless	14	The true course of a vessel when proceeding along a track or route, followed by its reciprocal bearing.
<u>allowed values:</u> No Information						
New Feature Code	1	FC100	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> FC100						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Length of Range	1	-999999	REAL	TBD	0	Length of range established by aids to navigation on the shore.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature MemorialMonument (Area 00)

New ☐ Memorial Monument

A marker erected and/or maintained as a memorial to a person and/or event.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
allowed values: False			No Information			True
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						

Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AL130	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL130						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature MemorialMonument (Line 00)

New ☐ Memorial Monument

A marker erected and/or maintained as a memorial to a person and/or event.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AL130	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL130						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.	
allowed values:	No Information						

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature MilitaryInstallation (Area 00)

New ☐ Military Installation

An installation designed for military use. [Description] For example, used to perform military operations, initiate forward movements, and/or furnish supplies. Often protected by fortifications or natural advantages.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	SU001	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> SU001						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
<i>allowed values:</i> False			No Information			True
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Military Service Branch	1	No Information	Enumeration	Unitless	0	The branch of the armed forces of a nation. [Description] May also be applied to similar organizations following military discipline (for example: a coastguard).

allowed values:	Air Force Coastguard No Information	Air National Guard Joint Other	Army Marines	Army National Guard Navy		
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values:	No Information					
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values:	False	No Information	True			
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
allowed values:	Damaged No Information Unmaintained	Destroyed Ruined	Dismantled Site Preparation	Intact Under Construction		
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values:	U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.

<i>allowed values:</i>	Boulders Other Soil		Concrete Prestressed Concrete Wood		Masonry Reinforced Concrete	No Information Rock
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

<i>allowed values:</i>	No Information					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AM040	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AM040						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values:	-999999					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values:	No Information					
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values:	False					No Information
New Physical Condition	1	No Information	Enumeration	Unitless		True
allowed values:	Damaged					Destroyed
	No Information					Dismantled
	Unmaintained					Intact
						Site Preparation
						Under Construction
Raw Material	3	No Information	Enumeration	Unitless	0	The principal 'raw', or input, material(s) involved in a production activity. [Description] If multiple 'raw' materials are specified then they are usually listed in descending order of importance.
allowed values:	Coal					Gravel
	Ore					Salt
	Stone					No Information
						Sand
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values:	U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					

Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
<i>allowed values:</i> No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature MineShaftSuperstructure (Point 00)

New ☐ Mine Shaft Superstructure

A structure over a vertical mine shaft containing machinery (for example: a winding head or hoist) used to transport minerals, equipment, and/or workers between the surface and various levels within the mine. [Description] It is usually the most prominent structure at a shaft mining facility.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AA020	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AA020						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
---------------------------------	---	----------------	--------	----------	----	---

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

[Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Permanent	1	No Information	Boolean	Unitless	0	An indication that a feature is permanent. [Description] Temporary features last, or are meant to last, for a limited time only.
<i>allowed values:</i> FALSE			No Information			TRUE
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

AGDM v2.1 Draft v2_1draft

MissileSite (Point 00)

allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
allowed values:	Brick Metal Reinforced Concrete		Concrete No Information Steel		Iron Other Stone	Masonry Prestressed Concrete Wood
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature Moat (Area 00)

 New ☐ Moat

A trench surrounding a tract of land and serving as a barrier. [Description] It is usually filled with water.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values: -999999</i>						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values: -999999</i>						
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values: -999999</i>						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values: -999999</i>						
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values: -999999</i>						
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values: -999999</i>						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values: No Information</i>			Non-operational			Not in Operation
<i>Partially Operational</i>			Planned			Temporarily Non-operational
New Feature Code	1	BH100	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values: BH100</i>						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values: -999999</i>						
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values: Dry</i>			Intermittent			Perennial
						No Information

	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
New	<u>allowed values:</u> -999999							
	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.	
	<u>allowed values:</u> -999999							
New	Maximum Water Depth	1	-999999	Real	Metre		Maximum water depth the object was designed to hold.	
	<u>allowed values:</u> -999999							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
	<u>allowed values:</u> No Information							
New	Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.	
	<u>allowed values:</u> -999999							
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.	
	<u>allowed values:</u> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation	Intact Under Construction
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
	<u>allowed values:</u> U							
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.	
	<u>allowed values:</u> No Information							

	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
	<u>allowed values:</u> No Information						
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
	<u>allowed values:</u> No Information						
New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
	<u>allowed values:</u> -999999						
	Terrain Gap Width	1	-999999	REAL	Metre	0	The minimum horizontal bridging distance necessary to cross a channel. [Description] The width is measured perpendicular to the direction of water flow from bank to bank, at the first usable break in slope on each side of the channel above mean high water. Usable banks are those accessible by vehicles; small unusable ledges and cliffs are not considered usable breaks in slopes.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units		The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<u>allowed values:</u> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<u>allowed values:</u> No Information						
	Volume	1	-999999	REAL	Cubic Metre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime		The electrical conductivity of water.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre		The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<u>allowed values:</u> -999999						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless		The potability of water based on the type of treatment required before it is safe for human consumption.
	<u>allowed values:</u> Contaminated Potable			No Information Treatable		Nonpotable	Other
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
	<u>allowed values:</u> Alkaline Mineral Seawater			Brackish No Information		Brine Not Applicable	Fresh Saline

New	Water Resource Information : Water Use	1	No Information	Enumeration	Unitless	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
<i>allowed values:</i> <i>Agricultural Irrigation</i> <i>Commercial</i> <i>Domestic Irrigation</i> <i>Industrial</i> <i>Institutional</i> <i>Livestock</i> <i>Municipal</i> <i>No Information</i> <i>Other</i> <i>Power Generation</i> <i>Recreational</i> <i>Sanitary Domestic</i>						
	Width	1	-999999	REAL	Metre	0
The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
allowed values: -999999						
Water Resource Information : Temperature	1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
allowed values: -999999						
Terrain Gap Width	1	-999999	REAL	Metre	0	The minimum horizontal bridging distance necessary to cross a channel. [Description] The width is measured perpendicular to the direction of water flow from bank to bank, at the first usable break in slope on each side of the channel above mean high water. Usable banks are those accessible by vehicles; small unusable ledges and cliffs are not considered usable breaks in slopes.
allowed values: -999999						
Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.
allowed values: -999999						
Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units		The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
allowed values: -999999						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

<i>allowed values:</i> No Information						
Volume	1	-999999	REAL	Cubic Metre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<i>allowed values:</i> -999999						
New Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime		The electrical conductivity of water.
<i>allowed values:</i> -999999						
New Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre		The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
<i>allowed values:</i> -999999						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless		The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable No Information Treatable Nonpotable Other						
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Seawater Brackish No Information Brine Not Applicable Fresh Saline						
New Water Resource Information : Water Use	1	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional Other Commercial Livestock Power Generation Domestic Irrigation Municipal Recreational Industrial No Information Sanitary Domestic						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature MobileHomePark (Area 00)New ☐ Mobile Home Park

A site for the permanent parking of mobile homes used as dwellings and designed without a permanent foundation. [Description] Mobile homes are prefabricated homes built in factories, rather than on-site, and then taken to the place where they will be occupied. They are usually transported by tractor-trailers over public roads to sites which are often in rural areas or high-density developments. While these houses are usually placed in one location and left there permanently, they do retain the ability to be moved as this is a requirement in many areas. Behind the cosmetic work fitted at installation to hide the base, there are strong trailer frames, axles, wheels and tow-hitches.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						

Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i>	-999999					
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i>	No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational <i>Operational</i>	
New Feature Code	1	AI021	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i>	AI021					
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i>	Convenience Store No Information Recreation		Food Service Other Residence		Grocery Petrol Sale Restaurant Laundry Place of Worship Restroom	
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i>	No Information					
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i>	-999999					
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i>	-999999					
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i>	-999999					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i>	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i>	No Information					
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i>	False		No Information		True	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i>	Damaged No Information Unmaintained		Destroyed Ruined		Dismantled Site Preparation Intact Under Construction	
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i>	U					

Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

[Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). Feature MotorVehicleStation (Area 00)

New ☐ Motor Vehicle Station

A building at, or in which, motor vehicles are refuelled, serviced, and sometimes repaired. [Description] Usually accompanied by several prominently placed petrol pumps.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<u>allowed values:</u> No Information						
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<u>allowed values:</u> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<u>allowed values:</u> Civilian National State			International No Information			Joint Military and Civilian Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<u>allowed values:</u> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AQ170	CONSTRAINED_ STRING	Unitless	5	Feature Code
<u>allowed values:</u> AQ170						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<u>allowed values:</u> Convenience Store Petrol Sale			Motor Vehicle Repair Restroom			No Information Other

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i> Accurate			Approximate			Doubtful No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. Feature MountainPass (Point 00)New ☐ Mountain Pass**A narrow route through a mountainous region or over a mountain range.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Feature Code	1	DB150	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> DB150						

Geographic Name Information : Full Name		1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information							
Highest Elevation		1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999							
Length		1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999							
Note : Memorandum		1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information							
Geographic Name Information : Name Identifier		1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information							
Restriction Information : Security Attributes Group (resource classification)		1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U							
Process Step Information : Resource Content Originator		1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<i>allowed values:</i>

Feature MunitionStorageFacility (Area 00)New ☐ Munition Storage Facility

A facility for the storage of munitions (for example: bombs, missiles, warheads, mines or ammunition). [Description] Specifically, storage of weapons charged with: explosives; propellant; pyrotechnics; initiating composition; or nuclear, chemical, or biological material for use in military operations. Facilities may range in size from a small stockpile of munitions (sometimes termed an 'ammo dump') that may be reverted to a large perimeter-controlled site with multiple dispersed bunkers laid out to minimize the effect of accidental detonation (sometimes termed a 'munitions depot').

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).

Feature NamedLocation (Area 00)New ☐ Named Location

A location that normally does not appear as a specific, characterized object but that has a name that is required to be displayed in association with that location. [Description] For example, the name of the Alps or the Sahara.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
New Feature Code	1	ZD040	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> ZD040						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Named Location Type	1	No Information	Enumeration	Unitless	0	The type of a location that normally does not appear as a specific, characterized object but that has a name that is required to be displayed in association with that location.
<u>allowed values:</u> Arctic Land Other			Area Populated Locality			Locality Region No Information
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature NaturalPool (Area 00)

New ☐ Natural Pool

A naturally formed pool of water. [Description] It is usually fed by surface drainage from the surrounding region and/or water arising from an underground source (for example: a spring or a resurgence).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
New Water Resource Information : Aquifer Name	1	No Information	String	Unitless	200	The common or scientific name of an aquifer.

	<u>allowed values:</u> No Information					
	<u>allowed values:</u> No Information					
	Area	1	-999999	REAL	Square Metre	0 The area within the delineation of the feature.
	<u>allowed values:</u> -999999					
New	Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0 The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
	<u>allowed values:</u> -999999					
New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0 The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<u>allowed values:</u> -999999					
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0 The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<u>allowed values:</u> -999999					
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0 The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<u>allowed values:</u> -999999					
New	Deepest Depth Below Surface Level	1	-999999	Real	Metre	The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
	<u>allowed values:</u> -999999					
	Direction of Flow	1	-999999	REAL	Arc Degree	0 The bearing of movement or direction of the flow.
	<u>allowed values:</u> -999999					
	Facility Operational Status	1	No Information	Enumeration	Unitless	The status of operation of a facility, as a whole.
	<u>allowed values:</u> No Information			Non-operational		Not in Operation
	Partially Operational			Planned		Temporarily Non-operational
New	Feature Code	1	BH170	CONSTRAINED_STRING	Unitless	5 Feature Code
	<u>allowed values:</u> BH170					
	Geographic Name Information : Full Name	2	No Information	String	Unitless	200 A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information					
	Geographic Name Type	2	No Information	Enumeration	Unitless	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional			Historical Transliterated		Native Transliterated
	Other			Provisional		Unverified Transliterated
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0 The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<u>allowed values:</u> Dry			Intermittent		No Information
	Length	1	-999999	REAL	Metre	0 The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999					
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0 The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<u>allowed values:</u> -999999					

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i> No Information							
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i> No Information							
Natural Pool Type	1	No Information	Enumeration	Unitless	0	The type of a natural pool, generally based on its origin.	
<i>allowed values:</i> Artesian Spring			No Information Walled-in Spring	Other		Resurgence	
New Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.	
<i>allowed values:</i> -999999							
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.	
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined	Dismantled Site Preparation		Intact Under Construction	
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
<i>allowed values:</i> U							
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.	
<i>allowed values:</i> No Information							
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.	
<i>allowed values:</i> No Information							

	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
	<i>allowed values:</i> No Information						
New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<i>allowed values:</i> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<i>allowed values:</i> No Information						
	Volume	1	-999999	REAL	Cubic Metre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i> -999999						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i> Contaminated Potable			No Information Treatable			Nonpotable Other
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
	<i>allowed values:</i> Alkaline Mineral Seawater			Brackish No Information			Brine Not Applicable Fresh Saline
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
	<i>allowed values:</i> Agricultural Irrigation Institutional Other			Commercial Livestock Power Generation			Domestic Irrigation Municipal Recreational Industrial No Information Sanitary Domestic

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature NaturalPool (Point 00)

New ☐ Natural Pool

A naturally formed pool of water. [Description] It is usually fed by surface drainage from the surrounding region and/or water arising from an underground source (for example: a spring or a resurgence).

	Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
New	Aquifer Name	1	No Information	String	Unitless	2E+09	The common or scientific name of an aquifer.
	<i>allowed values:</i> No Information						
	<i>allowed values:</i> No Information						
	Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999						
New	Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
	<i>allowed values:</i> -999999						
	Direction of Flow	1	-999999	REAL	Arc Degree	0	The bearing of movement or direction of the flow.
	<i>allowed values:</i> -999999						
	Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
	<i>allowed values:</i> No Information			Non-operational			Not in Operation
	<i>Partially Operational</i>			Planned			Temporarily Non-operational
New	Feature Code	1	BH170	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BH170						

Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Geographic Name Type	2	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Other			Historical Transliterated Provisional			Native Transliterated Unverified Transliterated No Information Variant Transliterated
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry			Intermittent			No Information Perennial
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
New Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Natural Pool Type	1	No Information	Enumeration	Unitless	0	The type of a natural pool, generally based on its origin.
<i>allowed values:</i> Artesian Spring			No Information Walled-in Spring			Other Resurgence
New Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature NonBuildingStructure (Area 00)

New ☐ Non-building Structure

A free-standing self-supporting construction (for example: a large piece of equipment) designed to support human activities (for example: agriculture, manufacturing, or mining) but not intended for human occupancy and/or habitation (for example: a house, a bank, an office, or a stadium). [Description] May have only limited protection from the weather (for example: a hayrick) and often composed of components specialized for a particular activity (for example: animal feeding, material storage, or traffic control) or process (for example: chemical reaction, heating, mixing, or physical shaping). For example, a cane press, a cement mill, a cotton gin, a distillation tower, and a rock crusher.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False						No Information True
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.

<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Manufacturing Information : By-product	3	No Information	Enumeration	Unitless	0	The principal by-product(s) of a production, mining, or agricultural activity. [Description] If multiple by-products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Ash Other Sewage Cinders Radioactive Material Slag No Byproduct Refuse No Information Scrap-metal						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National State International No Information Joint Military and Civilian Other Military Private						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational						
New Feature Code	1	AL014	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL014						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i> Accurate Approximate Doubtful No Information						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False No Information True						

New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.

allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
allowed values:	No Information					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
allowed values:	-999999

Feature NonBuildingStructure (Point 00)New ☐ Non-building Structure

A free-standing self-supporting construction (for example: a large piece of equipment) designed to support human activities (for example: agriculture, manufacturing, or mining) but not intended for human occupancy and/or habitation (for example: a house, a bank, an office, or a stadium). [Description] May have only limited protection from the weather (for example: a hayrick) and often composed of components specialized for a particular activity (for example: animal feeding, material storage, or traffic control) or process (for example: chemical reaction, heating, mixing, or physical shaping). For example, a cane press, a cement mill, a cotton gin, a distillation tower, and a rock crusher.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> <i>False</i>			<i>No Information</i>			<i>True</i>
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> <i>-999999</i>						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> <i>-999999</i>						
Manufacturing Information : By-product	3	No Information	Enumeration	Unitless	0	The principal by-product(s) of a production, mining, or agricultural activity. [Description] If multiple by-products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Ash Other Sewage			Cinders Radioactive Material Slag			No Byproduct Refuse No Information Scrap-metal
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National State			International No Information			Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information <i>Partially Operational</i>			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AL014	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> <i>AL014</i>						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> <i>-999999</i>						

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i> Accurate			Approximate			Doubtful
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged			Destroyed			Dismantled
No Information			Ruined			Intact
Unmaintained						Site Preparation
						Under Construction
Manufacturing Information : Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Aircraft			Aluminum			Ammunition

Feature NonSpatialMdEntCollect (Area 00)New ☐ Non-spatial Metadata Entity Collection

A resource that collects instances of one or more modeling entities that share common source(s) and processing step(s) as the basis for their digital non-spatial representation. [Description] The modeling entity specifies metadata regarding the type(s) of data that were used to define the digital representation of the non-spatial component(s) of the entity collection. For example, an existing vertical obstruction dataset may be used to populate accurate height or material type attributes, or a land navigation dataset may be used to populate accurate road width, clearance, and/or surface composition attributes.

Feature NonWaterWell (Point 00)

New ☐ Non-water Well

A shaft sunk into the ground to reach and tap a supply of liquids and/or gases other than water intended for use in agriculture or domestic consumption. [Description] Typically drilled to tap underground reservoirs of hydrocarbons (for example: petroleum or natural gas). May also, for example, yield geothermally heated liquids for use in power generation or heating, or brine for use in the extraction of salt.

Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AA054	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AA054						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Brine Hydrothermal Fluid Other			Coalbed Methane Liquefied Petroleum Gas (LPG) Petroleum			Gas Natural Gas Condensate Helium No Information
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Rig Present	1	No Information	Boolean	Unitless	0	An indication that a rig is present. [Description] A rig is a superstructure fitted for drilling or lifting operations for extraction and/or exploitation of natural resources.
<i>allowed values:</i> False			No Information			True
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i>	No Information					
Well Equipment	3	No Information	Enumeration	Unitless	0	The type(s) of equipment attached to or adjacent to a wellbore. [Description] A wellbore is the openhole or uncased portion of a well.
<i>allowed values:</i>	Capped Other Separator		Christmas Tree Protective Structure Stock Tank		Manifold Pump Treater	No Information Rod Pump Wellhead
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						

Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i> Conical Other			Domed Pitched			Flat Sawtoothed No Information Semi-cylindrical
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Concrete Reinforced Concrete			No Information Steel			Other Prestressed Concrete
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
<i>allowed values:</i> No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature OfficePark (Area 00)

New ☐ Office Park

A commercial facility consisting of multiple office buildings tenanted by one or more non-retail businesses (for example: corporate management, consulting services, or research and development) and supportive businesses (for example: a restaurant serving mid-day meals or a post office) that share a common park-like setting consisting of landscaping (for example: lawns, ornamental plantings, or ponds), parking facilities, and common entrances from adjacent roads. [Description] May also include commercial tenants involved in light industry (for example: gem cutting or specialized electronics manufacture).

Geographic Name Information : Full Name 1 No Information String Unitless 200 A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.

allowed values: No Information

Height Above Surface Level 1 -999999 REAL Metre 0 The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.

allowed values: -999999

Highest Elevation 1 -999999 REAL Metre 0 The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.

allowed values: -999999

Length 1 -999999 REAL Metre 0 The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

allowed values: -999999

Note : Memorandum 1 No Information String Unitless 2E+09 A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.

allowed values: No Information

Geographic Name Information : Name Identifier 1 No Information String Unitless 18 The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.

allowed values: No Information

Navigation Landmark 1 No Information Boolean Unitless 0 An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.

allowed values: False

No Information

True

New Physical Condition 1 No Information Enumeration Unitless 0 The physical state of a structure, or site, as a whole.

allowed values: Damaged
No Information
Unmaintained

Destroyed
Ruined

Dismantled
Site Preparation

Intact
Under Construction

Manufacturing Information : Product 3 No Information Enumeration Unitless 0 The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.

allowed values:	Aircraft Biochemical Chemical Coke Cotton Electronic Equipment Fluorine Gas Ice Liquefied Natural Gas (LNG) Metal Munitions <i>Not Applicable</i> Paper Petroleum and/or Natural Gas Prestressed Concrete Salt Steel Uranium Wine	Aluminum Biodiesel Clothing Concrete Desalinated Water Explosive Food Glass Iron Liquefied Petroleum Gas (LPG) Milk <i>No Information</i> Nuclear Fuel Petrochemical Petroleum Lubricant Radioactive Material Sewage Sugar Vegetation Product Zinc	Ammunition Brick Coal Consumer Goods Electric Power Fertilizer Frozen Water Gold Lead Lumber Milled Grain No Product Olive Oil Petrol Phosphorus Rice Silver Textile Water	Asphalt Cement Coffee Copper Electrical Equipment Fish Fruit Heating Steam and/or Water Lime Manganese Motor Vehicle Non-solid Hydrocarbon Fuel <i>Other</i> Petroleum Plastic Rubber Snow Tobacco Whale Products		
Manufacturing Information : Raw Material	3	No Information	Enumeration	Unitless	0	The principal 'raw', or input, material(s) involved in a production activity. [Description] If multiple 'raw' materials are specified then they are usually listed in descending order of importance.
allowed values:	Aluminum Chemical Copper Gold Lumber No Raw Material Paper Radioactive Material Snow Tobacco Wood	Asphalt Clay Cotton Ice Manganese Oil Petroleum and/or Natural Gas Rubber Steel Uranium Zinc	Bauxite Coal Gas Iron Metal Ore Plant Material Sewage Sugar Vegetation	Cement Coke Glass Lead <i>No Information</i> <i>Other</i> Plastic Silver Textile Water		
Religious Information : Religious Designation	1	No Information	Enumeration	Unitless	0	A designation denoting a religion or system of belief.

Religious Information : Religious Facility Type	1	No Information	Enumeration	Unitless	0	The type of a facility, building, structure or site that is designed and designated to be used for religious activities, based on its structure and/or the principal activity for which it was designed.
allowed values:	Burial Site Convent Mission Noviciate Retreat Synagogue	Cathedral Hermitage Monastery <i>Other</i> Seminary Tabernacle	Chapel Marabout Mosque Pagoda Shrine Temple	Church Minaret <i>No Information</i> Religious Community Stupa		
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values:	<i>U</i>					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
allowed values:	-999999					
Wireless Telecommunication Information : Wireless Telecommunication Type	1	No Information	Enumeration	Unitless	0	The type of a wireless telecommunication service based on the mechanism(s) of transmission and/or the nature of the communication(s) supported. [Description] For example, radio broadcast or mobile phone service.
allowed values:	Cellular Phone Other Television (TV)		Microwave Radio Relay Radio Broadcast			Mobile Phone Radio Telephone No Information Radio-telegraph

Feature OffshoreConstruction (Area 00)New ☐ Offshore Construction

An artificial structure that is located offshore. [Description] It usually has a surface that is raised above the sea and may be used as a working stage for conducting offshore operations (for example: drilling for petroleum and/or natural gas, loading and/or unloading vessels, or navigation support).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> <i>False</i>			<i>No Information</i>			<i>True</i>
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> <i>-999999</i>						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> <i>-999999</i>						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International <i>No Information</i> State			Joint Military and Civilian <i>Other</i> Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> <i>No Information</i> <i>Partially Operational</i>			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	BD115	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> <i>BD115</i>						
Fog Signal Type	1	No Information	Enumeration	Unitless		The type of a fog signal based on its signal characteristics and method of generation.
<i>allowed values:</i> Bell Horn <i>Other</i>			Diaphone <i>No Information</i> Reed			Explosive None Siren Gong <i>Not Applicable</i> Whistle
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> <i>No Information</i>						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> <i>-999999</i>						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> <i>-999999</i>						

Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Hydrographic Vertical Positioning Information : Maritime Navigation Marked	1	No Information	Boolean	Unitless	0	An indication that a feature is significant to maritime safety of navigation and is marked (for example: by a light or beacon) by a maritime-specific navigational aid. [Description] Mariners may also use other prominent features (for example: rotating aeronautical beacons or lighted structures) for informal navigational purposes.
<i>allowed values:</i> FALSE			No Information			TRUE
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Navigation System Type	3	No Information	Enumeration	Unitless		The type(s) of equipment or system used in electronic navigation.
<i>allowed values:</i> No Information Radar Responder Beacon (RACON)			None		Other	Radar Marker (RAMARK)
Offshore Construction Primary Structure	1	No Information	Enumeration	Unitless	0	The type of primary structure of an offshore construction upon which various pieces of operation-specific equipment are affixed.
<i>allowed values:</i> Barge Platform Vessel			Catenary Turntable Submerged Platform		No Information Submerged Turret	Other Terminal Buoy
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature Orchard (Area 00) New ☐ Orchard

A tract covered by systematic plantings of trees that yield fruits (including nuts).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Canopy Cover	1	-999999	REAL	Percent	0	The fraction of canopy cover within a defined area during the season of maximum foliage. [Description] The canopy is formed by the upper branches of the trees in a forest forming a more or less continuous layer.
<i>allowed values:</i> -999999						
Crop Information : Crop Species	3	No Information	Enumeration	Unitless	0	The predominant species of a crop land.
<i>allowed values:</i> Almond Chestnut Fruit Tree Olive Peach			Apple Citrus Hazelnut Ornamental Crop Walnut			Berry Coconut Maple Other Carob Date No Information Palmetto
Crop Information : Farming Pattern	3	No Information	Enumeration	Unitless	0	The general arrangement(s) and/or pattern(s) of farming fields.
<i>allowed values:</i> Intermingled Trees No Information Treeless			Intermingled Woods Other Trellised			Irregular Regular Linear Terraced
New Feature Code	1	EA040	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> EA040						
Foliage Type	1	No Information	Enumeration	Unitless	0	The predominant foliage type of the vegetation.
<i>allowed values:</i> Deciduous Other			Evergreen			Mixed No Information
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Crop Information : Irrigation Method	1	No Information	Enumeration	Unitless	0	The method used to supply crops with water.

<i>allowed values:</i>	Center Pivot Other		Furrow Overhead			Linear Move	No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<i>allowed values:</i>	-999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i>	No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i>	No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.	
<i>allowed values:</i>	False		No Information			True	
Predominant Vegetation Height	1	-999999	REAL	Metre	0	The predominant height (the height of at least 50 percent) of the vegetation.	
<i>allowed values:</i>	-999999						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
<i>allowed values:</i>	U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.	
<i>allowed values:</i>	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)			
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.	
<i>allowed values:</i>	No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.	

allowed values: No Information

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
----------------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Stem Diameter	1	[-999999, -999999]	REAL_Interval	Metre	0	The average diameter of the tree trunks in an area, measured at a height of approximately 1.5 metres or 4.5 feet on the high side (if on a hillside) above the surface of the ground. [Description] Commonly referred to as the 'diameter at breast height' (dbh). For trees up to 2 metres high, the stem diameter is measured at the mid-point between the ground and the stem tip.
---------------	---	--------------------	---------------	-------	---	---

allowed values: [-999999, -999999]
 Greater-than to Less-than-or-equal Interval
 Open Interval

Closed Interval
 Greater-than-or-equal to Less-than Interval

Greater-than or Equal Semi-interval
 Less-than or Equal Semi-interval

Greater-than Semi-interval
 Less-than Semi-interval

Tree Spacing	1	[-999999, -999999]	REAL_Interval	Metre	0	The average tree spacing between trees in a stand, determined from centre to centre of adjacent trees.
--------------	---	--------------------	---------------	-------	---	--

allowed values: [-999999, -999999]
 Greater-than to Less-than-or-equal Interval
 Open Interval

Closed Interval
 Greater-than-or-equal to Less-than Interval

Greater-than or Equal Semi-interval
 Less-than or Equal Semi-interval

Greater-than Semi-interval
 Less-than Semi-interval

Undergrowth Density	1	[-999999, -999999]	REAL_Interval	Percent	0	The fraction of land within a defined area that is covered by undergrowth (for example: scrub, brush, and/or bush).
---------------------	---	--------------------	---------------	---------	---	---

allowed values: [-999999, -999999]

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Vegetation Trafficability Impact	1	[-999999, -999999]	Real_Interval	Percent		The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
----------------------------------	---	--------------------	---------------	---------	--	---

allowed values: [-999999, -999999]

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Thickness	1	-999999	REAL	Metre	0	The distance between the two opposite surfaces of an object, usually the distance of smallest measure. [Description] The third dimension of an object, distinct from length and width (breadth).
allowed values: -999999						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
allowed values: No Information

Feature OutdoorTheatreScreen (Point 00)

New ☐ Outdoor Theatre Screen

A large outdoor screen for showing motion pictures.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
-----------	-------------	---------	-----------	-------	--------	----------------------

Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<u>allowed values:</u> <i>False</i>			No Information			<i>True</i>
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<u>allowed values:</u> <i>-999999</i>						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> <i>-999999</i>						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<u>allowed values:</u> <i>No Information</i> <i>Partially Operational</i>			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AK080	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> <i>AK080</i>						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> <i>No Information</i>						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> <i>-999999</i>						
Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<u>allowed values:</u> <i>-999999</i>						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> <i>-999999</i>						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> <i>-999999</i>						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> <i>No Information</i>						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> <i>No Information</i>						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.

Overhead Clearance	1	-999999	REAL	Metre	0	The least distance between the travelled way and any obstruction vertically above it. [Description] Reference STANAG 2253.
<i>allowed values:</i> -999999						
Overhead Obstruction Type	1	No Information	Enumeration	Unitless	0	The type of an overhead obstruction based on its shape, structure and/or intended use.

New	allowed values:	Arcade Building Conveyor Memorial Monument Overhead Walkway Railway Power Line Traffic Sign	Arch Bridge Span Building Overhang Entrance and/or Exit No Information Parking Garage Roof Transportation Block	Bridge Span Cable Frame Bridge Span Non-building Structure Pipeline Route-related Structure Transportation Route Protection Structure	Bridge Superstructure Cableway Gantry Other Pipeline Crossing Point Scaffold Tunnel		
	Physical Condition	1	No Information	Enumeration	Unitless	The physical state of a structure, or site, as a whole.	
	allowed values:	Damaged No Information Unmaintained	Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction	
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	allowed values:	U					
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
	allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
	allowed values:	No Information					
	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
	allowed values:	No Information					
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
	allowed values:	No Information					
	Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
	allowed values:	Canal Pedestrian	Inland Waterway Railway		No Information Road		Other

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature PackIce (Area 00)

New ☐ Pack Ice

Term used in a wide sense to include any area of sea ice other than fast ice. [Description] Pack ice commonly consists of connected floating plates of ice and has a mosaic look. Fast ice is defined as sea ice which remains fast, generally in the position where originally formed, and which may attain a considerable thickness. Fast ice is found along coasts, where it is attached to the shore, or over shoals, where it may be held in position by islands, grounded icebergs, or grounded polar ice.

New Feature Code	1	AK120	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AK120						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Location Referenced to Shoreline	1	No Information	Enumeration	Unitless	0	The location of an object in relation to a land water boundary.
<i>allowed values:</i> At Shoreline			Inland			No Information Offshore
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<i>allowed values:</i>	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature ParkingGarage (Area 00)

New ☐ Parking Garage

A designated, multi-level, structure used for parking and/or storing vehicles. [Description] May be present as part of a building or as a separate structure.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National State			International No Information			Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AQ141	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AQ141						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Emergency Operations Motor Vehicle Repair Road Transport			Meeting Place No Information Stop			Motor Vehicle Parking Other Warehousing and Storage Motor Vehicle Rental Petrol Sale
Floor Count	1	-999999	REAL	Unitless	0	The number of floors in a structure (for example: a building).
<i>allowed values:</i> -999999						

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i> Accurate			Approximate			Doubtful No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
<i>allowed values:</i> False			No Information			True
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.

Specified Domain Values(s)		1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information							
Unique Entity Identifier		1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information							
Vertical Obstruction Identifier		1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
allowed values: No Information							
Width		1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
allowed values: -999999

Feature ParticleAccelerator (Area 00)New ☐ Particle Accelerator**An apparatus for imparting high velocities to charged particles.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational						
			Non-operational Planned			Not in Operation Temporarily Non-operational
New Feature Code	1	AL140	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL140						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False						
			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained						
			Destroyed Ruined			Dismantled Site Preparation

Feature Penstock (Line 00)

New ☐ Penstock

A pipeline that is used by hydroelectric plants to transport water by gravity from a reservoir to the turbine(s).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Diameter	1	-999999	REAL	Metre	0	The measure of a straight line segment passing through the center of a figure, especially of a circle, sphere or cross-section of a cylinder, terminating at the periphery.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	BH110	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BH110						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

<hr/>						
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<hr/>						
allowed values:	No Information					
<hr/>						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<hr/>						
allowed values:	No Information					
<hr/>						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<hr/>						
allowed values:	No Information					
<hr/>						
Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
<hr/>						
allowed values:	False		No Information		True	
<hr/>						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<hr/>						
allowed values:	No Information					
<hr/>						
Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
<hr/>						
allowed values:	Above Surface		Below Ground Surface		No Information On Surface

Feature PicnicSite (Area 00)

New ☐ Picnic Site

A site that has been set aside for picnics. [Description] It may have picnic tables for public use.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<u>allowed values:</u> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AK061	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> AK061						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False			No Information			True

Feature Pipeline (Line 00)

New ☐ Pipeline**A connected set of pipes for conveying liquids, slurries, or gases. [Description] Usually for long distances and often located underground.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999, -999999]			No Information			
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999						
Contained within Tunnel	1	No Information	Boolean	Unitless	0	The object is at least partially located within, or passes through, a tunnel. [Description] For example, a canal passing through a tunnel.
<i>allowed values:</i> False			No Information			True
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999						
Deck Level	1	-999999	REAL	Unitless	0	The relative level of a deck within a set of vertically stacked decks, one over another, in a transportation structure (for example: on a bridge or in a tunnel). [Description] The lowest deck is numbered '1' and the remaining decks are numbered in ascending order (bottom to top) with the uppermost deck being assigned the highest value.
<i>allowed values:</i> -999999						
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values:</i> -999999						
New Diameter	1	-999999	REAL	Metre	0	The measure of a straight line segment passing through the center of a figure, especially of a circle, sphere or cross-section of a cylinder, terminating at the periphery.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AQ113	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AQ113						
Floating	1	No Information	Boolean	Unitless	0	An indication that an object is floating.
<i>allowed values:</i> False			No Information			True
Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.

<u>allowed values:</u> No Information						
Geographic Name Type	3	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<u>allowed values:</u> Conventional Other						
			Historical Transliterated Provisional		Native Transliterated Unverified Transliterated	No Information Variant Transliterated
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<u>allowed values:</u> Accurate						
			Approximate		Doubtful	No Information
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<u>allowed values:</u> -999999						
New Least Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Linear Feature Arrangement	1	No Information	Enumeration	Unitless	0	The arrangement of parallel linear features on a single support structure including both directions (if applicable). [Description] For example, two railways sharing a single roadbed.
<u>allowed values:</u> Double Arrangement Other						
			Juxtaposition Single Arrangement		Multiple Arrangements	No Information
New Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False						
			No Information		True	
Parallel Line Count	1	-999999	REAL	Unitless	0	The total number of nominally parallel lines within the feature.
<u>allowed values:</u> -999999						

New	Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.		
	<i>allowed values:</i>	-999999							
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.		
	<i>allowed values:</i>	Damaged No Information Unmaintained		Destroyed Ruined		Dismantled Site Preparation		Intact Under Construction	
	Pipeline Type	1	No Information	Enumeration	Unitless	0	The type of a pipeline or pipeline-associated equipment based on structure and/or intended use(s).		
	<i>allowed values:</i>	Intake Pipe Transport Pipe		No Information		Other		Outfall Pipe	
	Predominant Average Water Velocity	1	[-999999,-999999]	REAL_INTERVAL	Metres per Second	0	The average water velocity, exclusive of high water due to runoff or low water due to drought.		
	<i>allowed values:</i>	(1.5, INFINITY)		(-INFINITY, 1.5]		[-999999,-999999]			
	Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.		
	<i>allowed values:</i>	Chemical Other Water		Gas Petrol		Heating Steam and/or Water Petroleum		No Information Sewage	
New	Water Resource Information : Pump Type	1	No Information	Enumeration	Unitless		The type of pump used to move liquid or semi-liquid material from one location to another.		
	<i>allowed values:</i>	Airlift No Information Turbine		Centrifugal Other Vacuum		Gravity Reciprocating		Jet Rotary	
	Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).		
	<i>allowed values:</i>	Depressed		Level		No Information		Raised	
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.		
	<i>allowed values:</i>	U							
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.		
	<i>allowed values:</i>	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)		Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)	

	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
	<i>allowed values:</i> No Information						
	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
	<i>allowed values:</i> No Information						
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
	<i>allowed values:</i> No Information						
	Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
	<i>allowed values:</i> Aluminum Lead Other Steel			Concrete Masonry Plastic Wood			Copper Metal Prestressed Concrete Iron No Information Reinforced Concrete
New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
	<i>allowed values:</i> -999999						
	Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
	<i>allowed values:</i> False			No Information			True
	Supported by Bridge Span	1	No Information	Boolean	Unitless	0	The object is at least partially supported by, or passes across, a bridge span. [Description] For example, an aqueduct carried across a valley by one or more bridge spans.
	<i>allowed values:</i> False			No Information			True
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<i>allowed values:</i> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<i>allowed values:</i> No Information						
	Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
	<i>allowed values:</i> Above Surface No Information			Above Waterbody Bottom On Surface			Below Ground Surface On Waterbody Bottom Below Waterbody Bottom
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
	<i>allowed values:</i> -999999						

New	Water Resource Information : Water Flow	1	-999999	Real	Litres per Minute		The rate of water flow through or exiting from a feature.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i> -999999						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i> Contaminated No Information Other Treatable						
New	Water Resource Information : Water Pump Accessibility	1	No Information	Enumeration	Unitless	0	The approachable or easily entered side of a water source where portable equipment including pumps and pipes may be placed into the water source and used with nearby portable equipment. [Description] Provides an indication of whether it is possible access the water for the purpose of connecting portable water pumping equipment to temporary purification units. Accessibility must meet distance requirements in the transport of water: 100 m horizontal and 10 m vertical.
	<i>allowed values:</i> From All Sides From Right No Information From East From South From Left From West From North No Accessibility						
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
	<i>allowed values:</i> Alkaline No Information Brackish Other Fresh Saline Mineral						
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
	<i>allowed values:</i> Agricultural Irrigation Institutional Other Commercial Livestock Power Generation Domestic Irrigation Municipal Recreational Industrial No Information Sanitary Domestic						
	Waterbody Overhead Obstruction	1	No Information	Boolean	Unitless	0	An indication that an object is an overhead obstruction over a navigable waterbody.
	<i>allowed values:</i> False No Information True

Feature PipelineCrossingPoint (Point 00) New ☐ Pipeline Crossing Point

A traversable site extending across a pipeline that acts as a passageway for cross-country movement of vehicles or troops.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
	<i>allowed values:</i> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational					
New Feature Code	1	AL165	CONSTRAINED_STRING	Unitless	5	Feature Code

<i>allowed values:</i> AL165						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained Destroyed Ruined Dismantled Site Preparation Intact Under Construction						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature PolarIce (Area 00)

New ☐ Polar Ice

Sea ice that is more than one year old and more than 3 metres thick. [Description] Sea ice is any form of ice which has originated from sea water.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999						
New Feature Code	1	BJ080	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> BJ080						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999						

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Predominant Feature Height	1	-999999	REAL	Metre	0	The predominant height (the height of at least 50 percent) of the feature measured from the lowest point of the base at ground or water level (downhill side/downstream side).
<u>allowed values:</u> -999999						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<u>allowed values:</u> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.

allowed values: No Information

Seasonal Ice Limit	1	No Information	String	Unitless	14	The month of the seasonal limit of the presence of ice that poses a hazard to maritime traffic. [Description] Used to specify the month for which an ice limit line is determined; hazardous ice may be present up to the polar side of the ice limit line.
--------------------	---	----------------	--------	----------	----	---

allowed values: No Information

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
----------------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Geographic Name Information : Full Name		1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> <i>No Information</i>							
Height Above Surface Level		1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> <i>-999999</i>							
Highest Elevation		1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> <i>-999999</i>							
Length		1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> <i>-999999</i>							
Note : Memorandum		1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> <i>No Information</i>							
Geographic Name Information : Name Identifier		1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> <i>No Information</i>							
Navigation Landmark		1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> <i>False</i>				<i>No Information</i>			<i>True</i>
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
-------	---	---------	------	-------	---	--

allowed values: -999999

World Port Index Identifier	1	No Information	String	Unitless	14	The unique identifier element in the NGA World Port Index (Publication 150). [Description] The World Port Index lists all of the major shipping ports in the world, giving all the information (for example: latitude and longitude, facilities information, tidal data, and customs information) that a ship captain might need to prepare for a visit.

Feature PowerSubstation (Area 00)

New ☐ Power Substation

A facility, along a power transmission line, in which electric current is switched, transformed, and/or converted.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<u>allowed values:</u> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<u>allowed values:</u> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AD030	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> AD030						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.

allowed values: -999999

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information		True	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<u>allowed values:</u> No Information						

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature PreparedWatercourseCross (Point 00)

New ☐ Prepared Watercourse Crossing

A location on a watercourse that has ramps, structural piles, and/or piers constructed on one or both shores to allow for suitable future crossing operations using floating bridges or rafting equipment. [Description] For example, a prepared float bridge site or a prepared raft site.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.

<u>allowed values:</u> AQ111						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999						
Horizontal Clearance	1	-999999	REAL	Metre	0	The distance available to pass a load that extends laterally beyond the wheels of a vehicle.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature PumpingStation (Area 00)

New ☐ Pumping Station

A facility to move solids, liquids or gases by means of pressure or suction.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999, -999999]			No Information			
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Military Other Private
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN ⁻ . These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999						
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values:</i> -999999						

New	Water Resource Information : Device Power Type	1	No Information	Enumeration	Unitless	0	The method by the device is powered, if any.
	<i>allowed values:</i>						<i>Compressed Air</i> <i>No Information</i> <i>Electricity</i> <i>Other</i> <i>Gravity</i> <i>Petroleum Product</i> <i>Manual</i> <i>Steam</i>
New	Water Resource Information : Device Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the device and the underlying ground (terrain), liquid or waterbody bottom.
	<i>allowed values:</i>						<i>Above Surface</i> <i>On Waterbody Bottom</i> <i>Below Ground Surface</i> <i>Other</i> <i>No Information</i> <i>Submerged</i> <i>On Surface</i>
	Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
	<i>allowed values:</i>						<i>No Information</i> <i>Partially Operational</i> <i>Non-operational</i> <i>Planned</i> <i>Not in Operation</i> <i>Temporarily Non-operational</i> <i>Operational</i>
New	Feature Code	1	AQ116	CONSTRAINED_ STRING	Unitless	5	Feature Code
	<i>allowed values:</i>						<i>AQ116</i>
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
	<i>allowed values:</i>						<i>No Information</i> <i>Pipeline Transport</i> <i>Other</i> <i>Solid Mineral Fuel Mining</i> <i>Petroleum and/or Gas Extraction</i> <i>Utilities</i> <i>Petroleum Refining</i>
	Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i>						<i>No Information</i>
	Geographic Name Type	2	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i>						<i>Conventional</i> <i>Other</i> <i>Historical Transliterated</i> <i>Provisional</i> <i>Native Transliterated</i> <i>Unverified Transliterated</i> <i>No Information</i> <i>Variant Transliterated</i>
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i>						<i>-999999</i>
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i>						<i>-999999</i>
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i>						<i>-999999</i>
	Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
	<i>allowed values:</i>						<i>False</i> <i>No Information</i> <i>True</i>
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<i>allowed values:</i>						<i>-999999</i>
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i>						<i>No Information</i>

Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i>	No Information					
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i>	False					True
New Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i>	-999999					
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i>	Damaged No Information Unmaintained					Destroyed Ruined Dismantled Site Preparation Intact Under Construction
Predominant Average Water Velocity	1	[-999999,-999999]	REAL_INTERVAL	Metres per Second	0	The average water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i>	(1.5, INFINITY)					[-999999,-999999]
Predominant Maximum Water Depth	1	[-999999,-999999]	Real_Interval	Metre	0	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i>	(0.8, 1.6] [-999999,-999999]					(1.6, 2.4] (2.4, INFINITY) (-INFINITY, 0.8]
Predominant Maximum Water Velocity	1	[-999999,-999999]	Real_Interval	Metres per Second	0	The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i>	(0.5, 1.5] [-999999,-999999]					(1.5, 2.5] (2.5, INFINITY) (-INFINITY, 0.5]
Predominant Minimum Water Depth	1	[-999999,-999999]	Real_Interval	Metre	0	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i>	(0.8, 1.6] [-999999,-999999]					(1.6, 2.4] (2.4, INFINITY) (-INFINITY, 0.8]
Predominant Minimum Water Velocity	1	[-999999,-999999]	Real_Interval	Metres per Second	0	The average minimum (seasonal low water) water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i>	(0.5, 1.5] [-999999,-999999]					(1.5, 2.5] (2.5, INFINITY) (-INFINITY, 0.5]
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i>	Chemical Petrol					Gas Petroleum No Information Sewage Other Water
New Water Resource Information : Pump Type	1	No Information	Enumeration	Unitless	0	The type of pump used to move liquid or semi-liquid material from one location to another.
<i>allowed values:</i>	Airlift No Information Turbine					Centrifugal Other Vacuum Gravity Reciprocating Jet Rotary
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i>	U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Volume	1	[-999999,-999999]	Real_Interval	Cubic Metre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
	<i>allowed values:</i>	No Information				
New Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime		The electrical conductivity of water.
	<i>allowed values:</i>	-999999				
New Water Resource Information : Water Flow	1	-999999	Real	Cubic Metres per Second	0	The rate of water flow through or exiting from a feature.
	<i>allowed values:</i>	-999999				
New Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre		The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i>	-999999				
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i>	Contaminated Potable	No Information Treatable	Nonpotable	Other	
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.

Geographic Name Information : Full Name		2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
Geographic Name Type		2	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
		<i>allowed values:</i> Conventional Other		Historical Transliterated Provisional		Native Transliterated Unverified Transliterated	No Information Variant Transliterated
Height Above Surface Level		1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
Highest Elevation		1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
Length		1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
Located Underground		1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
		<i>allowed values:</i> False		No Information		True	
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
Note : Memorandum		1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
Geographic Name Information : Name Identifier		2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
Navigation Landmark		1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
		<i>allowed values:</i> False		No Information		True	
New	Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
Physical Condition		1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
		<i>allowed values:</i> Damaged No Information Unmaintained		Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction
Predominant Average Water Velocity		1	[-999999,-999999]	REAL_INTERVAL	Metres per Second	0	The average water velocity, exclusive of high water due to runoff or low water due to drought.

	allowed values:	(1.5, INFINITY)		(-INFINITY, 1.5]		[-999999,-999999]		
	Predominant Maximum Water Depth	1	[-999999,-999999]	Real_Interval	Metre	0	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.	
	allowed values:	(0.8, 1.6] [-999999,-999999]		(1.6, 2.4]		(2.4, INFINITY)	(-INFINITY, 0.8]	
	Predominant Maximum Water Velocity	1	[-999999,-999999]	Real_Interval	Metres per Second	0	The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.	
	allowed values:	(0.5, 1.5] [-999999,-999999]		(1.5, 2.5]		(2.5, INFINITY)	(-INFINITY, 0.5]	
	Predominant Minimum Water Depth	1	[-999999,-999999]	Real_Interval	Metre	0	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.	
	allowed values:	(0.8, 1.6] [-999999,-999999]		(1.6, 2.4]		(2.4, INFINITY)	(-INFINITY, 0.8]	
	Predominant Minimum Water Velocity	1	[-999999,-999999]	Real_Interval	Metres per Second	0	The average minimum (seasonal low water) water velocity, exclusive of high water due to runoff or low water due to drought.	
	allowed values:	(0.5, 1.5] [-999999,-999999]		(1.5, 2.5]		(2.5, INFINITY)	(-INFINITY, 0.5]	
	Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.	
	allowed values:	Chemical Petrol		Gas Petroleum		No Information Sewage	Other Water	
New	Water Resource Information : Pump Type	1	No Information	Enumeration	Unitless	0	The type of pump used to move liquid or semi-liquid material from one location to another.	
	allowed values:	Airlift No Information Turbine		Centrifugal Other Vacuum		Gravity Reciprocating	Jet Rotary	
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
	allowed values:	U						
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.	
	allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)		Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.	

<u>allowed values:</u> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<u>allowed values:</u> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<u>allowed values:</u> No Information						
New Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
<u>allowed values:</u> -999999						
New Water Resource Information : Temperature	1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<u>allowed values:</u> -999999						
New Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.
<u>allowed values:</u> -999999						
New Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units		The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<u>allowed values:</u> -999999						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<u>allowed values:</u> No Information						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<u>allowed values:</u> Aluminum Masonry Prestressed Concrete Wood			Brick Metal Reinforced Concrete	Concrete No Information Steel	Iron Other Stone	
Volume	1	[-999999,-999999]	Real_Interval	Cubic Metre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<u>allowed values:</u> [-999999,-999999] No Information						
New Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime		The electrical conductivity of water.
<u>allowed values:</u> -999999						
New Water Resource Information : Water Flow	1	-999999	Real	Cubic Metres per Second	0	The rate of water flow through or exiting from a feature.
<u>allowed values:</u> -999999						
New Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre		The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
<u>allowed values:</u> -999999						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.

	allowed values:	Contaminated Potable	No Information Treatable	Nonpotable	Other		
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	The type of available water based on its composition.	
	allowed values:	Alkaline Mineral Saline	Brackish No Information Seawater	Brine Not Applicable	Fresh Other		
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.	
	allowed values:	Agricultural Irrigation Institutional Other	Commercial Livestock Power Generation	Domestic Irrigation Municipal Recreational	Industrial No Information Sanitary Domestic		
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature Pylon (Point 00)

New ☐ Pylon

A pylon or pole used to support one or more cables.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
allowed values:		False	No Information	True		
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values:		-999999				
Cable : Cable Type	3	No Information	Enumeration	Unitless	0	The type of a cable based on its use.
allowed values:		Barrier Guide Power Line Tethering	Communication Line Load Bearing Restraining Towing	Digital Communication Line No Information Telegraph Transmission Line	Fibre-optic Other Telephone	
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
allowed values:		No Information Partially Operational	Non-operational Planned	Not in Operation Temporarily Non-operational	Operational	
New Feature Code	1	AT042	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values:		AT042				

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Pylon Information : Guyed	1	No Information	Boolean	Unitless	0	An indication that an object is guided, secured, or steadied by guy wires.
<i>allowed values:</i> False			No Information			True
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True

Feature QanatShaft (Point 00)New ☐ Qanat Shaft

A vertical shaft that provides access to an underground aqueduct and which is part of a qanat system. [Description] A qanat system consists a system of deep underground tunnels especially constructed to channel water from an uphill region to a dryer lower region for use (for example: a village, a garden, a crop land), and qanat shafts to provide access from the surface to the underground tunnels.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999						
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	BH012	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BH012						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Other			Historical Transliterated Provisional			Native Transliterated Unverified Transliterated No Information Variant Transliterated
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless		The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry Perennial			Ephemeral			Intermittent No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
New Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						

Process Step Information : Resource Content Originator						1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)						1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:						No Information					
Restriction Information : Security Attributes Group (resource owner-producer)						1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:						No Information					
Specified Domain Values(s)						1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:						No Information					
New	Water Resource Information : Sulfate Concentration					1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
allowed values:						-999999					
New	Water Resource Information : Temperature					1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
allowed values:						-999999					
New	Water Resource Information : Total Dissolved Solids					1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.
allowed values:						-999999					
New	Water Resource Information : Turbidity					1	-999999	Real	Nephelometric Turbidity Units		The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
allowed values:						-999999					
Unique Entity Identifier						1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:						No Information					

New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	The electrical conductivity of water.
	<i>allowed values:</i> -999999					
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i> -999999					
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i> Contaminated Potable		No Information Treatable		Nonpotable	Other
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	The type of available water based on its composition.
	<i>allowed values:</i> Alkaline Mineral Saline		Brackish No Information Seawater		Brine Not Applicable	Fresh Other
	Width	1	-999999	REAL	Metre 0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational		Operational
New Feature Code	1	AK130	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i> AK130						

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

<i>allowed values:</i> AT045						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Air Transport No Information			Defence Activities Other			Government Weather Station Maritime Defense
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Military Service Branch	1	No Information	Enumeration	Unitless	0	The branch of the armed forces of a nation. [Description] May also be applied to similar organizations following military discipline (for example: a coastguard).
allowed values: Air Force Marines			Army Navy			Coastguard No Information Joint Other
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values: False			No Information			True
Permanent	1	No Information	Boolean	Unitless	0	An indication that a feature is permanent. [Description] Temporary features last, or are meant to last, for a limited time only.
allowed values: FALSE			No Information			TRUE
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
allowed values: Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Radar Antenna Configuration	1	No Information	Enumeration	Unitless	0	The physical mounting and/or configuration of a radar antenna.
allowed values: Dome Enclosed Radome			Mast Mounted Radome on Tower			No Information Scanner Other Tower Mounted
Radar Station Function	1	No Information	Enumeration	Unitless	0	The primary purpose served by a radar station.
allowed values: Aircraft Flight Tracking General Surveillance Satellite Tracking			Coastal Radar Launch Control Tracking Weather			Early Warning No Information Fire Control Tracking Other
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values: Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)			Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)			Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)
						Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature RadarStation (Point 00)New ☐ Radar Station

A facility utilizing radar to detect and analyze objects (for example: aircraft, artificial satellites, asteroids, and/or missiles) and/or environmental phenomena (for example: tornadoes). [Description] May include both a radar aerial as well as a structure housing radar equipment.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition

Feature **Railway (Line 00)** New ☐ Railway

One or more railway tracks comprising a network that is operated for the conveyance of passengers and/or goods.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Contained within Tunnel	1	No Information	Boolean	Unitless	0	The object is at least partially located within, or passes through, a tunnel. [Description] For example, a canal passing through a tunnel.
<i>allowed values:</i> False			No Information			True
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
Deck Level	1	-999999	REAL	Unitless	0	The relative level of a deck within a set of vertically stacked decks, one over another, in a transportation structure (for example: on a bridge or in a tunnel). [Description] The lowest deck is numbered '1' and the remaining decks are numbered in ascending order (bottom to top) with the uppermost deck being assigned the highest value.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a facility, as a whole.

New Feature Code	1	AN010	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AN010						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i> Accurate			Approximate			Doubtful No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Linear Feature Arrangement	1	No Information	Enumeration	Unitless	0	The arrangement of parallel linear features on a single support structure including both directions (if applicable). [Description] For example, two railways sharing a single roadbed.
<i>allowed values:</i> Double Arrangement Other			Juxtaposition Single Arrangement			Multiple Arrangements No Information
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Railway Class	1	No Information	Enumeration	Unitless	0	The class of a railway based on its importance in the general transportation network.
<i>allowed values:</i> Branch-line Other			High Speed Rail			Main Line No Information
Track Information : Railway Gauge	1	-999999	REAL	Metre	0	The distance between a single pair of rails of a railway, measured along the shortest distance from inside rail to inside rail.
<i>allowed values:</i> -999999						
Track Information : Railway Gauge Classification	1	No Information	Enumeration	Unitless	0	The classification of a railway based on the distance between a single pair of rails, measured along the shortest distance from inside rail to inside rail.
<i>allowed values:</i> Broad			Narrow			No Information Standard
Track Information : Railway in Road	1	No Information	Boolean	Unitless	0	An indication that a railway track is located within the bounds of a roadbed. [Description] For example, an infrequently used railway spur in a roadway or a carline running (regularly) in a roadway.
<i>allowed values:</i> False			No Information			True
Track Information : Railway Power Method	1	No Information	Enumeration	Unitless	0	The method by which electrical power is distributed on a railway, if any.
<i>allowed values:</i> Electrified Track Overhead Electrified			No Information			Non-electrified Other
Railway Use	3	No Information	Enumeration	Unitless	0	The use(s) to which a railway is put as part of a transportation system.
<i>allowed values:</i> Automated Transit System Long-haul Other			Carline Marine Railway Rail Rapid Transit			Funicular Museum Tramway Logging No Information Underground Railway
Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).
<i>allowed values:</i> Depressed Raised			Level			No Information Not Applicable
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) <i>No Information</i> Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)		Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) <i>Other</i> U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)		Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.	
allowed values:	<i>No Information</i>						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.	
allowed values:	<i>No Information</i>						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.	
allowed values:	<i>No Information</i>						
Supported by Bridge Span	1	No Information	Boolean	Unitless	0	The object is at least partially supported by, or passes across, a bridge span. [Description] For example, an aqueduct carried across a valley by one or more bridge spans.	
allowed values:	<i>False</i>		<i>No Information</i>		<i>True</i>		
Surface Slope	1	[-999999, -999999]	REAL_Interval	Percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.	
allowed values:	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval		Greater-than Semi-interval Less-than Semi-interval
Survey Coverage Category	1	No Information	Enumeration	Unitless		A general evaluation of the coverage quality of a survey, as a category. [Description] See possibly accompanying Attribute: 'Position Quality Category' for additional survey-related information.	
allowed values:	<i>No Information</i>						
Track or Lane Count	1	-999999	REAL	Unitless	0	The total number of independent, parallel paths (for example: a railway track and/or a road lane) in both directions within a route.	
allowed values:	<i>-999999</i>						
Track Information : Track Type	1	No Information	Enumeration	Unitless	0	The type of function, configuration, and/or management of a railway track.	
allowed values:	Crane Track Ladder Track <i>Other</i> Team Track		Drill Track Maglev Paired Track		House Track Monorail Rip Track		Joint Track <i>No Information</i> Stub Track

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
----------------------------	---	----------------	-------------	----------	---	---

allowed values: Below Ground Surface

No Information

On Surface

On Waterbody Bottom

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature RailwaySidetrack (Line 00)

New ☐ Railway Sidetrack

A stretch of railway track connected to a main railway and used for temporary storage, passing, loading, and/or unloading.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Branch Railway Type	1	No Information	Enumeration	Unitless	0	The function or configuration of a branch railway.
<u>allowed values:</u> No Information Spur			Other			Passing Siding
Contained within Tunnel	1	No Information	Boolean	Unitless	0	The object is at least partially located within, or passes through, a tunnel. [Description] For example, a canal passing through a tunnel.
<u>allowed values:</u> False			No Information			True
Cumulative Track Length	1	-999999	REAL	Metre	0	The total cumulative length of track contained within the confines of the feature, exclusive of the branch or main trunk lines running into and/or out of the feature.
<u>allowed values:</u> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a facility, as a whole.
<u>allowed values:</u> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AN050	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> AN050						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Track Information : Railway Gauge	1	-999999	REAL	Metre	0	The distance between a single pair of rails of a railway, measured along the shortest distance from inside rail to inside rail.
<i>allowed values:</i> -999999						
Track Information : Railway Gauge Classification	1	No Information	Enumeration	Unitless	0	The classification of a railway based on the distance between a single pair of rails, measured along the shortest distance from inside rail to inside rail.
<i>allowed values:</i> Broad			Narrow			No Information Standard
Track Information : Railway in Road	1	No Information	Boolean	Unitless	0	An indication that a railway track is located within the bounds of a roadbed. [Description] For example, an infrequently used railway spur in a roadway or a carline running (regularly) in a roadway.
<i>allowed values:</i> False			No Information			True
Track Information : Railway Power Method	1	No Information	Enumeration	Unitless	0	The method by which electrical power is distributed on a railway, if any.
<i>allowed values:</i> Electrified Track Overhead Electrified			No Information			Non-electrified Other
Railway Use	3	No Information	Enumeration	Unitless	0	The use(s) to which a railway is put as part of a transportation system.
<i>allowed values:</i> Carline Tramway			Funicular			No Information Other
Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).
<i>allowed values:</i> Depressed Raised			Level			No Information Not Applicable
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

New Feature Code	1	AN075	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> AN075						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<u>allowed values:</u> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Track Information : Railway Gauge	1	-999999	REAL	Metre	0	The distance between a single pair of rails of a railway, measured along the shortest distance from inside rail to inside rail.
<u>allowed values:</u> -999999						
Track Information : Railway Gauge Classification	1	No Information	Enumeration	Unitless	0	The classification of a railway based on the distance between a single pair of rails, measured along the shortest distance from inside rail to inside rail.
<u>allowed values:</u> Broad			Narrow			No Information Standard

Track Information : Railway Power Method		1	No Information	Enumeration	Unitless	0	The method by which electrical power is distributed on a railway, if any.
allowed values: Electrified Track Overhead Electrified			No Information				Non-electrified Other
Restriction Information : Security Attributes Group (resource classification)		1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U							
Process Step Information : Resource Content Originator		1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
allowed values: Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)			Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)		Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)		1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information							
Restriction Information : Security Attributes Group (resource owner-producer)		1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information							
Specified Domain Values(s)		1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information							
Track Information : Track Type		1	No Information	Enumeration	Unitless	0	The type of function, configuration, and/or management of a railway track.
allowed values: Crane Track Ladder Track Other Team Track			Drill Track Maglev Paired Track		House Track Monorail Rip Track		Joint Track No Information Stub Track
Unique Entity Identifier		1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information							

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature RailwayYard (Area 00)

New ☐ Railway Yard

A system of railway tracks and associated structures that are located within defined limits and that provide for loading, unloading, and/or assembling trains.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
allowed values: No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
Cumulative Track Length	1	-999999	REAL	Metre	0	The total cumulative length of track contained within the confines of the feature, exclusive of the branch or main trunk lines running into and/or out of the feature.
allowed values: -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a facility, as a whole.
allowed values: No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AN060	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: AN060						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
allowed values: No Information Station			Other Transfer Hub			Railway Vehicle Manufacture Warehousing and Storage Railway Vehicle Repair
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.

allowed values: No Information

Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information		True

Feature **RailwayYard (Point 00)** New ☐ Railway Yard

A system of railway tracks and associated structures that are located within defined limits and that provide for loading, unloading, and/or assembling trains.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Cumulative Track Length	1	-999999	REAL	Metre	0	The total cumulative length of track contained within the confines of the feature, exclusive of the branch or main trunk lines running into and/or out of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AN060	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AN060						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> No Information Station			Other Transfer Hub			Railway Vehicle Manufacture Warehousing and Storage Railway Vehicle Repair
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: "Greatest Horizontal Extent"), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False No Information True						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<u>allowed values:</u> Damaged Destroyed Dismantled Intact No Information Ruined Site Preparation Under Construction Unmaintained						
Track Information : Railway Gauge	1	-999999	REAL	Metre	0	The distance between a single pair of rails of a railway, measured along the shortest distance from inside rail to inside rail.
<u>allowed values:</u> -999999						
Track Information : Railway Gauge Classification	1	No Information	Enumeration	Unitless	0	The classification of a railway based on the distance between a single pair of rails, measured along the shortest distance from inside rail to inside rail.
<u>allowed values:</u> Broad Narrow No Information Standard						
Track Information : Railway Power Method	1	No Information	Enumeration	Unitless	0	The method by which electrical power is distributed on a railway, if any.
<u>allowed values:</u> Electrified Track No Information Non-electrified Other Overhead Electrified						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<u>allowed values:</u> Army Geographic Agency (Netherlands) Army Geographic Centre (Spain) Army Geographic Institute (Portugal) Bundeswehr Geoinformation Office (Germany) Defence Acquisition and Logistics Organization (Denmark) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Defence Imagery and Geospatial Organisation (Australia) Defense Information Security (Italy) General Command of Mapping (Turkey) Geographic Service (Belgium) Geographic Service of the Czech Armed Forces (Czech Republic) Geospatial Information Agency (Latvia) Geospatial Intelligence Organisation (New Zealand) Hellenic Military Geographic Service (Greece) Joint Geography Bureau (France) Mapping and Charting Establishment (Canada) Mapping Service (Hungary) Military Geographic Group (Estonia) Military Geographic Service (Norway) Military Geography Division (Poland) Military Mapping Centre (Lithuania) Military Topographic Directorate (Romania) Military Topographic Service (Bulgaria) National Army Topographic Service (Moldova) No Information Other Swedish Armed Forces (Sweden) Topographic Institute (Slovakia) Topographic Service (Finland) U.S. Africa Command (USAFRICOM) U.S. Air Force U.S. Army U.S. Army Geospatial Center (AGC) U.S. Central Command (USCENTCOM) U.S. Central Intelligence Agency (CIA) U.S. Coast Guard U.S. Defense Intelligence Agency (DIA) U.S. Department of Energy (DOE) U.S. Department of Homeland Security (DHS) U.S. Department of State U.S. European Command (USEUCOM) U.S. Federal Bureau of Investigation (FBI) U.S. Geological Survey (USGS) U.S. Joint Forces Command (USJFCOM) U.S. Marine Corps U.S. National Civil Applications Program (NCAP) U.S. National Geospatial-Intelligence Agency (NGA) U.S. National Oceanic and Atmospheric Administration U.S. National Reconnaissance Office (NRO) U.S. National Security Agency (NSA) U.S. Navy U.S. Northern Command (USNORTHCOM) U.S. Pacific Command (PACOM) U.S. Southern Command (USSOUTHCOM) U.S. Special Operations Command (USSOCOM) U.S. Strategic Command (USSTRATCOM) U.S. Transportation Command (USTRANSCOM)						
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.

allowed values: No Information

Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
---	---	----------------	--------	----------	-----	--

allowed values: No Information

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
----------------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Track or Lane Count	1	-999999	REAL	Unitless	0	The total number of independent, parallel paths (for example: a railway track and/or a road lane) in both directions within a route.
---------------------	---	---------	------	----------	---	--

allowed values: -999999

Track Information : Track Type	1	No Information	Enumeration	Unitless	0	The type of function, configuration, and/or management of a railway track.
--------------------------------	---	----------------	-------------	----------	---	--

<u>allowed values:</u> Crane Track Ladder Track Other Team Track			Drill Track Maglev Paired Track			House Track Monorail Rip Track Joint Track No Information Stub Track
---	--	--	---------------------------------------	--	--	---

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

[Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						

Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values:	No Information					
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature RecyclingSite (Area 00)

New ☐ Recycling Site

A site engaged in the wrecking, dismantling, storage, recycling, and/or disposal of discarded or scrap products. [Description] For example, a wrecking yard or a scrap yard.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AB010	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AB010						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.

<i>allowed values:</i> <i>Damaged</i> No Information <i>Unmaintained</i>			<i>Destroyed</i> <i>Ruined</i>			<i>Dismantled</i> <i>Site Preparation</i>	<i>Intact</i> <i>Under Construction</i>

<i>allowed values:</i> No Information							
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
<i>allowed values:</i> No Information							
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.	
<i>allowed values:</i> -999999

Feature Reef (Area 00) New ☐ Reef

A mass of rock or coral which either reaches close to the sea surface or is exposed at low tide, posing a hazard to navigation.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Delineation Known	1	No Information	Boolean	Unitless	0	An indication that the delineation (for example: limits and information) of a feature is known.
<u>allowed values:</u> FALSE			No Information			TRUE
New Feature Code	1	BD120	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> BD120						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature RetailStand (Area 00)

New ☐ Retail Stand

A small structure that stands alone, and is designated for the purpose of supplying a product (for example: souvenirs, magazines, snacks or refreshments) or service (for example: a shoe shine) to passers-by. [Description] It may be roofed (for example: a newspaper stand along the side of a city street or the attendant's booth in a parking lot or at a taxi cab stand), covered by an awning (for example: a cellular phone booth in the center of the promenade of a shopping mall or a hot dog stand on a city sidewalk), or unroofed. Although often semi-permanent in nature it may be wheeled and portable on a seasonal basis or more frequently as business conditions warrant.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AL180	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL180						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.

<i>allowed values:</i> Commerce No Information Retail Banking			<i>Food Service</i> Other <i>Retail Sale</i>			Government Postal Activities	Mobile Phone Service Restaurant
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.	
<i>allowed values:</i> No Information							
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.	
<i>allowed values:</i> -999999							
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.	
<i>allowed values:</i> -999999							
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<i>allowed values:</i> -999999							
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i> No Information							
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i> No Information							
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.	
<i>allowed values:</i> False			No Information			True	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.	
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation	Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
<i>allowed values:</i> U							
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

	U.S. Transportation Command (USTRANSCOM)			

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
allowed values: Brick No Information			Concrete Other			Masonry Plastic Metal Wood
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature RiceField (Area 00)

New ☐ Rice Field

A tract that is periodically covered with water and is used for growing rice.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999, -999999]			No Information			
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999						
Crop Information : Crop Species	1	Rice	Enumeration	Unitless	0	The predominant species of a crop land.
<i>allowed values:</i> Rice						
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999						
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values:</i> -999999						
Crop Information : Farming Method	3	No Information	Enumeration	Unitless	0	The agricultural practice(s) in use within an agro-ecosystem.
<i>allowed values:</i> Fallow Permanent			Grazing Permanent Irrigation			No Information Slash and Burn Other
Crop Information : Farming Pattern	3	No Information	Enumeration	Unitless	0	The general arrangement(s) and/or pattern(s) of farming fields.
<i>allowed values:</i> Intermingled Trees No Information Treeless			Intermingled Woods Other Trellised			Irregular Regular Linear Terraced
New Feature Code	1	BH135	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BH135						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Hydrologic Persistence	1	No Information	Enumeration	Unitless		The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry Perennial			Ephemeral			Intermittent No Information

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						
New Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
allowed values: -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
New Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
allowed values: -999999						
Predominant Maximum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
allowed values: [-999999, -999999]			No Information			
Predominant Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
allowed values: [-999999, -999999]			No Information			
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
	<u>allowed values:</u> No Information						
	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
	<u>allowed values:</u> No Information						
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
	<u>allowed values:</u> No Information						
New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units		The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<u>allowed values:</u> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<u>allowed values:</u> No Information						
	Vegetation Trafficability Impact	1	[-999999, -999999]	Real_Interval	Percent		The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
	<u>allowed values:</u> [-999999, -999999]						
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime		The electrical conductivity of water.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre		The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<u>allowed values:</u> -999999						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless		The potability of water based on the type of treatment required before it is safe for human consumption.
	<u>allowed values:</u> Contaminated Potable			No Information Treatable		Nonpotable Other	
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.

	<i>allowed values:</i>	Alkaline		Brackish		Brine		Fresh
		Mineral		No Information		Not Applicable		Other
		Saline		Seawater				
New	Water Resource Information : Water Use	1	No Information	Enumeration	Unitless	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.		
	<i>allowed values:</i>	Agricultural Irrigation		Commercial		Domestic Irrigation		Industrial
		Institutional		Livestock		Municipal		No Information
		Other		Power Generation		Recreational		Sanitary Domestic
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Rig (Area 00)

New ☐ **Rig**

A superstructure fitted for drilling or lifting operations for extraction and/or exploitation of natural resources.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
allowed values: False			No Information			True
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
allowed values: No Information			Non-operational			Not in Operation
allowed values: Partially Operational			Planned			Temporarily Non-operational
New Feature Code	1	AA040	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: AA040						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values: No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
allowed values: -999999						

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Location Referenced to Shoreline	1	No Information	Enumeration	Unitless	0	The location of an object in relation to a land water boundary.
<i>allowed values:</i> At Shoreline			Inland			No Information Offshore
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Brine Petroleum			Gas Water			No Information Other
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Aluminum Other			Iron Steel			Metal Wood No Information
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
<i>allowed values:</i> No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature River (Area 00)New ☐ River**A natural flowing watercourse.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Inland Waterbody Bank (2) : Above Water Bank Slope (second bank)	1	-999999	REAL	Percent	0	The amount of upward inclination between the horizontal surface of the mean water level of a watercourse where it touches the bank and the top of the first usable break in slope, measured at the same point on the upper bank as the military gap width. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
<i>allowed values:</i> -999999						
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
Average Water Depth	1	[-999999,-999999]	Real_Interval	Metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999,-999999]						
Inland Waterbody Bank (1) : Bank Orientation (first bank)	1	No Information	Enumeration	Unitless	0	The relative orientation of a bank of an inland waterbody based on the direction of predominant water flow in the adjacent waterbody.

<i>allowed values:</i>	Indeterminate		Left			No Flow	No Information
	Other		Right				
<i>allowed values:</i>	Indeterminate		Left			No Flow	No Information
	Other		Right				
Inland Waterbody Bank (2) : Bottom Material Type (second bank)	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing the bottom of a body of water.	
<i>allowed values:</i>	Bedrock		Clay and Silt			Concrete	Coral
	Gravel and Cobble		Masonry			No Information	Other
	Paved		Peat			Reinforced Concrete	Rocks and Boulders
	Sand		Sand and Gravel			Sand over Mud	Silty Sands
	Slash		Soil				
<i>allowed values:</i>	Bedrock		Clay and Silt			Concrete	Coral
	Gravel and Cobble		Masonry			No Information	Other
	Paved		Peat			Reinforced Concrete	Rocks and Boulders
	Sand		Sand and Gravel			Sand over Mud	Silty Sands
	Slash		Soil				
<i>allowed values:</i>	Bedrock		Clay and Silt			Concrete	Coral
	Gravel and Cobble		Masonry			No Information	Other
	Paved		Peat			Reinforced Concrete	Rocks and Boulders
	Sand		Sand and Gravel			Sand over Mud	Silty Sands
	Slash		Soil				
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.	
<i>allowed values:</i>	-999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.	
<i>allowed values:</i>	-999999						
Covered Drain	1	No Information	Boolean	Unitless	0	An indication that a watercourse section is completely covered over and connects to uncovered watercourses at each end.	
<i>allowed values:</i>	False		No Information			True	
Covered Drain Length	1	-999999	Real	Metre	0	The length of a watercourse section that is completely covered over and connects to uncovered watercourses at each end.	
<i>allowed values:</i>	-999999						
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.	
<i>allowed values:</i>	-999999						
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.	
<i>allowed values:</i>	-999999						
New Feature Code	1	BH140	CONSTRAINED_STRING	Unitless	5	Feature Code	
<i>allowed values:</i>	BH140						
Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.	
<i>allowed values:</i>	No Information						
Geographic Name Type	3	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.	
<i>allowed values:</i>	Conventional		Historical Transliterated			Native Transliterated	No Information
	Other		Provisional			Unverified Transliterated	Variant Transliterated

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<u>allowed values:</u> Accurate			Approximate			Doubtful
						No Information
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<u>allowed values:</u> -999999						
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<u>allowed values:</u> Dry			Intermittent			No Information
						Perennial
Isolated	1	No Information	Boolean	Unitless	0	An indication that a feature (for example: a structure) is in the open by itself, isolated from other features of a similar type, and thus is visually distinct from surrounding features when viewed from a distance.
<u>allowed values:</u> FALSE			No Information			TRUE
New Least Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
New Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigability Information	1	No Information	Enumeration	Unitless	0	Information about the navigability of a body of water by ocean-going and/or large vessels. [Description] Navigability is not intended to include jet skis, motorboats or other recreational craft.
<u>allowed values:</u> Navigable			Navigable and Operational			Navigable but Abandoned
			Not Navigable			Other
						Navigable with Periodic Restrictions
New Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<u>allowed values:</u> -999999						
Predominant Average Water Velocity	1	[-999999,-999999]	Real_Interval	Metres per Second	0	The average water velocity, exclusive of high water due to runoff or low water due to drought.
<u>allowed values:</u> (-INFINITY, 1.5]			[-999999, -999999]			[-999999, -999999]
Predominant Maximum Water Depth	1	[-999999,-999999]	Real_Interval	Metre	0	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> (0.8, 1.6]			(1.6, 2.4]			(2.4, INFINITY)
						(-INFINITY, 0.8]

Predominant Maximum Water Velocity	1	[-999999,-999999]	Real_Interval	Metres per Second	0	The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i>						
Predominant Minimum Water Depth	1	[-999999,-999999]	Real_Interval	Metre	0	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i>						
Predominant Minimum Water Velocity	1	[-999999,-999999]	Real_Interval	Metres per Second	0	The average minimum (seasonal low water) water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i>						
Predominant Water Depth	1	-999999	Real	Metre		The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i>						
Inland Waterbody Bank (1) : Predominant Waterbody Bank Height (first bank)	1	[-999999, -999999]	REAL_Interval	Metre	0	The predominant height (the height of at least 50 percent) of the bank, measured from mean water level to the first break in slope above the mean water level.
<i>allowed values:</i>						
<i>allowed values:</i>						
Inland Waterbody Bank (2) : Predominant Waterbody Bank Slope (second bank)	1	[-999999, -999999]	REAL_Interval	Percent	0	The predominant slope (the slope of at least 50 percent) of the bank, measured from mean water level to the first accessible break in slope above the mean water level. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
<i>allowed values:</i>						
<i>allowed values:</i>						
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i>						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Inland Waterbody Bank (2) : Shoreline Delineated (second bank)	1	No Information	Boolean	Unitless	0	An indication that the delineation of a shoreline is definite. [Description] The delineation of the shoreline along a beach is typically definite whereas along a mangrove swamp it is typically indefinite.
allowed values:	False		No Information			True
allowed values:	False		No Information			True
Inland Waterbody Bank (1) : Shoreline Type (first bank)	1	No Information	Enumeration	Unitless	0	The physical characteristics of a shoreline.
allowed values:	Building Rubble Marshy Sandy		Erosion Rubble Mud Shingly			Ice No Information Stony
allowed values:	Building Rubble Marshy Sandy		Erosion Rubble Mud Shingly			Ice No Information Stony
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values:	No Information					
Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
allowed values:	-999999					
Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
allowed values:	-999999					
Terrain Gap Width	1	-999999	REAL	Metre	0	The minimum horizontal bridging distance necessary to cross a channel. [Description] The width is measured perpendicular to the direction of water flow from bank to bank, at the first usable break in slope on each side of the channel above mean high water. Usable banks are those accessible by vehicles; small unusable ledges and cliffs are not considered usable breaks in slopes.
allowed values:	-999999					

	Tide Influenced	1	No Information	Boolean	Unitless	0	An indication that a waterbody is affected by the tide.
	<i>allowed values:</i>	<i>False</i>		<i>No Information</i>			<i>True</i>
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
	<i>allowed values:</i>	<i>-999999</i>					
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<i>allowed values:</i>	<i>-999999</i>					
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<i>allowed values:</i>	<i>No Information</i>					
	Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
	<i>allowed values:</i>	<i>Below Ground Surface</i>		<i>No Information</i>			<i>On Surface</i>
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
	<i>allowed values:</i>	<i>-999999</i>					
New	Water Resource Information : Water Flow	1	-999999	Real	Litres per Minute	0	The rate of water flow through or exiting from a feature.
	<i>allowed values:</i>	<i>-999999</i>					
New	Water Resource Information : Water Flow Rate Category	1	No Information	Enumeration	Unitless	0	Value used to categorize streams, canals, rivers and other flowing water given the quantity of water flow. The categories correspond to specifications for water purification units in order to allow for quick identification of areas of water flow that are most suitable for placement of water purification equipment.
	<i>allowed values:</i>	<i>Large</i> <i>Small</i>		<i>Moderate</i>			<i>No Information</i> <i>Other</i>
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i>	<i>-999999</i>					
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i>	<i>Contaminated</i> <i>Potable</i>		<i>No Information</i> <i>Treatable</i>			<i>Nonpotable</i> <i>Other</i>
New	Water Resource Information : Water Pump Accessibility	1	No Information	Enumeration	Unitless		The approachable or easily entered side of a water source where portable equipment including pumps and pipes may be placed into the water source and used with nearby portable equipment. [Description] Provides an indication of whether it is possible access the water for the purpose of connecting portable water pumping equipment to temporary purification units. Accessibility must meet distance requirements in the transport of water: 100 m horizontal and 10 m vertical.
	<i>allowed values:</i>	<i>From All Sides</i> <i>From Right</i> <i>No Information</i>		<i>From East</i> <i>From South</i>			<i>From Left</i> <i>From West</i> <i>From North</i> <i>No Accessibility</i>
New	Water Resource Information : Water Stage	1	No Information	Enumeration	Unitless	0	The flow stage of a stream or canal.
	<i>allowed values:</i>	<i>High</i> <i>Other</i>		<i>Low</i>			<i>Mean</i> <i>No Information</i>
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.

<i>allowed values:</i> Alkaline No Information			Brackish Other		Fresh Saline	Mineral
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional Other			Commercial Livestock Power Generation		Domestic Irrigation Municipal Recreational	Industrial No Information Sanitary Domestic
	Inland Waterbody Bank (1) : Waterbody Bank Height (first bank)	1	-999999	REAL	Metre	0 The height of the waterbody bank above the average water level.
<i>allowed values:</i> -999999 <i>allowed values:</i> -999999						
	Inland Waterbody Bank (1) : Waterbody Bank Vegetation Cover (first bank)	1	[-999999, -999999]	REAL_Interval	Percent	0 The fraction of vegetation cover on the bank of a watercourse.
<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval	Greater-than Semi-interval Less-than Semi-interval
<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval	Greater-than Semi-interval Less-than Semi-interval
	Watercourse Channel Type	1	No Information	Enumeration	Unitless	0 The type of trough-like depression that is normally occupied by a watercourse.
<i>allowed values:</i> Braided Stream No Information Wadi			Channelized Stream Normal Channel		Gorge Other	Lost Watercourse Split Stream
	Watercourse Morphology	1	No Information	Enumeration	Unitless	0 The type of a watercourse based on its shape and/or configuration.
<i>allowed values:</i> Abandoned Confluence Meander Pool			Anabranh Cut-off Mouth Reach		Bend Distributary No Information	Canalized Headwaters Other
	Watercourse Sink Type	1	No Information	Enumeration	Unitless	0 The type of the sink of a watercourse.
<i>allowed values:</i> Disappearing			Dissipating		No Information	Other
	Width	1	-999999	REAL	Metre	0 The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999

Feature River (Line 00)

New ☐ River

A natural flowing watercourse.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Inland Waterbody Bank (1) : Above Water Bank Slope (first bank)	1	-999999	REAL	Percent	0	The amount of upward inclination between the horizontal surface of the mean water level of a watercourse where it touches the bank and the top of the first usable break in slope, measured at the same point on the upper bank as the military gap width. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
<i>allowed values:</i> -999999						
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
Average Water Depth	1	[-999999,-999999]	Real_Interval	Metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999,-999999]						
Inland Waterbody Bank (2) : Bank Orientation (second bank)	1	No Information	Enumeration	Unitless	0	The relative orientation of a bank of an inland waterbody based on the direction of predominant water flow in the adjacent waterbody.
<i>allowed values:</i> Indeterminate			Left			No Flow
<i>allowed values:</i> Other			Right			No Information
<i>allowed values:</i> Indeterminate			Left			No Flow
<i>allowed values:</i> Other			Right			No Information
Inland Waterbody Bank (1) : Bottom Material Type (first bank)	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing the bottom of a body of water.
<i>allowed values:</i> Bedrock			Clay and Silt			Concrete
<i>allowed values:</i> Gravel and Cobble			Masonry			No Information
<i>allowed values:</i> Paved			Peat			Reinforced Concrete
<i>allowed values:</i> Sand			Sand and Gravel			Sand over Mud
<i>allowed values:</i> Slash			Soil			Coral
<i>allowed values:</i> Bedrock			Clay and Silt			Concrete

<i>allowed values:</i> Sand			Sand and Gravel			Sand over Mud
<i>allowed values:</i> Slash			Soil			Coral
<i>allowed values:</i> Bedrock			Clay and Silt			Concrete
<i>allowed values:</i> Gravel and Cobble			Masonry			No Information
<i>allowed values:</i> Paved			Peat			Reinforced Concrete
<i>allowed values:</i> Sand			Sand and Gravel			Sand over Mud
<i>allowed values:</i> Slash			Soil			Coral
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density	0	The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999						
Covered Drain	1	No Information	Boolean	Unitless	0	An indication that a watercourse section is completely covered over and connects to uncovered watercourses at each end.
<i>allowed values:</i> False			No Information			True

	Covered Drain Length	1	-999999	Real	Metre	0	The length of a watercourse section that is completely covered over and connects to uncovered watercourses at each end.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<u>allowed values:</u> -999999						
New	Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
	<u>allowed values:</u> -999999						
New	Feature Code	1	BH140	CONSTRAINED_STRING	Unitless	5	Feature Code
	<u>allowed values:</u> BH140						
	Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
	Geographic Name Type	3	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Other			Historical Transliterated Provisional		Native Transliterated Unverified Transliterated	No Information Variant Transliterated
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999						
	Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
	<u>allowed values:</u> Accurate			Approximate		Doubtful	No Information
	Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
	<u>allowed values:</u> -999999						
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<u>allowed values:</u> Dry			Intermittent		No Information	Perennial
	Isolated	1	No Information	Boolean	Unitless	0	An indication that a feature (for example: a structure) is in the open by itself, isolated from other features of a similar type, and thus is visually distinct from surrounding features when viewed from a distance.
	<u>allowed values:</u> FALSE			No Information		TRUE	
New	Least Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling.
	<u>allowed values:</u> -999999						
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<u>allowed values:</u> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						

Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i>	No Information					
Navigability Information	1	No Information	Enumeration	Unitless	0	Information about the navigability of a body of water by ocean-going and/or large vessels. [Description] Navigability is not intended to include jet skis, motorboats or other recreational craft.
<i>allowed values:</i>	Navigable No Information		Navigable and Operational Not Navigable		Navigable but Abandoned Other Navigable with Periodic Restrictions	
New Water Resource Information : pH of Water	1	-999999	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i>	-999999					
Predominant Average Water Velocity	1	[-999999,-999999]	Real_Interval	Metres per Second	0	The average water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i>	(-INFINITY, 1.5]		[-999999,-999999]		[-999999,-999999]	
Predominant Maximum Water Depth	1	[-999999,-999999]	Real_Interval	Metre	0	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i>	(0.8, 1.6] [-999999,-999999]		(1.6, 2.4]		(2.4, INFINITY) (-INFINITY, 0.8]	
Predominant Maximum Water Velocity	1	[-999999,-999999]	Real_Interval	Metres per Second	0	The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i>	(0.5, 1.5] [-999999,-999999]		(1.5, 2.5]		(2.5, INFINITY) (-INFINITY, 0.5]	
Predominant Minimum Water Depth	1	[-999999,-999999]	Real_Interval	Metre	0	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i>	(0.8, 1.6] [-999999,-999999]		(1.6, 2.4]		(2.4, INFINITY) (-INFINITY, 0.8]	
Predominant Minimum Water Velocity	1	[-999999,-999999]	Real_Interval	Metres per Second	0	The average minimum (seasonal low water) water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i>	(0.5, 1.5] [-999999,-999999]		(1.5, 2.5] [-999999,-999999]		(2.5, INFINITY) (-INFINITY, 0.5]	
Predominant Water Depth	1	-999999	Real	Metre		The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i>	-999999					
Inland Waterbody Bank (2) : Predominant Waterbody Bank Height (second bank)	1	[-999999,-999999]	REAL_Interval	Metre	0	The predominant height (the height of at least 50 percent) of the bank, measured from mean water level to the first break in slope above the mean water level.
<i>allowed values:</i>	[-999999,-999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval	
<i>allowed values:</i>	[-999999,-999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval	
Inland Waterbody Bank (1) : Predominant Waterbody Bank Slope (first bank)	1	[-999999,-999999]	REAL_Interval	Percent	0	The predominant slope (the slope of at least 50 percent) of the bank, measured from mean water level to the first accessible break in slope above the mean water level. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
<i>allowed values:</i>	[-999999,-999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval	
<i>allowed values:</i>	[-999999,-999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval	

Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values: U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Inland Waterbody Bank (2) : Shoreline Delineated (second bank)	1	No Information	Boolean	Unitless	0	An indication that the delineation of a shoreline is definite. [Description] The delineation of the shoreline along a beach is typically definite whereas along a mangrove swamp it is typically indefinite.
allowed values: False			No Information			True
allowed values: False			No Information			True
Inland Waterbody Bank (1) : Shoreline Type (first bank)	1	No Information	Enumeration	Unitless	0	The physical characteristics of a shoreline.

Sandy						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
New Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
allowed values: -999999						

New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
	<i>allowed values:</i> -999999						
	Terrain Gap Width	1	-999999	REAL	Metre	0	The minimum horizontal bridging distance necessary to cross a channel. [Description] The width is measured perpendicular to the direction of water flow from bank to bank, at the first usable break in slope on each side of the channel above mean high water. Usable banks are those accessible by vehicles; small unusable ledges and cliffs are not considered usable breaks in slopes.
	<i>allowed values:</i> -999999						
	Tide Influenced	1	No Information	Boolean	Unitless	0	An indication that a waterbody is affected by the tide.
	<i>allowed values:</i> False			No Information			True
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<i>allowed values:</i> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<i>allowed values:</i> No Information						
	Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
	<i>allowed values:</i> Below Ground Surface			No Information			On Surface
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	0	The electrical conductivity of water.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Flow	1	-999999	Real	Litres per Minute	0	The rate of water flow through or exiting from a feature.
	<i>allowed values:</i> -999999						
New	Water Resource Information : Water Flow Rate Category	1	No Information	Enumeration	Unitless	0	Value used to categorize streams, canals, rivers and other flowing water given the quantity of water flow. The categories correspond to specifications for water purification units in order to allow for quick identification of areas of water flow that are most suitable for placement of water purification equipment.
	<i>allowed values:</i> Large Small			Moderate		No Information	Other
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<i>allowed values:</i> -999999						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i> Contaminated Potable			No Information Treatable		Nonpotable	Other
New	Water Resource Information : Water Pump Accessibility	1	No Information	Enumeration	Unitless		The approachable or easily entered side of a water source where portable equipment including pumps and pipes may be placed into the water source and used with nearby portable equipment. [Description] Provides an indication of whether it is possible access the water for the purpose of connecting portable water pumping equipment to temporary purification units. Accessibility must meet distance requirements in the transport of water: 100 m horizontal and 10 m vertical.
	<i>allowed values:</i> From All Sides From Right No Information			From East From South		From Left From West	From North No Accessibility

New	Water Resource Information : Water Stage	1	No Information	Enumeration	Unitless	0	The flow stage of a stream or canal.
	<i>allowed values:</i> <i>High</i> <i>Other</i>			<i>Low</i>			<i>Mean</i> <i>No Information</i>
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
	<i>allowed values:</i> <i>Alkaline</i> <i>No Information</i>			<i>Brackish</i> <i>Other</i>			<i>Fresh</i> <i>Saline</i> <i>Mineral</i>
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless		The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.
	<i>allowed values:</i> <i>Agricultural Irrigation</i> <i>Institutional</i> <i>Other</i>			<i>Commercial</i> <i>Livestock</i> <i>Power Generation</i>			<i>Domestic Irrigation</i> <i>Municipal</i> <i>Recreational</i> <i>Industrial</i> <i>No Information</i> <i>Sanitary Domestic</i>
	Inland Waterbody Bank (2) : Waterbody Bank Height (second bank)	1	-999999	REAL	Metre	0	The height of the waterbody bank above the average water level.
	<i>allowed values:</i> <i>-999999</i> <i>allowed values:</i> <i>-999999</i>						
	Inland Waterbody Bank (2) : Waterbody Bank Vegetation Cover (second bank)	1	[-999999, -999999]	REAL_Interval	Percent	0	The fraction of vegetation cover on the bank of a watercourse.
	<i>allowed values:</i> <i>[-999999, -999999]</i> <i>Greater-than to Less-than-or-equal Interval</i> <i>Open Interval</i>			<i>Closed Interval</i> <i>Greater-than-or-equal to Less-than Interval</i>			<i>Greater-than or Equal Semi-interval</i> <i>Less-than or Equal Semi-interval</i> <i>Greater-than Semi-interval</i> <i>Less-than Semi-interval</i>
	<i>allowed values:</i> <i>[-999999, -999999]</i> <i>Greater-than to Less-than-or-equal Interval</i> <i>Open Interval</i>			<i>Closed Interval</i> <i>Greater-than-or-equal to Less-than Interval</i>			<i>Greater-than or Equal Semi-interval</i> <i>Less-than or Equal Semi-interval</i> <i>Greater-than Semi-interval</i> <i>Less-than Semi-interval</i>
	Watercourse Channel Type	1	No Information	Enumeration	Unitless	0	The type of trough-like depression that is normally occupied by a watercourse.
	<i>allowed values:</i> <i>Braided Stream</i> <i>No Information</i> <i>Wadi</i>			<i>Channelized Stream</i> <i>Normal Channel</i>			<i>Gorge</i> <i>Other</i> <i>Lost Watercourse</i> <i>Split Stream</i>
	Watercourse Morphology	1	No Information	Enumeration	Unitless	0	The type of a watercourse based on its shape and/or configuration.
	<i>allowed values:</i> <i>Abandoned</i> <i>Confluence</i> <i>Meander</i> <i>Pool</i>			<i>Anabranch</i> <i>Cut-off</i> <i>Mouth</i> <i>Reach</i>			<i>Bend</i> <i>Distributary</i> <i>No Information</i> <i>Canalized</i> <i>Headwaters</i> <i>Other</i>
	Watercourse Sink Type	1	No Information	Enumeration	Unitless	0	The type of the sink of a watercourse.
	<i>allowed values:</i> <i>Disappearing</i>			<i>Dissipating</i>			<i>No Information</i> <i>Other</i>
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
	<i>allowed values:</i> <i>-999999</i>

Feature Road (Area 00)New ☐ Road**A route with a specially prepared surface that is intended for use by wheeled vehicles.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Centerline Spacing	1	-999999	REAL	Metre	0	The distance between the centrelines of the two travelled ways of a divided highway.
<i>allowed values:</i> -999999						
Contained within Tunnel	1	No Information	Boolean	Unitless	0	The object is at least partially located within, or passes through, a tunnel. [Description] For example, a canal passing through a tunnel.
<i>allowed values:</i> False			No Information			True
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Military Other Tribal			International Municipal Private			Interstate National Public Joint Military and Civilian No Information State
Deck Level	1	-999999	REAL	Unitless	0	The relative level of a deck within a set of vertically stacked decks, one over another, in a transportation structure (for example: on a bridge or in a tunnel). [Description] The lowest deck is numbered '1' and the remaining decks are numbered in ascending order (bottom to top) with the uppermost deck being assigned the highest value.
<i>allowed values:</i> -999999						
Divided	1	No Information	Boolean	Unitless	0	An indication that the lanes or tracks in a land transportation route (for example: a road or a railway), are horizontally separated (for example: by a median strip) and not adjoining. [Description] May be used to indicate the separation of opposing flows of traffic in order to improve safety or to meet route engineering restrictions by some means. For example, the two travelled ways of a divided highway may pass at different elevations along the side of a mountain or may diverge when passing around significant engineering obstacles (for example: rocky outcrops).
<i>allowed values:</i> False			No Information			True
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AP030	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AP030						
Feature Configuration	1	No Information	Enumeration	Unitless	0	The type of multiplicity and/or configuration of a feature.
<i>allowed values:</i> Divided Different			Divided Same			No Information Non-divided
Flight Strip Capable	1	No Information	Boolean	Unitless	0	An indication that a road is designed to support emergency (for example: national defence) use as a runway. [Description] Ideally, oriented in the direction of the prevailing wind.
<i>allowed values:</i> False			No Information			True
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i>	Accurate		Approximate			Doubtful
						No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i>	-999999					
Median Present	1	No Information	Boolean	Unitless	0	An indication that the lanes or tracks of a divided land transportation route (for example: a road or a railway) are separated by a vertical median barrier. [Description] Often used to separate opposing flows of traffic in order to improve safety. For example, may be a substantial concrete barrier of approximately 1 metre height.
<i>allowed values:</i>	False		No Information			True
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i>	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i>	No Information					
One-way	1	No Information	Boolean	Unitless	0	An indication that a thoroughfare is intended to be used only in a single direction. [Description] For example, a metropolitan street grid may include streets designated for one-way use in order to improve traffic flow; usually there is a paired parallel street nearby designated for one-way use in the opposite direction. A thoroughfare is a public way, unobstructed and forming a route (for example: a road or a path) between two places.
<i>allowed values:</i>	False		No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i>	Damaged		Destroyed			Dismantled
	No Information		Ruined			Intact
	Unmaintained					Site Preparation
						Under Construction
Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).
<i>allowed values:</i>	Depressed		Level			No Information
	Raised					Not Applicable
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i>	U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

allowed values:	Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)		
	Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	U.S. Navy U.S. Special Operations Command (USSOCOM)			
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
New Road Interchange Ramp	1	No Information	Boolean	Unitless	0	An indication that a road serves as a section of a road interchange, providing traffic access from one through road to another, but does not itself carry through traffic. [Description] Through roads normally are located on separate vertical levels, thus affording uninterrupted traffic flow, with at least one road being supported by a bridge and the other proceeding through an underpass. In the case of a rotary interchange on a single level there is no uninterrupted through route, therefore all traffic flows pass along road interchange ramps.
allowed values:	False		No Information		True	
Route Pavement Information : Road Weather Restriction	1	No Information	Enumeration	Unitless	0	The type of weather conditions under which a road is usable.
allowed values:	All-weather No Information		Closed in Winter Other		Fair-weather Winter Only	Limited All-weather
New Route Desgination Type	3	No Information	Enumeration	Unitless	0	The type of a road network according to the nature of service that it is intended to provide, as designated by international, national and/or other administrative authorities.
allowed values:	International No Information		Local Other		National Secondary	National Motorway
Route Designation	3	No Information	String	Unitless	24	The official designation assigned to a route. [Description] For example, 'I-95', 'A-1', 'E-6', or 'M-5'.
allowed values:	No Information					
Route Median Width	1	[-999999, -999999]	REAL_Interval	Metre	0	The width of a divider that separates adjacent route lanes or tracks in a land transportation route. [Description] The adjacent route lanes may carry traffic in opposing directions (for example: a divided highway or a dual track railway) or in the same direction (for example: a high-speed 'thru' lane and a local collector/distributor lane).
allowed values:	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval		Greater-than or Equal Semi-interval Less-than or Equal Semi-interval	Greater-than Semi-interval Less-than Semi-interval
Route Pavement Information : Route Minimum Travelled Way Width	1	-999999	REAL	Metre	0	The minimum width of the travelled way of a route. [Description] Excludes pavements and shoulders.
allowed values:	-999999					

Route Pavement Information : Route Surface Composition	1	No Information	Enumeration	Unitless	0	The composition(s) of a durable surface (for example: a pavement) intended to sustain ground traffic (for example: vehicular traffic or foot traffic). [Description] Depending on the traffic situation (for example: on a floor, in a courtyard, or on a road) different compositions may be used, however in general such surfaces are composed of pieces of a hard material fitted closely together (for example: cobble-stone or brick) or of an undivided hard layer (for example: concrete) so as to give a compact, uniform, and smooth surface.
<i>allowed values:</i>	Aggregate		Asphalt			Asphalt over Concrete
	Brick		Cobble-stone			Concrete
	Flexible Pavement		Graded rolled or oiled sand			Ice
	Metal		No Information			Other
	Snow		Stabilized Earth			Unimproved
	Wood Plank					Bound Surface
						Corduroy
						Macadam
						Rigid Pavement
						Wood
Route Total Usable Width	1	-999999	REAL	Metre	0	The total usable width of the travelled way of a route. [Description] Includes pavements and shoulders.
<i>allowed values:</i>	-999999					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i>	No Information					
Supported by Bridge Span	1	No Information	Boolean	Unitless	0	The object is at least partially supported by, or passes across, a bridge span. [Description] For example, an aqueduct carried across a valley by one or more bridge spans.
<i>allowed values:</i>	False		No Information			True
Surface Slope	1	[-999999, -999999]	REAL_Interval	Percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.
<i>allowed values:</i>	[-999999, -999999]		Closed Interval			Greater-than or Equal Semi-interval
	Greater-than to Less-than-or-equal Interval		Greater-than-or-equal to Less-than Interval			Less-than or Equal Semi-interval
	Open Interval					Greater-than Semi-interval
						Less-than Semi-interval
Survey Coverage Category	1	No Information	Enumeration	Unitless		A general evaluation of the coverage quality of a survey, as a category. [Description] See possibly accompanying Attribute: 'Position Quality Category' for additional survey-related information.
<i>allowed values:</i>	No Information		Surveyed			Unsurveyed
Thoroughfare Type	1	No Information	Enumeration	Unitless	0	The type of a thoroughfare based on its design. [Description] A thoroughfare is a public way, unobstructed and forming a route (for example: a road or a path) between two places. The thoroughfare type may be used in proper names and thus to represent the components of a postal address in concert with Attributes: 'Address Number', 'Address Direction Prefix', 'Thoroughfare Name', and 'Address Direction Suffix'.
<i>allowed values:</i>	Avenue		Boulevard			Circle
	Drive		Lane			Limited Access Motorway
	No Information		Other			Parkway
	Road		Street			Tank Trail
						Close
						Motorway
						Place
						Terrace
Through Route	1	No Information	Boolean	Unitless	0	An indication that a route (for example: a road) passes through (both into and out of) a place (for example: an urban area) without interruption. [Description] A through route may have devices (for example: a traffic light) to control traffic flow.
<i>allowed values:</i>	False		No Information			True
Track or Lane Count	1	-999999	REAL	Unitless	0	The total number of independent, parallel paths (for example: a railway track and/or a road lane) in both directions within a route.
<i>allowed values:</i>	-999999					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i>	No Information					
Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
<i>allowed values:</i>	Below Ground Surface		No Information			On Surface
						On Waterbody Bottom

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
-------	---	---------	------	-------	---	--

allowed values: -999999

Width of Second Travelled Way	1	-999999	REAL	Metre	0	The width of a second travelled way that is the lesser width of the two travelled ways in a divided highway.
-------------------------------	---	---------	------	-------	---	--

allowed values: -999999

Feature Road (Line 00)

New ☐ Road

A route with a specially prepared surface that is intended for use by wheeled vehicles.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Centerline Spacing	1	-999999	REAL	Metre	0	The distance between the centrelines of the two travelled ways of a divided highway.
<i>allowed values:</i> -999999						
Contained within Tunnel	1	No Information	Boolean	Unitless	0	The object is at least partially located within, or passes through, a tunnel. [Description] For example, a canal passing through a tunnel.
<i>allowed values:</i> False			No Information			True
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Military Other Tribal			International Municipal Private			Interstate National Public Joint Military and Civilian No Information State
Deck Level	1	-999999	REAL	Unitless	0	The relative level of a deck within a set of vertically stacked decks, one over another, in a transportation structure (for example: on a bridge or in a tunnel). [Description] The lowest deck is numbered '1' and the remaining decks are numbered in ascending order (bottom to top) with the uppermost deck being assigned the highest value.
<i>allowed values:</i> -999999						
Divided	1	No Information	Boolean	Unitless	0	An indication that the lanes or tracks in a land transportation route (for example: a road or a railway), are horizontally separated (for example: by a median strip) and not adjoining. [Description] May be used to indicate the separation of opposing flows of traffic in order to improve safety or to meet route engineering restrictions by some means. For example, the two travelled ways of a divided highway may pass at different elevations along the side of a mountain or may diverge when passing around significant engineering obstacles (for example: rocky outcrops).
<i>allowed values:</i> False			No Information			True
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AP030	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AP030						
Feature Configuration	1	No Information	Enumeration	Unitless	0	The type of multiplicity and/or configuration of a feature.

<i>allowed values:</i> Divided Different			Divided Same			No Information	Non-divided
Flight Strip Capable	1	No Information	Boolean	Unitless	0	An indication that a road is designed to support emergency (for example: national defence) use as a runway. [Description] Ideally, oriented in the direction of the prevailing wind.	
<i>allowed values:</i> False			No Information			True	
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.	
<i>allowed values:</i> No Information							
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.	
<i>allowed values:</i> Accurate			Approximate			Doubtful	No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<i>allowed values:</i> -999999							
Median Present	1	No Information	Boolean	Unitless	0	An indication that the lanes or tracks of a divided land transportation route (for example: a road or a railway) are separated by a vertical median barrier. [Description] Often used to separate opposing flows of traffic in order to improve safety. For example, may be a substantial concrete barrier of approximately 1 metre height.	
<i>allowed values:</i> False			No Information			True	
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i> No Information							
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i> No Information							
One-way	1	No Information	Boolean	Unitless	0	An indication that a thoroughfare is intended to be used only in a single direction. [Description] For example, a metropolitan street grid may include streets designated for one-way use in order to improve traffic flow; usually there is a paired parallel street nearby designated for one-way use in the opposite direction. A thoroughfare is a public way, unobstructed and forming a route (for example: a road or a path) between two places.	
<i>allowed values:</i> False			No Information			True	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.	
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation	Intact Under Construction
Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).	
<i>allowed values:</i> Depressed Raised			Level			No Information	Not Applicable
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
<i>allowed values:</i> U							
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values:	No Information					
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values:	No Information					
Road Interchange Ramp	1	No Information	Boolean	Unitless	0	An indication that a road serves as a section of a road interchange, providing traffic access from one through road to another, but does not itself carry through traffic. [Description] Through roads normally are located on separate vertical levels, thus affording uninterrupted traffic flow, with at least one road being supported by a bridge and the other proceeding through an underpass. In the case of a rotary interchange on a single level there is no uninterrupted through route, therefore all traffic flows pass along road interchange ramps.
allowed values:	False		No Information			True
Route Pavement Information : Road Weather Restriction	1	No Information	Enumeration	Unitless	0	The type of weather conditions under which a road is usable.
allowed values:	All-weather No Information		Closed in Winter Other			Fair-weather Winter Only Limited All-weather
Route Desgination Type	3	No Information	Enumeration	Unitless	0	The type of a road network according to the nature of service that it is intended to provide, as designated by international, national and/or other administrative authorities.
allowed values:	International No Information		Local Other			National Secondary National Motorway
Route Designation	3	No Information	String	Unitless	24	The official designation assigned to a route. [Description] For example, 'I-95', 'A-1', 'E-6', or 'M-5'.
allowed values:	No Information					
Route Median Width	1	[-999999, -999999]	REAL_Interval	Metre	0	The width of a divider that separates adjacent route lanes or tracks in a land transportation route. [Description] The adjacent route lanes may carry traffic in opposing directions (for example: a divided highway or a dual track railway) or in the same direction (for example: a high-speed 'thru' lane and a local collector/distributor lane).
allowed values:	[-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval		Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
Route Pavement Information : Route Minimum Travelled Way Width	1	-999999	REAL	Metre	0	The minimum width of the travelled way of a route. [Description] Excludes pavements and shoulders.
allowed values:	-999999					

Route Pavement Information : Route Surface Composition	1	No Information	Enumeration	Unitless	0	The composition(s) of a durable surface (for example: a pavement) intended to sustain ground traffic (for example: vehicular traffic or foot traffic). [Description] Depending on the traffic situation (for example: on a floor, in a courtyard, or on a road) different compositions may be used, however in general such surfaces are composed of pieces of a hard material fitted closely together (for example: cobble-stone or brick) or of an undivided hard layer (for example: concrete) so as to give a compact, uniform, and smooth surface.
<i>allowed values:</i>	Aggregate		Asphalt			Asphalt over Concrete
	Brick		Cobble-stone			Concrete
	Flexible Pavement		Graded rolled or oiled sand			Ice
	Metal		No Information			Other
	Snow		Stabilized Earth			Unimproved
	Wood Plank					Bound Surface
						Corduroy
						Macadam
						Rigid Pavement
						Wood
Route Total Usable Width	1	-999999	REAL	Metre	0	The total usable width of the travelled way of a route. [Description] Includes pavements and shoulders.
<i>allowed values:</i>	-999999					
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i>	No Information					
Supported by Bridge Span	1	No Information	Boolean	Unitless	0	The object is at least partially supported by, or passes across, a bridge span. [Description] For example, an aqueduct carried across a valley by one or more bridge spans.
<i>allowed values:</i>	False		No Information			True
Surface Slope	1	[-999999, -999999]	REAL_Interval	Percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.
<i>allowed values:</i>	[-999999, -999999]		Closed Interval			Greater-than or Equal Semi-interval
	Greater-than to Less-than-or-equal Interval		Greater-than-or-equal to Less-than Interval			Less-than or Equal Semi-interval
	Open Interval					Greater-than Semi-interval
						Less-than Semi-interval
Survey Coverage Category	1	No Information	Enumeration	Unitless		A general evaluation of the coverage quality of a survey, as a category. [Description] See possibly accompanying Attribute: 'Position Quality Category' for additional survey-related information.
<i>allowed values:</i>	No Information		Surveyed			Unsurveyed
Thoroughfare Type	1	No Information	Enumeration	Unitless	0	The type of a thoroughfare based on its design. [Description] A thoroughfare is a public way, unobstructed and forming a route (for example: a road or a path) between two places. The thoroughfare type may be used in proper names and thus to represent the components of a postal address in concert with Attributes: 'Address Number', 'Address Direction Prefix', 'Thoroughfare Name', and 'Address Direction Suffix'.
<i>allowed values:</i>	Avenue		Boulevard			Circle
	Drive		Lane			Limited Access Motorway
	No Information		Other			Parkway
	Road		Street			Tank Trail
						Close
						Motorway
						Place
						Terrace
Through Route	1	No Information	Boolean	Unitless	0	An indication that a route (for example: a road) passes through (both into and out of) a place (for example: an urban area) without interruption. [Description] A through route may have devices (for example: a traffic light) to control traffic flow.
<i>allowed values:</i>	False		No Information			True
Track or Lane Count	1	-999999	REAL	Unitless	0	The total number of independent, parallel paths (for example: a railway track and/or a road lane) in both directions within a route.
<i>allowed values:</i>	-999999					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i>	No Information					
Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
<i>allowed values:</i>	Below Ground Surface		No Information			On Surface
						On Waterbody Bottom

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
-------	---	---------	------	-------	---	--

allowed values: -999999

Width of Second Travelled Way	1	-999999	REAL	Metre	0	The width of a second travelled way that is the lesser width of the two travelled ways in a divided highway.
-------------------------------	---	---------	------	-------	---	--

allowed values: -999999

Feature RoadInterchange (Area 00) New ☐ Road Interchange

A connection designed to provide traffic access from one road to another.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Contained within Tunnel	1	No Information	Boolean	Unitless	0	The object is at least partially located within, or passes through, a tunnel. [Description] For example, a canal passing through a tunnel.
<i>allowed values:</i> False			No Information			True
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Military Private			International National State			Interstate No Information Joint Military and Civilian Other
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AP020	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AP020						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values:	-999999					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values:	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values:	No Information					
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values:	False		No Information		True	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
allowed values:	Damaged		Destroyed		Dismantled	
	No Information		Ruined		Site Preparation	
	Unmaintained				Intact	
					Under Construction	
Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).
allowed values:	Depressed		Level		No Information	
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
allowed values:	U					
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

New Route Designation Type	3	No Information	Enumeration	Unitless	0	The type of a road network according to the nature of service that it is intended to provide, as designated by international, national and/or other administrative authorities.
<i>allowed values:</i> International No Information			Local Other			National Secondary National Motorway
Route Designation	3	No Information	String	Unitless	24	The official designation assigned to a route. [Description] For example, 'I-95', 'A-1', 'E-6', or 'M-5'.
<i>allowed values:</i> No Information						
Route Pavement Information : Route Minimum Travelled Way Width	1	-999999	REAL	Metre	0	The minimum width of the travelled way of a route. [Description] Excludes pavements and shoulders.
<i>allowed values:</i> -999999						
Route Pavement Information : Route Surface Composition	1	No Information	Enumeration	Unitless	0	The composition(s) of a durable surface (for example: a pavement) intended to sustain ground traffic (for example: vehicular traffic or foot traffic). [Description] Depending on the traffic situation (for example: on a floor, in a courtyard, or on a road) different compositions may be used, however in general such surfaces are composed of pieces of a hard material fitted closely together (for example: cobble-stone or brick) or of an undivided hard layer (for example: concrete) so as to give a compact, uniform, and smooth surface.
<i>allowed values:</i> Aggregate Brick Flexible Pavement No Information Stabilized Earth			Asphalt Cobble-stone Ice Other Unimproved			Asphalt over Concrete Concrete Macadam Rigid Pavement Wood Bound Surface Corduroy Metal Snow Wood Plank
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Supported by Bridge Span	1	No Information	Boolean	Unitless	0	The object is at least partially supported by, or passes across, a bridge span. [Description] For example, an aqueduct carried across a valley by one or more bridge spans.
<i>allowed values:</i> False			No Information			True
Surface Slope	1	[-999999, -999999]	REAL_Interval	Percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.
<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval

Thoroughfare Type	1	No Information	Enumeration	Unitless		The type of a thoroughfare based on its design. [Description] A thoroughfare is a public way, unobstructed and forming a route (for example: a road or a path) between two places. The thoroughfare type may be used in proper names and thus to represent the components of a postal address in concert with Attributes: 'Address Number', 'Address Direction Prefix', 'Thoroughfare Name', and 'Address Direction Suffix'.
<i>allowed values:</i>	Limited Access Motorway Road		No Information Roundabout			Other Street Ramp
Through Route	1	No Information	Boolean	Unitless	0	An indication that a route (for example: a road) passes through (both into and out of) a place (for example: an urban area) without interruption. [Description] A through route may have devices (for example: a traffic light) to control traffic flow.
<i>allowed values:</i>	False		No Information			True
Track or Lane Count	1	-999999	REAL	Unitless	0	The total number of independent, parallel paths (for example: a railway track and/or a road lane) in both directions within a route.
<i>allowed values:</i>	-999999					
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i>	No Information					
Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
<i>allowed values:</i>	Below Ground Surface		No Information			On Surface On Waterbody Bottom
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature RoadInterchange (Point 00)New ☐ Road Interchange**A connection designed to provide traffic access from one road to another.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Contained within Tunnel	1	No Information	Boolean	Unitless	0	The object is at least partially located within, or passes through, a tunnel. [Description] For example, a canal passing through a tunnel.
<i>allowed values:</i>	False		No Information			True
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i>	Civilian Military Private		International National State			Interstate No Information Joint Military and Civilian Other
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i>	No Information Partially Operational		Non-operational Planned			Not in Operation Temporarily Non-operational Operational

New	Feature Code	1	AP020	CONSTRAINED_ STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AP020						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999						
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False			No Information		True	
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction
	Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).
	<i>allowed values:</i> Depressed			Level		No Information	Raised
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<i>allowed values:</i> U						
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature RoadsideRestArea (Area 00)

New ☐ Roadside Rest Area

A roadside place usually having facilities for people and/or vehicles.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AQ135	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AQ135						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Convenience Store No Information Restroom			Food Service Other Retail Telecommunications			Meeting Place Petrol Sale Navigation Restaurant
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999

[Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: <i>No Information</i>							

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature RoadsideRestArea (Point 00)

New ☐ Roadside Rest Area

A roadside place usually having facilities for people and/or vehicles.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AQ135	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AQ135						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Convenience Store No Information Restroom			Food Service Other Retail Telecommunications			Meeting Place Petrol Sale Navigation Restaurant
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information		True	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Rock Formation Structure	1	No Information	Enumeration	Unitless	0	The structure of a significant outcropping of exposed rock.
<i>allowed values:</i> Columnar Other			Fossilized Forest Pinnacle			Needle No Information
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Roundhouse (Area 00)

New ☐ Roundhouse

A circular or semicircular building, with a railway turntable in the centre, used for storing and/or repairing railway locomotives. [Description] The railway turntable may be either completely covered, partially covered or not covered, and partially or completely surrounded by the building.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
allowed values: No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
allowed values: False			No Information			True
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
allowed values: -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
allowed values: Civilian National State			International No Information			Joint Military and Civilian Military Other Private
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
allowed values: No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AN076	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: AN076						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
allowed values: No Information Warehousing and Storage			Other			Railway Transport Railway Vehicle Repair
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values: No Information						

Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
<i>allowed values:</i> Accurate			Approximate			Doubtful
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction

Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
allowed values:	Adobe Brick Other Wood		Concrete Prestressed Concrete		Masonry Reinforced Concrete	No Information Steel
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999	Real	Metre		The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Feature Runway (Area 00)New ☐ Runway**A defined rectangular area on a land aerodrome prepared for the landing and take-off of aircraft.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aerodrome Elevation	1	-999999	REAL	Metre	0	The vertical distance above Mean Sea Level (MSL) of the highest point of the landing area.
<i>allowed values:</i> -999999						
Aerodrome Pavement Information : Aerodrome Movement Area Surface Category	1	No Information	Enumeration	Unitless	0	The level of preparation of the aerodrome movement area surface, as a category. [Description] Common category types may range from natural to completely paved.
<i>allowed values:</i> Completely Paved No Information Unpaved			<i>Flexible Pavement</i> Other Unprepared			<i>Grass/Sod (Soft)</i> Partially Paved <i>Mostly Paved</i> <i>Stabilized Earth</i>
Aerodrome Pavement Information : Aerodrome Movement Area Surface Composition	3	No Information	Enumeration	Unitless	0	The type of the predominant material of which a surface of the movement area is composed. [Description] Example surfaces include: asphalt, concrete, or grass.
<i>allowed values:</i> Asphalt Clay Gravel Macadam Other Stone			Asphalt Over Concrete Concrete Ice Membrane Pierced Steel Planking Water			Bituminous Mix Coral Landing Mat <i>No Information</i> Sand Wood Brick Earthen Laterite Non-bituminous Mix Snow

Aerodrome Pavement Information : Aerodrome Movement Area Surface Preparation Method	3	No Information	Enumeration	Unitless	0	The preparation technique(s) applied to a surface composition.
allowed values: Aggregate Seal Coat No Information Rolled			Graded Oiled Rubberized Seal Coat			Grass Other Grooved Porous Friction Course
Aerodrome Pavement Information : Aerodrome Pavement Functional Status	1	No Information	Enumeration	Unitless	0	The functional status of the pavement of an aerodrome movement area. [Description] An aerodrome movement area is that part of an aerodrome to be used for aircraft movement operations, consisting of the manoeuvring area and the apron(s).
allowed values: Fair No Information Unserviceable			Fair Estimated Poor			Good Poor Estimated Good Estimated Under Construction
Aerodrome Surface Status	1	No Information	Enumeration	Unitless	0	The operational status of an aerodrome movement area, as a category. [Description] For example: serviceable, unserviceable, closed, or work-in-progress.
allowed values: Closed Work in Progress			No Information			Open Parked or Disabled Aircraft
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
allowed values: Civilian National State			International No Information			Joint Military and Civilian Other Military Private
Deck Level	1	-999999	REAL	Unitless	0	The relative level of a deck within a set of vertically stacked decks, one over another, in a transportation structure (for example: on a bridge or in a tunnel). [Description] The lowest deck is numbered '1' and the remaining decks are numbered in ascending order (bottom to top) with the uppermost deck being assigned the highest value.
allowed values: -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
allowed values: No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	GB055	CONSTRAINED_ STRING	Unitless	5	Feature Code
allowed values: GB055						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values: No Information						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
allowed values: -999999						
Horizontal Accuracy Category	1	No Information	Enumeration	Unitless		A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
allowed values: Accurate			Approximate			Doubtful No Information
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999						

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Runway Direction (low end) : Runway Designator (low)	1	No Information	String	Unitless	14	The designator of the runway that is used to uniquely identify it at an aerodrome. [Description] This may be used to identify either both directions of the runway (for example: '09/27' or '02R/20L') or one direction independently (for example: '27', '35L', '01R').
<i>allowed values:</i> No Information						
<i>allowed values:</i> No Information						
Runway Direction (low end) : Runway True Heading (low)	1	-999999	Real	Arc Degree		The true heading of a runway.
<i>allowed values:</i> -999999						
<i>allowed values:</i> -999999						

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
New Surface Permanence	1	No Information	Enumeration	Unitless	0	The permanence of the surface material.
<i>allowed values:</i> Natural			No Information			Permanent Temporary
Runway Direction (low end) : Surface Slope (low)	1	[-999999, -999999]	REAL_Interval	Percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.
<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
<i>allowed values:</i> [-999999, -999999] Greater-than to Less-than-or-equal Interval Open Interval			Closed Interval Greater-than-or-equal to Less-than Interval			Greater-than or Equal Semi-interval Less-than or Equal Semi-interval Greater-than Semi-interval Less-than Semi-interval
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<i>allowed values:</i>			Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)	Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)	Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)
Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature SandDunes (Area 00)New ☐ Sand Dunes**One or more mounds or ridges of sand usually formed by the wind.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Feature Code	1	DB170	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> DB170						
Feature Element Orientation	1	[-999999, -999999]	Real_Interval	Arc Degree		The angular distance measured from true north (0 degrees) clockwise to the predominant linear pattern of the elements within a feature.
<i>allowed values:</i> [-999999, -999999]			-999999			
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). Feature Scoreboard (Point 00)

New ☐ Scoreboard

A large outdoor board for publicly displaying the score in an athletic event. [Description] Usually associated with a sports stadium or major playing field.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AK161	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AK161						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Height of Object	1	-999999	REAL	Metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999						

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False			No Information		True	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<u>allowed values:</u> Damaged No Information Unmaintained			Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<u>allowed values:</u> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.

allowed values: No Information

Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
---	---	----------------	--------	----------	-----	--

allowed values: No Information

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
----------------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
--------------------------	---	----------------	--------	----------	-----	--

allowed values: No Information

Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
---------------------------------	---	----------------	--------	----------	----	---

Feature SeaplaneRun (Area 00)New ☐ Seaplane Run**A designated portion of water that is outlined by visual surface markings and used by seaplanes to land and take-off.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<u>allowed values:</u> -999999						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a facility, as a whole.
<u>allowed values:</u> No Information			Not in Operation			Operational Partially Operational
New Feature Code	1	GB070	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> GB070						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.

allowed values: -999999

Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
allowed values: -999999							
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
allowed values: No Information							
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
allowed values: No Information

[Description] No restriction is placed on its length.	
<i>allowed values:</i>	No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i>	No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.	
<i>allowed values:</i>	False		No Information		True		
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.	
<i>allowed values:</i>	Damaged No Information Unmaintained		Destroyed Ruined		Dismantled Site Preparation		Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.	
<i>allowed values:</i>	U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
allowed values: No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature SettlingPond (Area 00)

New ☐ Settling Pond

A small reservoir where solid matter is precipitated from a liquid by evaporating or settling.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999, -999999]			No Information			
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AC030	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AC030						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. Feature SewageTreatmentPlant (Area 00)

New ☐ Sewage Treatment Plant

An operational area with buildings and other facilities for the purification of wastewater.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre		The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999						
Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999, -999999]			No Information			
Manufacturing Information : By-product	3	No Information	Enumeration	Unitless	0	The principal by-product(s) of a production, mining, or agricultural activity. [Description] If multiple by-products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Ash Other Sewage			Cinders Radioactive Material Slag			No Byproduct Refuse No Information Scrap-metal
New Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999						
New Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
New Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999						
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values:</i> -999999						
New Water Resource Information : Device Power Type	1	No Information	Enumeration	Unitless	0	The method by the device is powered, if any.
<i>allowed values:</i> Compressed Air No Information			Electricity Other			Gravity Petroleum Product Manual Steam
New Water Resource Information : Device Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the device and the underlying ground (terrain), liquid or waterbody bottom.
<i>allowed values:</i> Above Surface On Waterbody Bottom			Below Ground Surface Other			No Information Submerged On Surface
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational

New	Feature Code	1	AC507	CONSTRAINED_ STRING	Unitless	5	Feature Code
	<u>allowed values:</u> AC507						
	Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
	Geographic Name Type	3	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Other			Historical Transliterated Provisional			Native Transliterated Unverified Transliterated No Information Variant Transliterated
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999						
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999						
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999						
	Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
	<u>allowed values:</u> False			No Information			True
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<u>allowed values:</u> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information			True
New	Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<u>allowed values:</u> -999999						
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<u>allowed values:</u> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction

	Predominant Average Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second	The average water velocity, exclusive of high water due to runoff or low water due to drought.	
	<i>allowed values:</i> [-999999, -999999]			No Information			
	Predominant Maximum Water Depth	1	[-999999, -999999]	Real_Interval	Metre	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.	
	<i>allowed values:</i> [-999999, -999999]			No Information			
	Predominant Maximum Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second	The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.	
	<i>allowed values:</i> [-999999, -999999]						
	Predominant Minimum Water Depth	1	[-999999, -999999]	Real_Interval	Metre	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.	
	<i>allowed values:</i> [-999999, -999999]			No Information			
	Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
	<i>allowed values:</i> Chemical Water			No Information		Other	Sewage
New	Water Resource Information : Pump Type	1	No Information	Enumeration	Unitless	0	The type of pump used to move liquid or semi-liquid material from one location to another.
	<i>allowed values:</i> Airlift No Information Turbine			Centrifugal Other Vacuum		Gravity Reciprocating	Jet Rotary
New	Water Resource Information : Purification Process	5	No Information	Enumeration	Unitless	0	Water purification process
	<i>allowed values:</i> Blending Filtration No Information Vapor Compression			Desalination Freezing Other		Disinfection Multi-effect evaporation Reverse Osmosis	Electrolysis Multi-stage flash Sedimentation/coagulation
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<i>allowed values:</i> U						
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
	<i>allowed values:</i> Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) No Information Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)			Army Geographic Centre (Spain) Defence Geographic Centre Intelligence Collection Group (United Kingdom) Geographic Service (Belgium) Hellenic Military Geographic Service (Greece) Military Geographic Group (Estonia) Military Topographic Directorate (Romania) Other U.S. Africa Command (USAFRICOM) U.S. Central Command (USCENTCOM) U.S. Department of Energy (DOE) U.S. Federal Bureau of Investigation (FBI) U.S. National Civil Applications Program (NCAP) U.S. National Security Agency (NSA) U.S. Southern Command (USSOUTHCOM)		Army Geographic Institute (Portugal) Defence Imagery and Geospatial Organisation (Australia) Geographic Service of the Czech Armed Forces (Czech Republic) Joint Geography Bureau (France) Military Geographic Service (Norway) Military Topographic Service (Bulgaria) Swedish Armed Forces (Sweden) U.S. Air Force U.S. Central Intelligence Agency (CIA) U.S. Department of Homeland Security (DHS) U.S. Geological Survey (USGS) U.S. National Geospatial-Intelligence Agency (NGA) U.S. Navy U.S. Special Operations Command (USSOCOM)	Bundeswehr Geoinformation Office (Germany) Defense Information Security (Italy) Geospatial Information Agency (Latvia) Mapping and Charting Establishment (Canada) Military Geography Division (Poland) National Army Topographic Service (Moldova) Topographic Institute (Slovakia) U.S. Army U.S. Coast Guard U.S. Department of State U.S. Joint Forces Command (USJFCOM) U.S. National Oceanic and Atmospheric Administration U.S. Northern Command (USNORTHCOM) U.S. Strategic Command (USSTRATCOM)

	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
	<u>allowed values:</u> No Information						
	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
	<u>allowed values:</u> No Information						
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
	<u>allowed values:</u> No Information						
New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units		The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<u>allowed values:</u> -999999						
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
	<u>allowed values:</u> No Information						
	Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
	<u>allowed values:</u> Adobe Brick Fibreglass Metal Plant Material Steel			Aluminum Glass Mud-based Construction Prestressed Concrete Stone		Brick Iron No Information Reinforced Concrete Treated Timber	Concrete Masonry Other Sod Wood
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime		The electrical conductivity of water.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Water Flow	1	-999999	Real	Cubic Metres per Second	0	The rate of water flow through or exiting from a feature.
	<u>allowed values:</u> -999999						
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre		The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.
	<u>allowed values:</u> -999999						
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless		The type of available water based on its composition.

	allowed values:	Alkaline Mineral Saline		Brackish No Information Seawater		Brine Not Applicable		Fresh Other
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.		
	allowed values:	Agricultural Irrigation Institutional Other		Commercial Livestock Power Generation		Domestic Irrigation Municipal Recreational		Industrial No Information Sanitary Domestic
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.	
	allowed values:	-999999						
	Wireless Telecommunication Information : Wireless Telecommunication Type	1	No Information	Enumeration	Unitless	0	The type of a wireless telecommunication service based on the mechanism(s) of transmission and/or the nature of the communication(s) supported. [Description] For example, radio broadcast or mobile phone service.	
	allowed values:	Cellular Phone Other Television (TV)		Microwave Radio Relay Radio Broadcast		Mobile Phone Radio Telephone		No Information Radio-telegraph

Feature SewageTreatmentPlant (Point 00)

New ☐ Sewage Treatment Plant

An operational area with buildings and other facilities for the purification of wastewater.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
allowed values: No Information						
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
allowed values: -999999						
New	Water Resource Information : Arsenic Concentration	1	-999999	Real	Milligrams per Litre	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
allowed values: -999999						
Average Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
allowed values: [-999999, -999999]						
Manufacturing Information : By-product	3	No Information	Enumeration	Unitless	0	The principal by-product(s) of a production, mining, or agricultural activity. [Description] If multiple by-products are specified then they are usually listed in descending order of importance.
allowed values: Ash		Cinders		No Byproduct		No Information
Other		Radioactive Material		Refuse		Scrap-metal
Sewage		Slag				

New	Water Resource Information : Chloride Concentration	1	-999999	Real	Milligrams per Litre		The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<i>allowed values:</i>	-999999					
New	Water Resource Information : Coliform Concentration	1	-999999	Real	Coliform Microbial Density		The number of coliform bacteria per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of man and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<i>allowed values:</i>	-999999					
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i>	Civilian National Public		International No Information State		Joint Military and Civilian Other	Military Private
New	Water Resource Information : Cyanide Concentration	1	-999999	Real	Milligrams per Litre		The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i>	-999999					
New	Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
	<i>allowed values:</i>	-999999					
New	Water Resource Information : Device Power Type	1	No Information	Enumeration	Unitless	0	The method by the device is powered, if any.
	<i>allowed values:</i>	Compressed Air No Information		Electricity Other		Gravity Petroleum Product	Manual Steam
New	Water Resource Information : Device Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the device and the underlying ground (terrain), liquid or waterbody bottom.
	<i>allowed values:</i>	Above Surface On Waterbody Bottom		Below Ground Surface Other		No Information Submerged	On Surface
	Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
	<i>allowed values:</i>	No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational	Operational
New	Feature Code	1	AC507	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i>	AC507					
	Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i>	No Information					
	Geographic Name Type	3	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i>	Conventional Other		Historical Transliterated Provisional		Native Transliterated Unverified Transliterated	No Information Variant Transliterated
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i>	-999999					
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i>	-999999					

	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999						
	Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
	<i>allowed values:</i> False			No Information			True
New	Water Resource Information : Magnesium Concentration	1	-999999	Real	Milligrams per Litre		The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<i>allowed values:</i> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False			No Information			True
New	Water Resource Information : pH of Water	1	-999999	Real	Milligrams per Litre		The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more basic and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<i>allowed values:</i> -999999						
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
	<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction
	Predominant Average Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average water velocity, exclusive of high water due to runoff or low water due to drought.
	<i>allowed values:</i> [-999999, -999999]			No Information			
	Predominant Maximum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<i>allowed values:</i> [-999999, -999999]			No Information			
	Predominant Maximum Water Velocity	1	[-999999, -999999]	Real_Interval	Metres per Second		The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.
	<i>allowed values:</i> [-999999, -999999]						
	Predominant Minimum Water Depth	1	[-999999, -999999]	Real_Interval	Metre		The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<i>allowed values:</i> [-999999, -999999]			No Information			
	Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
	<i>allowed values:</i> Chemical Water			No Information		Other	Sewage
New	Water Resource Information : Pump Type	1	No Information	Enumeration	Unitless	0	The type of pump used to move liquid or semi-liquid material from one location to another.
	<i>allowed values:</i> Airlift No Information Turbine			Centrifugal Other Vacuum		Gravity Reciprocating	Jet Rotary

New	Water Resource Information : Purification Process	5	No Information	Enumeration	Unitless	0	Water purification process
<i>allowed values:</i> <i>Blending</i> <i>Filtration</i> <i>No Information</i> <i>Vapor Compression</i>							
<i>Desalination</i> <i>Freezing</i> <i>Other</i>							
<i>Disinfection</i> <i>Multi-effect evaporation</i> <i>Reverse Osmosis</i>							
<i>Electrolysis</i> <i>Multi-stage flash</i> <i>Sedimentation/coagulation</i>							
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> <i>U</i>							
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.
<i>allowed values:</i> Army Geographic Agency (Netherlands) Defence Acquisition and Logistics Organization (Denmark) General Command of Mapping (Turkey) Geospatial Intelligence Organisation (New Zealand) Mapping Service (Hungary) Military Mapping Centre (Lithuania) <i>No Information</i> Topographic Service (Finland) U.S. Army Geospatial Center (AGC) U.S. Defense Intelligence Agency (DIA) U.S. European Command (USEUCOM) U.S. Marine Corps U.S. National Reconnaissance Office (NRO) U.S. Pacific Command (PACOM) U.S. Transportation Command (USTRANSCOM)

	Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> <i>No Information</i>							
	Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> <i>No Information</i>							
	Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> <i>No Information</i>							
New	Water Resource Information : Sulfate Concentration	1	-999999	Real	Milligrams per Litre		The mass of sulfate ions per volume of solution.
<i>allowed values:</i> <i>-999999</i>							
New	Water Resource Information : Temperature	1	-999999	Real	Degree Celsius		The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> <i>-999999</i>							
New	Water Resource Information : Total Dissolved Solids	1	-999999	Real	Milligrams per Litre		The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> <i>-999999</i>							

New	Water Resource Information : Turbidity	1	-999999	Real	Nephelometric Turbidity Units	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).	
<i>allowed values:</i> -999999							
	Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information							
	Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i>				Adobe Brick	Aluminum	Brick	Concrete
				Fibreglass	Glass	Iron	Masonry
				Metal	Mud-based Construction	No Information	Other
				Plant Material	Prestressed Concrete	Reinforced Concrete	Sod
				Steel	Stone	Treated Timber	Wood
New	Water Resource Information : Water Conductivity	1	-999999	Real	MicroSiemens per Centime	The electrical conductivity of water.	
<i>allowed values:</i> -999999							
New	Water Resource Information : Water Flow	1	-999999	Real	Cubic Metres per Second	0	The rate of water flow through or exiting from a feature.
<i>allowed values:</i> -999999							
New	Water Resource Information : Water Hardness	1	-999999	Real	Milligrams per Litre	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water). The term 'hardness' comes from the fact that it is hard to form bubbles ('suds') using soap or detergents in 'hard' water.	
<i>allowed values:</i> -999999							
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	The type of available water based on its composition.	
<i>allowed values:</i>				Alkaline	Brackish	Brine	Fresh
				Mineral	No Information	Not Applicable	Other
				Saline	Seawater		
New	Water Resource Information : Water Use	3	No Information	Enumeration	Unitless	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing and irrigation.	
<i>allowed values:</i>				Agricultural Irrigation	Commercial	Domestic Irrigation	Industrial
				Institutional	Livestock	Municipal	No Information
				Other	Power Generation	Recreational	Sanitary Domestic
	Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999							
	Wireless Telecommunication Information : Wireless Telecommunication Type	1	No Information	Enumeration	Unitless	0	The type of a wireless telecommunication service based on the mechanism(s) of transmission and/or the nature of the communication(s) supported. [Description] For example, radio broadcast or mobile phone service.
<i>allowed values:</i>				Cellular Phone	Microwave Radio Relay	Mobile Phone	No Information
				Other	Radio Broadcast	Radio Telephone	Radio-telegraph
				Television (TV)

Feature ShantyTown (Area 00)New ☐ Shanty Town

A section of a built-up area consisting chiefly of densely packed shacks and having few, if any, streets and no public facilities. [Description] Usually located on the outskirts of the built-up area. The shacks are generally crude, improvised, and made from salvaged materials.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AL208	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL208						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Homeless Shelter Other			Leprosy Care Refugee Shelter			Migrant Labour Residence No Information
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined			Dismantled Site Preparation Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
<i>allowed values:</i> No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

allowed values: No Information

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999						
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999						
New	Least Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling.
	<u>allowed values:</u> -999999						
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Predominant Feature Height	1	-999999	REAL	Metre	0	The predominant height (the height of at least 50 percent) of the feature measured from the lowest point of the base at ground or water level (downhill side/downstream side).
	<u>allowed values:</u> -999999						
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
	<u>allowed values:</u> U						
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.
allowed values: No Information						
Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
allowed values: No Information						
Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
allowed values: No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
<i>allowed values:</i> No Information						
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.
<i>allowed values:</i> No Information						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Adobe Brick Iron No Information Steel			Aluminum Masonry Other Stone			Concrete Metal Plant Material Wood Fibreglass Mud-based Construction Sod
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature ShipElevator (Area 00)New ☐ Ship Elevator

A device used to raise ships vertically between water bodies with different elevations. [Description] Normally ship elevators consist of water filled chambers which can be raised or lowered by means of mechanical devices. Commonly used to move ships between canals where locks would be impractical.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian National Public			International No Information State			Joint Military and Civilian Other Military Private
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.

		<i>allowed values:</i> No Information <i>Partially Operational</i>	Non-operational Planned		Not in Operation Temporarily Non-operational		<i>Operational</i>
New	Feature Code	1	BI006	CONSTRAINED_ STRING	Unitless	5	Feature Code
		<i>allowed values:</i> BI006					
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
		<i>allowed values:</i> No Information					
	Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
		<i>allowed values:</i> -999999					
	Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
		<i>allowed values:</i> -999999					
	Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
		<i>allowed values:</i> -999999					
New	Maximum Water Depth	1	-999999	Real	Metre		Maximum water depth the object was designed to hold.
		<i>allowed values:</i> -999999					
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
		<i>allowed values:</i> No Information					
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
		<i>allowed values:</i> No Information					
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
		<i>allowed values:</i> False	No Information		True		
New	Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
		<i>allowed values:</i> Damaged No Information Unmaintained	Destroyed Ruined		Dismantled Site Preparation Intact Under Construction		
	Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
		<i>allowed values:</i> U					
	Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Feature ShipElevator (Point 00)New ☐ Ship Elevator

A device used to raise ships vertically between water bodies with different elevations. [Description] Normally ship elevators consist of water filled chambers which can be raised or lowered by means of mechanical devices. Commonly used to move ships between canals where locks would be impractical.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information		True	

Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> <div>Civilian</div> <div>National</div> <div>Public</div> <div>International</div> <div>No Information</div> <div>State</div> <div>Joint Military and Civilian</div> <div>Other</div> <div>Military</div> <div>Private</div>						
New Deepest Depth Below Surface Level	1	-999999	Real	Metre		The distance measured from the surface ground or water level (uphill/upstream side of the feature) to the deepest point of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.

New Feature Code	1	BI006	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BI006						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
New Maximum Water Depth	1	-999999	Real	Metre		Maximum water depth the object was designed to hold.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.	
<i>allowed values:</i> No Information							
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.	
<i>allowed values:</i> No Information Steel			Other Treated Timber			Prestressed Concrete Wood	Reinforced Concrete
Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.	
<i>allowed values:</i> No Information							
Usable Length	1	-999999	REAL	Metre	0	The interior length of a structure (for example: an aircraft bunker or a lock). [Description] The length is taken along the primary alignment of the structure. If the structure is irregular in shape the length is along its greatest horizontal dimension, else if the structure is regular in shape then a shape-specific rule may apply: for a rectangular structure, the length of the longer axis; for a round structure, the diameter.	
<i>allowed values:</i> -999999							

Usable Width	1	-999999	REAL	Metre	0	The interior width of a structure. [Description] For example, an aircraft bunker or a lock.
<i>allowed values:</i> -999999						
Vertical Obstruction Identifier	1	No Information	String	Unitless	14	Identification code that uniquely identifies a feature that is a vertical obstruction to low-level flight. [Description] Although parts of the identifier include digits it can also consist of non-numeric characters.
<i>allowed values:</i> No Information						
Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature ShippingContainer (Area 00)New ☐ Shipping Container

A moveable container used for the shipping of solid, liquid, or gaseous materials. [Description] The container may be either closed on all sides or open on the top or along a side. With minor modifications, if needed, shipping containers may be used for non-traditional purposes including, for example: emergency shelter, housing, retail activities, warehousing and secure space.

allowed values:		Aluminum Metal Reinforced Concrete		Concrete No Information Steel	Iron Other Treated Timber		Masonry Prestressed Concrete Wood	

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						
Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.

allowed values: -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

Feature ShoppingComplex (Area 00)

New ☐ Shopping Complex

A commercial facility tenanted by multiple retail stores (for example: household goods, clothing, or books), restaurants (for example: a food court), entertainment venues (for example: a movie theatre or electronic games arcade), and/or other businesses (for example: professional services), that is completely enclosed, climate controlled, has a common public arcade (for example: furnished with decorative plantings, benches, and/or fountains) and a common vehicle parking area (for example: a parking lot or parking garage). [Description] When the commercial entrances open onto the interior of the complex (public access being by means of central entries and broad corridors) it may consist of multiple levels connected by escalators and is often termed a 'shopping mall'. When the commercial entrances open towards the exterior of the complex and access to individual commercial entrances is directly from an adjacent vehicle parking area it consists of a single level and is often termed a 'shopping centre' or 'shopping plaza'.

Area	1	-999999	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999						
Facility Operational Status	1	No Information	Enumeration	Unitless		The status of operation of a facility, as a whole.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational <i>Operational</i>
New Feature Code	1	AG030	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AG030						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i>			Accommodation Amusement Beauty Treatment Community Centre Electrical Equipment Repair Emergency Shelter Fitness Centre Government Laundry Meeting Place Museum Other Photography Professional, Scientific and Technical Restaurant Retail Service Specialized Store Theatre	Accounting Aquarium Business and Personal Support Services Convenience Store Electronic Equipment Repair Emergency Youth Shelter Food Service Grocery Law Enforcement Military Recruitment Night Club Petrol Sale Place of Worship Public Health Activities Restroom Retail Telecommunications Sports, Amusement and Recreation Travel Agency	Adult Entertainment Banquet Hall Cinema Cultural, Arts and Entertainment Emergency Operations Employment Agency Gambling Human Health Activities Legal Activities Motor Vehicle Parking No Information Pet-shop Postal Activities Real Estate Activities Retail Banking Security Services Station Urgent Medical Care	Advertising Bar Commerce Day Care Emergency Relief Services Financial Services General Repair Insurance Market Motor Vehicle Rental Non-specialized Store Pharmacy Print Publishing Recreation Retail Sale Social Work Telecommunications Vocational Education
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
Height Above Surface Level	1	-999999	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999						

Highest Elevation	1	-999999	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999						
Length	1	-999999	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, and/or location make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information		True	
New Physical Condition	1	No Information	Enumeration	Unitless		The physical state of a structure, or site, as a whole.
<i>allowed values:</i> Damaged No Information Unmaintained			Destroyed Ruined		Dismantled Site Preparation	Intact Under Construction
Restriction Information : Security Attributes Group (resource classification)	1	U	String	Unitless	8	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information.
<i>allowed values:</i> U						
Process Step Information : Resource Content Originator	1	No Information	Enumeration	Unitless	0	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'.

Restriction Information : Security Attributes Group (resource non-intelligence community markings)	1	No Information	String	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy.

allowed values: No Information

Restriction Information : Security Attributes Group (resource owner-producer)	1	No Information	String	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource.
---	---	----------------	--------	----------	-----	--

allowed values: No Information

Specified Domain Values(s)	1	No Information	String	Unitless	2E+09	One or more intended attribute enumerant values for one or more enumerated attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute enumerant values may have been previously, or may become in the future, valid members of the attribute enumerant range.
----------------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Unique Entity Identifier	1	No Information	String	Unitless	254	The globally unique and persistent identifier of an entity (for example: feature or event) instance as specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. [Description] It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures.

Width	1	-999999	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
