A solid raised way across a terrain obstacle (for example: a wetland or a body of shallow water) that is intended to support a transportation route (for example: a road or a railway). [Description] The causeway structure is often constructed from local fill supplemented by other materials (for example: rocks, boulders or gravel) and consists of a solid linear structure in the configuration of an embankment. Causeway structures are built just high enough to insure that the transportation route will remain passable during periods of flooding, tides and seasonal rainfall. Culverts may occur along the length of the causeway structure and individual sections of the causeway structure may be interrupted by bridges.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> No Information			Other			
			Private		Public	
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information			Non-operational			
			Planned		Not in Operation	
			Partially Operational		Temporarily Non-operational	
New Feature Code	1	AQ063	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AQ063						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.

<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information						
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated	Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated	
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information	True		
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information	Destroyed Unmaintained	Dismantled	

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Boulders Mud Rubble			Gravel No Information Sand			Lava Other Soil Loess Rock
Surface Slope	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.
<i>allowed values:</i> [-999999.0, -999999.0]						
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.

allowed values: Aqueduct
Railway

No Information
Road

Other

Pedestrian

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

allowed values: pimGUID

Water Level Effect	1	No Information	Enumeration	Unitless	0	The relationship between the feature and surrounding (including covering and/or underlying) water.
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values:	Horizontal Vertical Down		No Information Vertical Up			Slopes Downward	Slopes Upward
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature CaveMouth (Point)New ☐ Cave Mouth

The entrance to an interconnected series of naturally occurring subterranean chambers. [Description] Typically located in limestone, and often open to the Earth's surface either vertically or horizontally. Alterations may have been made to the cave mouth.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
allowed values: -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
allowed values: noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
allowed values: [-999999, -999999]						
Cave Information : Cave Type	1	No Information	Enumeration	Unitless	0	The type of a cave based on its dominant method of formation. [Description] A cave is a naturally occurring subterranean chamber.
allowed values: Aeolian No Information Waterbody			Erosional Other			Glacier Solution Lava Talus
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
allowed values: Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
allowed values: noInformation						
New Feature Code	1	DB029	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: DB029						
Cave Information : Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.

<i>allowed values:</i>		Defence Activities	No Information	Other		Religious Activities	
	Residence			Warehousing and Storage			
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation							
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information							
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i>		Conventional		Historical Original		Historical Transliterated	Native Original
		Native Transliterated		No Information		Other	Provisional
		Unverified Original		Unverified Transliterated		Variant Original	Variant Transliterated
	Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information							
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information							
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True	
	Overhead Clearance	1	-999999.0	REAL	metre	0	The least distance between the travelled way and any obstruction vertically above it. [Description] Reference STANAG 2253.
<i>allowed values:</i> -999999.0							
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i>		Construction		Damaged		Destroyed	Dismantled
		Intact		No Information		Unmaintained	

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat)' (CSP:Okra) (FMM:Organic Techniques) could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Cave Information : Underground Access Orientation	1	No Information	Enumeration	Unitless	0	The ground slope of the floor of the entrance at the point of access for an underground feature (for example: a cave, tunnel or underground extraction mine) as a category.
<i>allowed values:</i> Horizontal Vertical Down			No Information Vertical Up			Slopes Downward Slopes Upward
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

						Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

allowed values:	noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
allowed values:	noInformation					
Structurally-dissected	1	No Information	Boolean	Unitless	0	An indication that at least 50 percent of the terrain within an area is covered by a large number of vertical structures that are separated by ground-level passageways (for example: walkways, alleys, roads). [Description] A high concentration of vertical structures provides good cover and concealment, limits fields of observation and fire, and slows, diverts, or stops the movement of personnel or vehicles. Vertical structures are man-made features or objects, for example, buildings or non-building structures, such as, water towers, storage tanks, tombs, grave markers or memorial monuments.
allowed values:	False		No Information			True

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private		Military Public No Information	

New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	AL030	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AL030						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Religious Information : Religious Designation	1	No Information	Enumeration	Unitless	0	A designation denoting a religion or system of belief.
<i>allowed values:</i> Buddhism Islam No Information Roman Catholic			Chaldean Judaism Orthodox Shia			Christian Mixed and/or No Designation Other Shinto Hinduism Nestorian Protestant Sunni
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
New Structurally-dissected	1	No Information	Boolean	Unitless	0	An indication that at least 50 percent of the terrain within an area is covered by a large number of vertical structures that are separated by ground-level passageways (for example: walkways, alleys, roads). [Description] A high concentration of vertical structures provides good cover and concealment, limits fields of observation and fire, and slows, diverts, or stops the movement of personnel or vehicles. Vertical structures are man-made features or objects, for example, buildings or non-building structures, such as, water towers, storage tanks, tombs, grave markers or memorial monuments.
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> Aeronautical Other			Maritime Pedestrian			No Information Railway No Transportation System Road

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature Cistern (Point)New ☐ Cistern**A man-made container used for the collection and/or storage of water.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.

<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other Joint Military and Civilian Private Military Public No Information						
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational						
New Feature Code	1	BI010	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i> BI010						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information Other						
Geographic Name Information : Geographic Name Type	2	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original Historical Original No Information Unverified Transliterated Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated						
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						

Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry Perennial			<i>Ephemeral</i>			Intermittent No Information
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
New Pump Present	1	No Information	Boolean	Unitless	0	An indication that a feature supports, contains, or makes use of one or more pumps.
<i>allowed values:</i> False			No Information			True

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i>	noInformation					
	Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i>	No Information					
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i>	No Information		Other			
	Geographic Name Information : Geographic Name Type	2	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i>	Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i>	-999999.0					
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i>	-999999.0					
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<i>allowed values:</i>	Dry Perennial		Ephemeral		Intermittent No Information	
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i>	-999999.0					
	Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.

<i>allowed values:</i> False			No Information			True
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
New Pump Present	1	No Information	Boolean	Unitless	0	An indication that a feature supports, contains, or makes use of one or more pumps.
<i>allowed values:</i> False			No Information			True
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> <div> <div>Brick</div> <div>Metal</div> <div>Reinforced Concrete</div> </div> <div> <div>Concrete</div> <div>No Information</div> <div>Steel</div> </div> <div> <div>Iron</div> <div>Other</div> <div>Stone</div> </div> <div> <div>Masonry</div> <div>Prestressed Concrete</div> </div>						
Volume	1	-999999.0	REAL	cubicMetre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						

Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable			No Information Treatable			Nonpotable Other
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline			Brackish No Information Seawater			Brine Not Applicable Fresh Other
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information			Commercial Livestock Other			Domestic Irrigation Military Power Generation Industrial Municipal Sanitary Domestic

Feature ClearedWay (Area)

New ☐ Cleared Way

A man-made cleared strip through a vegetated region. [Description] May be designed to: provide access for a road, railroad, pipeline, power transmission line, or electrical signal line; demarcate a boundary; obtain survey line-of-sight; or to impede the progress of forest fires (a firebreak).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	EC040	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> EC040						

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<u>allowed values:</u> noInformation							
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Feature ClearedWay (Line)New ☐ Cleared Way

A man-made cleared strip through a vegetated region. [Description] May be designed to: provide access for a road, railroad, pipeline, power transmission line, or electrical signal line; demarcate a boundary; obtain survey line-of-sight; or to impede the progress of forest fires (a firebreak).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	EC040	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> EC040						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.

<i>allowed values:</i> Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original		Native Original Provisional Variant Transliterated	
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<i>allowed values:</i> -999999.0							
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i> No Information							
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i> No Information							
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISClassificationAll	
<i>allowed values:</i> U							
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode	
<i>allowed values:</i> No Information			Other				
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISDissem	
<i>allowed values:</i> noInformation							
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISNonIC	
<i>allowed values:</i> noInformation							
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISOwnerProducer	
<i>allowed values:</i> noInformation							

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

allowed values: noInformation

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

Feature ConservationArea (Area)

New ☐ Conservation Area

An area of land and/or sea especially dedicated to the protection and maintenance of biological diversity, and of natural and associated cultural resources, and managed through legal or other effective means. [Description] As determined, for example, by the International Union for Conservation of Nature and Natural Resources (IUCN).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition

Feature ContaminatedRegion (Area)New ☐ Contaminated Region

A region whose prevailing natural conditions have been degraded through contamination by harmful or objectionable substances. [Description] The contamination may be either naturally occurring or the result of human activity. For example, polluted by sewage or toxic chemicals, obscured by smoke or ash from volcanic eruptions, or contaminated by exposure to Chemical, Biological, Radiological, and/or Nuclear (CBRN) agents.

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Military Environmental Hazard Category	1	No Information	Enumeration	Unitless	0	The category(ies) of environmental hazards present in a region that affect military operations.
	<i>allowed values:</i>			Biological Other	Chemical Thermal	No Information	Nuclear and/or Radiological
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
	<i>allowed values:</i> U						

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature ContaminatedRegion (Point)New ☐ Contaminated Region

A region whose prevailing natural conditions have been degraded through contamination by harmful or objectionable substances. [Description] The contamination may be either naturally occurring or the result of human activity. For example, polluted by sewage or toxic chemicals, obscured by smoke or ash from volcanic eruptions, or contaminated by exposure to Chemical, Biological, Radiological, and/or Nuclear (CBRN) agents.

[Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.

<i>allowed values:</i> Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original		Native Original Provisional Variant Transliterated	
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.	
<i>allowed values:</i> -999999.0							
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.	
<i>allowed values:</i> -999999.0							
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<i>allowed values:</i> -999999.0							
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i> No Information							
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i> No Information							
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.	
<i>allowed values:</i> False							
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.	
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained	Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMCClassificationAll	
<i>allowed values:</i> U							
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode	
<i>allowed values:</i> No Information			Other				

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i> Conical No Information Pyramidal			Domed Other Sawtoothed			Flat Pitched Semi-cylindrical Flat with Clerestory Pitched with Clerestory With Clerestory
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> Aeronautical No Information			Canal Other			Inland Waterway Railway Maritime Road
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Aluminum Iron Other Wood			Brick Masonry Prestressed Concrete			Concrete Metal Reinforced Concrete Glass No Information Steel
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature ControlTower (Point)

New ☐ Control Tower

A structure that houses personnel and equipment used to control the flow of traffic within a specified range of an installation. [Description] Examples of installations that use control towers are aerodromes, railways, and maritime routes.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational

New	Feature Code	1	AQ060	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i>	AQ060					
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
	<i>allowed values:</i>	Air Traffic Control Harbour Control Other Water Transport					
				Air Transport Inland Waters Transport Port Control		Canal Transport Maritime Pilotage Railway Transport	Emergency Operations No Information Signalling
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i>	noInformation					
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i>	No Information					
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i>	No Information					
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i>	Conventional Native Transliterated Unverified Original					
				Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i>	-999999.0					
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i>	-999999.0					
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i>	-999999.0					
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i>	No Information					

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i> Conical No Information Pyramidal			Domed Other Sawtoothed			Flat Pitched Semi-cylindrical Flat with Clerestory Pitched with Clerestory With Clerestory

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> Aeronautical No Information			Canal Other			Inland Waterway Railway Maritime Road
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Aluminum Iron Other Wood			Brick Masonry Prestressed Concrete			Concrete Metal Reinforced Concrete Glass No Information Steel
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Conveyor (Line)

New ☐ Conveyor

A device for conveying articles or materials from one location to another during manufacture or processing using a continuously moving mechanism. [Description] Usually long, thin, and rectangular, and located above ground surface. It can be situated horizontally, vertically, at a slope between flat and upright, or in a combination of these postures. In general, conveyor systems consist of the bucket, screw (auger), apron, or flight conveyors to load silos or bunkers. Other systems use a series of rollers to move a range of products from relatively lightweight luggage and cargo packages at transportation terminals, up to heavyweight plate steel and ingots in industrial mills. The most common system is the belt conveyor. Some systems use a combination of these designs such as shallow buckets (or flat plates) attached to a belt conveyor. Conveyors can be used for long distance transportation (for example, kilometres) of materials. Long distance conveyor systems are usually constructed in segments to accommodate changes in direction where needed.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights. <i>allowed values:</i> <i>False</i> <i>No Information</i> <i>True</i>
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded. <i>allowed values:</i> <i>-999999.0</i>
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature. <i>allowed values:</i> <i>-999999.0</i>
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack). <i>allowed values:</i> <i>noInformation</i>
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography. <i>allowed values:</i> <i>[-999999, -999999]</i>
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public). <i>allowed values:</i> Civilian Other Joint Military and Civilian Private Military Public <i>No Information</i>
New Conveyor Type	3	No Information	Enumeration	Unitless	0	The type(s), or category(ies), of mechanical device that best characterizes the means by which articles or materials are being moved. [Description] The category of conveyor can depend upon the type(s) of materials being moved, the overall distance covered by the conveyor system, and/or whether materials are being moved from one elevation to another, etc. If the system is covered and hidden from view, the category of conveyor may be indiscernible. <i>allowed values:</i> <i>Apron</i> <i>No Information</i> <i>Screw Auger</i> <i>Belt</i> <i>Not visible</i> <i>Bucket</i> <i>Other</i> <i>Flight</i> <i>Rollers</i>
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance. <i>allowed values:</i> <i>noInformation</i>
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures. <i>allowed values:</i> <i>No Information</i> <i>Partially Operational</i> Non-operational Planned Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AF020	CONSTRAINED_STRING	Unitless	5	Feature Code <i>allowed values:</i> <i>AF020</i>
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set. <i>allowed values:</i> <i>noInformation</i>

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).

allowed values: Concrete No Information			Iron Other			Masonry Steel	Metal Wood
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.	
allowed values: noInformation							
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.	

allowed values: -999999.0

Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Concrete No Information			Iron Other			Masonry Steel Metal Wood
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature **CoolingFacility (Area)** New ☐ Cooling Facility

A facility for the removal of thermal energy (for example: by generating and circulating chilled water) for cooling purposes.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.

<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private		Military Public No Information	
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned		Not in Operation Temporarily Non-operational Operational	
New Feature Code	1	AD055	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AD055						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Commerce Other			Government Residence		Manufacturing No Information	
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.

Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact						
Damaged						
Destroyed						
Dismantled						
Unmaintained						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/c/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/c/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumlSMOwnerProducer
---	---	---------------	----------------	----------	-----	---

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	---

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

allowed values: *noInformation*allowed values: *pimGUID*

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature CoolingTower (Area)New ☐ Cooling Tower

A tall tower for cooling hot water from an industrial process before reuse.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> <i>False</i>			<i>No Information</i>			<i>True</i>
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> <i>-999999.0</i>						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> <i>-999999.0</i>						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> <i>noInformation</i>						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> <i>[-999999, -999999]</i>						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> <i>noInformation</i>						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AF030	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> <i>AF030</i>						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> <i>noInformation</i>						

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

						Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained
						Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

[Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Aluminum Masonry Steel Brick Metal Stone Concrete No Information Iron Other						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Courtyard (Area)

New ☐ Courtyard

An open area that is open to the sky and surrounded by walls or buildings forming the precincts of a larger facility (for example: an extended house, a castle, or a homestead), often in the form of an area that is enclosed by a single building. [Description] Historically, these areas in inns and public buildings were often the primary meeting places for some purposes, leading to the other meanings of the term 'court'.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						

New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
New	Feature Code	1	AL175	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AL175						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						

Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Lifting Capacity	1	-999999.0	REAL	tonne	0	The maximum weight that can be safely raised by a lifting device (for example: a crane).
<i>allowed values:</i> -999999.0						
Location Referenced to Shoreline	1	No Information	Enumeration	Unitless	0	The location of an object in relation to a land water boundary.
<i>allowed values:</i> At Shoreline Inland No Information Offshore						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False No Information True						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact Damaged No Information Destroyed Unmaintained Dismantled						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> Maritime Railway		No Information Road		No Transportation System		Other
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Aluminum Other		Iron Steel		Metal		No Information
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0

Feature Crane (Point)New ☐ Crane

Equipment for lifting, shifting, and lowering objects or materials by means of a swinging boom or with the lifting apparatus supported on an overhead track.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Crane Mobility Type	1	No Information	Enumeration	Unitless	0	The type of mobility of a crane.
<i>allowed values:</i> Fixed Other			Floating Travelling			Mobile No Information
Crane Type	1	No Information	Enumeration	Unitless	0	The type of a crane based on its design and/or method of operation.
<i>allowed values:</i> Bridge Crane Rotating Crane			Container Crane Tower Crane			No Information Other
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AF040	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AF040						

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<u>allowed values:</u> noInformation							
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> No Information

Variant Transliterated							
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999.0

Feature Crater (Area)New ☐ Crater

A bowl-shaped depression in the terrain, usually round and with steep sides. [Description] Craters commonly are created by the removal of material by explosions, either natural (for example: the eruption of a volcano) or artificial (for example: a bomb), originating at or below the Earth's surface, or by the impact of an object with the Earth (for example: a meteorite).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition

	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencl . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False			No Information		True	

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature Crater (Point)

New ☐ Crater

A bowl-shaped depression in the terrain, usually round and with steep sides. [Description] Craters commonly are created by the removal of material by explosions, either natural (for example: the eruption of a volcano) or artificial (for example: a bomb), originating at or below the Earth's surface, or by the impact of an object with the Earth (for example: a meteorite).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition

Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Predominant Feature Depth	1	-999999.0	REAL	metre	0	The predominant depth (the depth of at least 50 percent) of the feature.
<i>allowed values:</i> -999999.0						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMOwnerProducer
<i>allowed values:</i> noInformation						
New Snow or Ice Depth	1	[-999999.0, -999999.0]	REAL_Interval	Metre	0	The depth of the snow or ice. [Description] The snow or ice layer ranges from the top of the snow or ice surface to the underlying terrain.
<i>allowed values:</i> [-999999.0, -999999.0]						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

[Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Predominant Feature Depth	1	-999999.0	REAL	metre	0	The predominant depth (the depth of at least 50 percent) of the feature.
<i>allowed values:</i> -999999.0						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMDissem

allowed values: *noInformation*

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
--	---	---------------	----------------	----------	-----	---

allowed values: *noInformation*

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	---

allowed values: *noInformation*

Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
--------------------------	---	----------------	-------------	----------	---	---

allowed values: *No Information**Other**Rock**Soil*

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
--------------------------	---	---------------	----------------	----------	-----	--

allowed values: *noInformation*allowed values: *pimGUID*

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Crevice (Line)New ☐ Crevice

A narrow opening or fissure produced by a crack in the land, especially in rock. [Description] May also describe a deep vertical opening in the terrain that appears after an earthquake.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	DB061	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> DB061						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). Feature Crib (Area)New ☐ Crib

A permanent structure set in the water, typically framed with wooden beams and filled with rocks or boulders that is used to anchor log booms or support other constructions (for example: submerged outfalls, diffusers, or piers). [Description] They may always be dry, submerged, or covered and uncovered. Cribbs should not be confused with water intake towers which may sometimes also be termed a 'crib'.

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature Crib (Point)

New ☐ Crib

A permanent structure set in the water, typically framed with wooden beams and filled with rocks or boulders that is used to anchor log booms or support other constructions (for example: submerged outfalls, diffusers, or piers). [Description] They may always be dry, submerged, or covered and uncovered. Cribbs should not be confused with water intake towers which may sometimes also be termed a 'crib'.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
-----------	-------------	---------	-----------	-------	--------	----------------------

	Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
	<i>allowed values:</i> noInformation						
	Hydrographic Base Height : Sounding Metadata : Bathymetric Measurement Technique	3	No Information	Enumeration	Unitless	0	The technique used to determine water depth(s).
	<i>allowed values:</i> Area Swept by Wire-drag			Depth Known by Other Than Wire Drag			No Information Other
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	BD020	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BD020						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.

	Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). <i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMNonIC
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMOwnerProducer
<i>allowed values:</i>	noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat)' (CSP:Okra) (FMM:Organic Techniques) could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i>	noInformation					
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

							Historical Transliterated Other Variant Original
							Native Original Provisional Variant Transliterated
	Crop Information : Irrigation Method	1	No Information	Enumeration	Unitless	0	The method used to supply crops with water.
	<i>allowed values:</i> Center Pivot Linear Move Subirrigation						Drip No Information Terrace
							Furrow Other
							Lateral Move Overhead
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vegetation Trafficability Impact	1	-999999.0	Real	Percent	0	The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
<i>allowed values:</i> -999999.0						

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Crossing (Point) New ☐ Crossing

A location where land transportation routes intersect or cross at the same vertical level. [Description] For example, a railway crossing, a road intersection, and a ford.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	AQ062	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AQ062						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Intersection Control Type	3	No Information	Enumeration	Unitless	0	The type of route intersection traffic control based on the method(s) of warning and/or control.
<i>allowed values:</i> Ground Marking Priority Sign			No Control Signal Device			No Information Stop Sign Other Yield Sign
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC

Feature CulturalContextLocation (Point)

New ☐ Cultural Context Location

A location that normally does not appear as a specific, characterized object but that represents an area where a specific cultural factor (for example: religion, ethnicity, language, or tribal/clan affiliation) predominates.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Cultural Context Type	1	No Information	Enumeration	Unitless	0	The type of a cultural factor shared by a group of people and establishing a common context for their behaviour.
<i>allowed values:</i> Clan No Information			Ethnic Group Other			Language Religion National Identity Tribe
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	ZD030	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> ZD030						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

allowed values: -999999.0

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
-------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
---	---	----------------	--------	----------	----	--

allowed values: No Information

Religious Information : Religious Designation	1	No Information	Enumeration	Unitless	0	A designation denoting a religion or system of belief.
---	---	----------------	-------------	----------	---	--

allowed values:

Buddhism	Chaldean	Christian	Hinduism
Islam	Judaism	Nestorian	No Information
Orthodox	Other	Protestant	Roman Catholic
Shia	Shinto	Sunni	

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
---	---	---	----------	----------	----	--

allowed values: U

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
---	---	----------------	----------	----------	----	---

allowed values: No Information

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
---	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
--	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
---	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	--

allowed values: noInformation

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

Culvert Type	1	No Information	Enumeration	Unitless	0	The type of a culvert based on its shape and fill.
<u>allowed values:</u> Box with Load Regular with Soil			Box with Soil			No Information Other
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<u>allowed values:</u> <i>noInformation</i>						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<u>allowed values:</u> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AQ065	CONSTRAINED_STRING	Unitless	5	Feature Code

<i>allowed values:</i> AQ065						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information Other						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact Damaged No Information Destroyed Unmaintained Dismantled						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Concrete Other			Masonry			Metal No Information
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Cut (Line)

New ☐ Cut

An excavation in the terrain to provide passage for a land or water transportation route (for example: a road, a railway, and/or a canal).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	DB070	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> DB070						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (":"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Grading Type	1	No Information	Enumeration	Unitless	0	The number of terrain feature sides on which either fill or cut material is exposed. [Description] For example, along two sides of a road that is both cut into the side of a hill and supported by fill on the downslope.
<i>allowed values:</i> Many Sides Other			No Information Two Sides			No Sides One Side

Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Surface Slope	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.
<i>allowed values:</i> [-999999.0, -999999.0]						
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> Aqueduct Pedestrian						
			Canal Railway			
					No Information Road	Other
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

<i>allowed values:</i> DB071						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.

allowed values: No Information

Predominant Feature Height	1	-999999.0	REAL	metre	0	The predominant height (the height of at least 50 percent) of the feature measured from the lowest point of the base at ground or water level (downhill side/downstream side).
----------------------------	---	-----------	------	-------	---	--

allowed values: -999999.0

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
---	---	---	----------	----------	----	--

allowed values: U

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
---	---	----------------	----------	----------	----	---

allowed values: No Information

Other

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMDissem
---	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMNonIC
--	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMOwnerProducer
---	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	---

allowed values: noInformation

Surface Slope	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.
---------------	---	------------------------	---------------	---------	---	--

allowed values: [-999999.0, -999999.0]

Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.

allowed values: Aqueduct Pedestrian			Canal Railway			No Information Road	Other
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
allowed values: False			No Information			True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
allowed values: -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
allowed values: -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
allowed values: noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
allowed values: [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
allowed values: Civilian Other			Joint Military and Civilian Private			Military Public No Information
New Dam Crest Length	1	-999999.0	Real	Metres	0	The centreline distance measured along the crest of a dam, and in the horizontal plane.
allowed values: -999999.0						
Dam Crest Width	1	-999999.0	Real	Metre	0	The average distance across the crest of a dam. [Description] The width is measured perpendicular to the crest centerline.
allowed values: -999999.0						

	Dam Face Type	1	No Information	Enumeration	Unitless	0	The type of slope of the upstream face of a dam.
	<i>allowed values:</i> No Information			Slope			Vertical
New	Dam Structural Design Type	1	No Information	Enumeration	Unitless	0	The type of structural design of a dam.
	<i>allowed values:</i> Arch Gravity Rockfill			Asphalt-concrete core Multi-Arch			Buttress No Information Earthen Other
	Dam Type	1	No Information	Enumeration	Unitless	0	The type of a dam based on function and/or structure. [Description] May be used as a means of subtyping Feature: 'Dam'.
	<i>allowed values:</i> Flood Control Other			Hydroelectric Power Generation Weir			Navigation No Information
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	BI020	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BI020						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	3	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Dismantled Unmaintained
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Spillway Height	1	-999999.0	Real	Metre	0	The vertical distance above ground or water level on the upstream side of the dam.
<i>allowed values:</i> -999999.0						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Brick No Information Steel			Concrete Other Stone			Masonry Rubble Treated Timber Metal Soil Wood
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> No Information Railway			No Transportation System Road			Other Pedestrian
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
New Water Resource Information : Water Pump Accessibility	1	No Information	Enumeration	Unitless	0	The approachable or easily entered side of a water source where portable equipment including pumps and pipes may be placed into the water source and used with nearby portable equipment. [Description] Provides an indication of whether it is possible access the water for the purpose of connecting portable water pumping equipment to temporary purification units. Accessibility must meet distance requirements in the transport of water: 100 m horizontal and 10 m vertical.
<i>allowed values:</i> From All Sides From Right No Information			From East From South			From Left From West From North No Accessibility

Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public). <i>allowed values:</i> Civilian Other Joint Military and Civilian Private Military Public <i>No Information</i>
New Dam Crest Length	1	-999999.0	Real	Metres	0	The centreline distance measured along the crest of a dam, and in the horizontal plane. <i>allowed values:</i> <i>-999999.0</i>
Dam Crest Width	1	-999999.0	Real	Metre	0	The average distance across the crest of a dam. [Description] The width is measured perpendicular to the crest centerline. <i>allowed values:</i> <i>-999999.0</i>
Dam Face Type	1	No Information	Enumeration	Unitless	0	The type of slope of the upstream face of a dam. <i>allowed values:</i> <i>No Information</i> Slope Vertical
New Dam Structural Design Type	1	No Information	Enumeration	Unitless	0	The type of structural design of a dam. <i>allowed values:</i> Arch Gravity Rockfill Asphalt-concrete core Multi-Arch Buttress No Information Earthen Other
Dam Type	1	No Information	Enumeration	Unitless	0	The type of a dam based on function and/or structure. [Description] May be used as a means of subtyping Feature: 'Dam'. <i>allowed values:</i> Flood Control Other Hydroelectric Power Generation Weir Navigation <i>No Information</i>
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance. <i>allowed values:</i> <i>noInformation</i>
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures. <i>allowed values:</i> <i>No Information</i> Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BI020	CONSTRAINED_STRING	Unitless	5	Feature Code <i>allowed values:</i> <i>BI020</i>
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.

<u>allowed values:</u> <i>noInformation</i>						
Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> No Information						
Geographic Name Information : Geographic Name Type	3	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<u>allowed values:</u> <div> Conventional Native Transliterated Unverified Original </div> <div> Historical Original No Information Unverified Transliterated </div> <div> Historical Transliterated Other Variant Original </div> <div> Native Original Provisional Variant Transliterated </div>						
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> <i>-999999.0</i>						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> <i>-999999.0</i>						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> <i>False</i>						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<u>allowed values:</u> <div> Construction Intact </div> <div> Damaged No Information </div> <div> Destroyed Unmaintained </div> <div> Dismantled </div>						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<u>allowed values:</u> <i>U</i>						

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Spillway Height	1	-999999.0	Real	Metre	0	The vertical distance above ground or water level on the upstream side of the dam.
<i>allowed values:</i> -999999.0						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Brick No Information Steel			Concrete Other Stone			Masonry Rubble Treated Timber Metal Soil Wood
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> No Information Railway			No Transportation System Road			Other Pedestrian
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID						

Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
New Water Resource Information : Water Pump Accessibility	1	No Information	Enumeration	Unitless	0	The approachable or easily entered side of a water source where portable equipment including pumps and pipes may be placed into the water source and used with nearby portable equipment. [Description] Provides an indication of whether it is possible access the water for the purpose of connecting portable water pumping equipment to temporary purification units. Accessibility must meet distance requirements in the transport of water: 100 m horizontal and 10 m vertical.
<i>allowed values:</i> From All Sides From Right No Information From East From South From Left From West From North No Accessibility

Feature Dam (Point)

New ☐ Dam

A barrier constructed to hold back water and raise its level to form a reservoir or to prevent flooding.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False No Information True						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Joint Military and Civilian Military No Information Other Private Public						
New Dam Crest Length	1	-999999.0	Real	Metres	0	The centreline distance measured along the crest of a dam, and in the horizontal plane.
<i>allowed values:</i> -999999.0						
Dam Crest Width	1	-999999.0	Real	Metre	0	The average distance across the crest of a dam. [Description] The width is measured perpendicular to the crest centerline.
<i>allowed values:</i> -999999.0						
Dam Face Type	1	No Information	Enumeration	Unitless	0	The type of slope of the upstream face of a dam.
<i>allowed values:</i> No Information Slope Vertical						

New	Dam Structural Design Type	1	No Information	Enumeration	Unitless	0	The type of structural design of a dam.
<i>allowed values:</i> Arch Asphalt-concrete core Buttress Earthen Gravity Multi-Arch No Information Other Rockfill							
	Dam Type	1	No Information	Enumeration	Unitless	0	The type of a dam based on function and/or structure. [Description] May be used as a means of subtyping Feature: 'Dam'.
<i>allowed values:</i> Flood Control Hydroelectric Power Generation Navigation No Information Other Weir							
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation							
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Non-operational Not in Operation Operational Partially Operational Planned Temporarily Non-operational							
New	Feature Code	1	BI020	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BI020							
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation							
	Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information Other							
	Geographic Name Information : Geographic Name Type	3	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Historical Original Historical Transliterated Native Original Native Transliterated No Information Other Provisional Unverified Original Unverified Transliterated Variant Original Variant Transliterated							
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.

allowed values: No Information

Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
---	---	----------------	--------	----------	----	--

allowed values: noInformation

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	---

<i>allowed values:</i> <i>noInformation</i>						
Spillway Height	1	-999999.0	Real	Metre	0	The vertical distance above ground or water level on the upstream side of the dam.
<i>allowed values:</i> <i>-999999.0</i>						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Brick No Information Steel			Concrete Other Stone			Masonry Rubble Treated Timber Metal Soil Wood
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> No Information Railway			No Transportation System Road			Other Pedestrian
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> <i>noInformation</i>						
<i>allowed values:</i> <i>pimGUID</i>						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> <i>noInformation</i>						
New Water Resource Information : Water Pump Accessibility	1	No Information	Enumeration	Unitless	0	The approachable or easily entered side of a water source where portable equipment including pumps and pipes may be placed into the water source and used with nearby portable equipment. [Description] Provides an indication of whether it is possible access the water for the purpose of connecting portable water pumping equipment to temporary purification units. Accessibility must meet distance requirements in the transport of water: 100 m horizontal and 10 m vertical.
<i>allowed values:</i> From All Sides From Right No Information			From East From South			From Left From West From North No Accessibility

Feature Dataset (Area)

New ☐ Dataset

A resource that is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process). [Description] For example, a set of modeling entities whose instances together constitute a 'water resources map'.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Absolute Horizontal Accuracy (90%)	1	-999999.0	REAL	metre	0	Either the difference between the recorded horizontal coordinate value(s) of a feature and its true position referenced to the same geodetic datum expressed as a linear error at 90 percent probability for a single coordinate value, or a circular error at 90 percent probability for a pair of coordinate values, or the reason that the value is absent. [Description] The domain of values is a real number. For example, 10.0 (as in the accuracy in metres).

allowed values: *-999999.0*

Absolute Vertical Accuracy (90%)	1	-999999.0	REAL	metre	0	The difference between the recorded elevation of a feature and its true elevation referenced to the same vertical datum expressed as a linear error at 90 percent probability.
<i>allowed values:</i> -999999.0						
Cell Identifier	1	No Information	String	Unitless	20	The identifier that denotes a defined extent (for example: a rectangular cell) within a system (for example: an array of rectangular cells) of planar space partitioning. [Description] The partitioning results in a set of unique, continuous, non-overlapping, regions; for example: a grid, a hexagonal tiling, a Voronoi tessellation, a Delaunay triangulation, a Triangulated Irregular Network (TIN). The specific mechanism used to create the tessellation and assign identifiers to its cells is externally defined.
<i>allowed values:</i> No Information						
Cell Partition Scheme	1	No Information	CodeList	Unitless	30	The tessellation scheme used to create a planar space partitioning and assign identifiers to its cells. [Description] The partitioning results in a set of unique, continuous, non-overlapping, regions; for example: a grid, a hexagonal tiling, a Voronoi tessellation, a Delaunay triangulation, a Triangulated Irregular Network (TIN). [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/CellPartitionSchemeCode
<i>allowed values:</i> No Information			Other			
Data Quality Statement	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records a general assessment of the quality of a resource (for example: a data instance, a data set or a data processing activity). [Description] The quality of a data resource is dependent on the data providers knowledge regarding the lineage of the data and the processes that have been used to transform that data. No restriction is placed on the length of the statement.
<i>allowed values:</i> No Information						
Elevation Vertical Accuracy (90%)	1	-999999.0	REAL	metre	0	Either the difference between a recorded elevation value and the true elevation referenced to the same vertical datum, expressed as a linear error at 90 percent probability, or the reason that the value is absent. [Description] The domain of values is a real number. For example, 10.0 (as in the accuracy in metres).
<i>allowed values:</i> -999999.0						
Equivalent Scale Category	1	No Information	CodeList	Unitless	30	The map scale that best represents the density of feature collection within the geospatial extent of a specified region, as a category. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/EquivalentScaleCategoryCode
<i>allowed values:</i> No Information			Other			
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Extraction Specification	1	No Information	CodeList	Unitless	30	The specification that was used as the basis for defining the digital representation of the feature or data set. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ExtractionSpecificationCode
<i>allowed values:</i> No Information			Other			
Extraction Specification Version	1	No Information	String	Unitless	24	The version of the specification that was used as the basis for defining the digital representation of the feature or data set.
<i>allowed values:</i> No Information						
New Feature Code	1	ZI031	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> ZI031						
New (Location Country) Designation : GENC Short URN-based Identifier	4	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geodetic Datum	1	No Information	CodeList	Unitless	30	A datum describing the relationship of a two-dimensional coordinate system to the Earth. [Description] The datum (sometimes termed 'horizontal datum') defines a surface and two locally-orthogonal axes on that surface as the basis for specifying geodetic longitude and geodetic latitude. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/GeodeticDatumCode
<i>allowed values:</i> No Information			Other			

Height Vertical Accuracy (90%)	1	-999999.0	REAL	metre	0	Either the difference between a recorded height value and the true height referenced to the same ground level, expressed as a linear error at 90 percent probability, or the reason that the value is absent. [Description] The domain of values is a real number. For example, 10.0 (as in the accuracy in metres).
<i>allowed values:</i> -999999.0						
Maintenance Date and Time	1	noInformation	StructuredText	Unitless	20	The date and, optionally, time that maintenance, based on a given Extraction Specification, was completed for the features falling within the geospatial extent of a specified region. [Description] Midnight is understood to be 00:00:00 (the beginning of a day); when the time is not specified then midnight in the local time zone is typically implied. [DatatypeSpecification] A structured text value specifying a date-time. [EncodingSpecification] Formatted in accordance with ISO 8601:2000, 5.4.1, Combinations of date and time of day - Complete representation - Extended format, a calendar date and time representation, as a single data element comprising up to twenty characters, where [YYYY] represents a calendar year, [MM] the ordinal number of a calendar month within the calendar year, [DD] the ordinal number of a day within the calendar month, [hh] the ordinal number of an hour within the calendar day, [mm] the ordinal number of a minute within the hour, [ss] the ordinal number of a second within the minute, and an optional 'Z' when the time is according to Coordinated Universal Time (UTC), as 'YYYY-MM-DDThh:mm:ssZ' (for example: '1985-04-12T11:45:20Z' for 11 hours, 45 minutes and 20 seconds UTC on 12 April 1985). Representations with reduced precision may be used in accordance with 5.4.2 (for example: '1985-04-12' for 12 April 1985). Representations consistently using basic format (eliminating the hyphen '-' and the colon ':') may be used in accordance with 5.4.1 (for example: '19850412T114520Z').
<i>allowed values:</i> noInformation						
Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMOwnerProducer
<i>allowed values:</i> noInformation						
New Schema Version	1	noInformation	StructuredText	Unitless	254	Identifies the version of the schema used at the time of data collection.
<i>allowed values:</i> noInformation						

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Restriction Information : Unique Entity Identifier	1	pimGUID	StructuredText	Unitless	254	An identifier of the restriction(s) and/or security control(s) applicable to dissemination of data regarding the digital representation of the entity. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> pimGUID						
Unique Resource Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a resource that is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process). [Description] The identifier may be specified by a Uniform Resource Identifier (URI) in accordance with the Internet Engineering Task Force (IETF) RFC2396. [DatatypeSpecification] A structured text value specifying a unique resource (for example: dataset or service) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 (URI Generic Syntax); the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
Vertical Datum	1	No Information	CodeList	Unitless	30	A reference surface with respect to which elevations and/or depths are specified. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/VerticalDatumCode
<i>allowed values:</i> No Information			Other

Feature Dataset (Table)

New ☐ Dataset

A resource that is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process).

[Description] For example, a set of modeling entities whose instances together constitute a 'water resources map'.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Absolute Horizontal Accuracy (90%)	1	-999999.0	REAL	metre	0	Either the difference between the recorded horizontal coordinate value(s) of a feature and its true position referenced to the same geodetic datum expressed as a linear error at 90 percent probability for a single coordinate value, or a circular error at 90 percent probability for a pair of coordinate values, or the reason that the value is absent. [Description] The domain of values is a real number. For example, 10.0 (as in the accuracy in metres).
<i>allowed values:</i> -999999.0						
Absolute Vertical Accuracy (90%)	1	-999999.0	REAL	metre	0	The difference between the recorded elevation of a feature and its true elevation referenced to the same vertical datum expressed as a linear error at 90 percent probability.
<i>allowed values:</i> -999999.0						
Cell Identifier	1	No Information	String	Unitless	20	The identifier that denotes a defined extent (for example: a rectangular cell) within a system (for example: an array of rectangular cells) of planar space partitioning. [Description] The partitioning results in a set of unique, continuous, non-overlapping, regions; for example: a grid, a hexagonal tiling, a Voronoi tessellation, a Delaunay triangulation, a Triangulated Irregular Network (TIN). The specific mechanism used to create the tessellation and assign identifiers to its cells is externally defined.
<i>allowed values:</i> No Information						
Cell Partition Scheme	1	No Information	CodeList	Unitless	30	The tessellation scheme used to create a planar space partitioning and assign identifiers to its cells. [Description] The partitioning results in a set of unique, continuous, non-overlapping, regions; for example: a grid, a hexagonal tiling, a Voronoi tessellation, a Delaunay triangulation, a Triangulated Irregular Network (TIN). [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/CellPartitionSchemeCode
<i>allowed values:</i> No Information			Other			

Data Quality Statement	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records a general assessment of the quality of a resource (for example: a data instance, a data set or a data processing activity). [Description] The quality of a data resource is dependent on the data providers knowledge regarding the lineage of the data and the processes that have been used to transform that data. No restriction is placed on the length of the statement.
<i>allowed values:</i> No Information						
Elevation Vertical Accuracy (90%)	1	-999999.0	REAL	metre	0	Either the difference between a recorded elevation value and the true elevation referenced to the same vertical datum, expressed as a linear error at 90 percent probability, or the reason that the value is absent. [Description] The domain of values is a real number. For example, 10.0 (as in the accuracy in metres).
<i>allowed values:</i> -999999.0						
Equivalent Scale Category	1	No Information	CodeList	Unitless	30	The map scale that best represents the density of feature collection within the geospatial extent of a specified region, as a category. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/EquivalentScaleCategoryCode
<i>allowed values:</i> No Information			Other			
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Extraction Specification	1	No Information	CodeList	Unitless	30	The specification that was used as the basis for defining the digital representation of the feature or data set. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ExtractionSpecificationCode
<i>allowed values:</i> No Information			Other			
Extraction Specification Version	1	No Information	String	Unitless	24	The version of the specification that was used as the basis for defining the digital representation of the feature or data set.
<i>allowed values:</i> No Information						
New Feature Code	1	ZI031	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> ZI031						
New (Location Country) Designation : GENC Short URN-based Identifier	4	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geodetic Datum	1	No Information	CodeList	Unitless	30	A datum describing the relationship of a two-dimensional coordinate system to the Earth. [Description] The datum (sometimes termed 'horizontal datum') defines a surface and two locally-orthogonal axes on that surface as the basis for specifying geodetic longitude and geodetic latitude. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/GeodeticDatumCode
<i>allowed values:</i> No Information			Other			
Height Vertical Accuracy (90%)	1	-999999.0	REAL	metre	0	Either the difference between a recorded height value and the true height referenced to the same ground level, expressed as a linear error at 90 percent probability, or the reason that the value is absent. [Description] The domain of values is a real number. For example, 10.0 (as in the accuracy in metres).
<i>allowed values:</i> -999999.0						
Maintenance Date and Time	1	noInformation	StructuredText	Unitless	20	The date and, optionally, time that maintenance, based on a given Extraction Specification, was completed for the features falling within the geospatial extent of a specified region. [Description] Midnight is understood to be 00:00:00 (the beginning of a day); when the time is not specified then midnight in the local time zone is typically implied. [DatatypeSpecification] A structured text value specifying a date-time. [EncodingSpecification] Formatted in accordance with ISO 8601:2000, 5.4.1, Combinations of date and time of day - Complete representation - Extended format, a calendar date and time representation, as a single data element comprising up to twenty characters, where [YYYY] represents a calendar year, [MM] the ordinal number of a calendar month within the calendar year, [DD] the ordinal number of a day within the calendar month, [hh] the ordinal number of an hour within the calendar day, [mm] the ordinal number of a minute within the hour, [ss] the ordinal number of a second within the minute, and an optional 'Z' when the time is according to Coordinated Universal Time (UTC), as 'YYYY-MM-DDThh:mm:ssZ' (for example: '1985-04-12T11:45:20Z' for 11 hours, 45 minutes and 20 seconds UTC on 12 April 1985). Representations with reduced precision may be used in accordance with 5.4.2 (for example: '1985-04-12' for 12 April 1985). Representations consistently using basic format (eliminating the hyphen '-' and the colon ':') may be used in accordance with 5.4.1 (for example: '19850412T114520Z').

<i>allowed values:</i> <i>noInformation</i>						
Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> <i>No Information</i>						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> <i>U</i>						
Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> <i>No Information</i> <i>Other</i>						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> <i>noInformation</i>						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> <i>noInformation</i>						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> <i>noInformation</i>						
New Schema Version	1	noInformation	StructuredText	Unitless	254	Identifies the version of the schema used at the time of data collection.
<i>allowed values:</i> <i>noInformation</i>						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> <i>noInformation</i>						

Restriction Information : Unique Entity Identifier	1	pimGUID	StructuredText	Unitless	254	An identifier of the restriction(s) and/or security control(s) applicable to dissemination of data regarding the digital representation of the entity. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> pimGUID						
Unique Resource Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a resource that is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process). [Description] The identifier may be specified by a Uniform Resource Identifier (URI) in accordance with the Internet Engineering Task Force (IETF) RFC2396. [DatatypeSpecification] A structured text value specifying a unique resource (for example: dataset or service) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 (URI Generic Syntax); the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
Vertical Datum	1	No Information	CodeList	Unitless	30	A reference surface with respect to which elevations and/or depths are specified. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/VerticalDatumCode
<i>allowed values:</i> No Information			Other

Feature DefensiveRevetment (Line)

New ☐ Defensive Revetment

A raised construction that protects a military asset (for example: aircraft or fighting vehicle), equipment (for example: radar station), and/or facility (for example: surface-to-air missile site) from hostile action. [Description] Defensive revetments may be constructed of sandbags, concrete, compacted earth, or other material such as logs or metal. They offer protection against low flying splinters, shrapnel, and/or projectiles from bombs, rockets, grenades, small arms fire and other line-of-sight weapons. High-angle, low-velocity fragments will still impact the exposed site.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	GB050	CONSTRAINED_STRING	Unitless	5	Feature Code

<i>allowed values:</i> GB050							
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation							
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information							
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> <div>Conventional</div> <div>Native Transliterated</div> <div>Unverified Original</div> <div>Historical Original</div> <div>No Information</div> <div>Unverified Transliterated</div> <div>Historical Transliterated</div> <div>Other</div> <div>Variant Original</div> <div>Native Original</div> <div>Provisional</div> <div>Variant Transliterated</div>							
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information							
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information							
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> <div>Construction</div> <div>Intact</div> <div>Damaged</div> <div>No Information</div> <div>Destroyed</div> <div>Unmaintained</div> <div>Dismantled</div>							

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Asphalt Masonry Reinforced Concrete Wood			Boulders Metal Rubble			Brick Concrete No Information Other Sand Soil

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Usable Length	1	-999999.0	REAL	metre	0	The interior length of a structure (for example: an aircraft bunker or a lock). [Description] The length is taken along the primary alignment of the structure. If the structure is irregular in shape the length is along its greatest horizontal dimension, else if the structure is regular in shape then a shape-specific rule may apply: for a rectangular structure, the length of the longer axis; for a round structure, the diameter.
<i>allowed values:</i> -999999.0						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

<i>allowed values:</i> [-999999, -999999]						
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.

[Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Surface Slope	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.
<i>allowed values:</i> [-999999.0, -999999.0]						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

<i>allowed values:</i> pimGUID						

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Depression (Point) New ☐ Depression

A sunken place in the terrain that is completely surrounded by higher terrain.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.

<i>allowed values:</i> DB080						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature DepthContour (Line)

New ☐ Depth Contour

A line connecting points of equal depth at and below the hydrographic datum. [Description] Depth contours follow the rules for contour formation, that is, contours must close on themselves, must be continuous, and must precisely represent the shape of the bottom. Depth contours are usually based on detailed bathymetric information.

<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

Feature DepthCurve (Line)

New ☐ Depth Curve

A navigational safety line indicating that no sounding of a lesser depth exists seaward of the line, but greater depths may occur on the shallow side of the line. [Description] Depth curves should not be confused with a depth contour. Depth curves are generalised, are biased towards safety of navigation, and do not fully follow the rules for contour formation, that is, contours must close on themselves, must be continuous, and must precisely represent the shape of the bottom.

<i>allowed values:</i> Conventional Native Transliterated Unverified Original				Historical Original No Information Unverified Transliterated	Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated	
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0

[Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMClassificationAll
<i>allowed values:</i> U							

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Terrain Surface Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the surface layer of the terrain.
<i>allowed values:</i> Bedrock Gravel No Information Soil			Boulders Lava Flow Other			Evaporite Loess Rock Frozen Water Mud Sand
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

New Feature Code	1	BD030	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BD030						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

allowed values: *noInformation*

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
--------------------------	---	---------------	----------------	----------	-----	--

allowed values: *noInformation*allowed values: *pimGUID*

Width	1	-999999.0	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature DishAerial (Point)New ☐ Dish Aerial

A concave-shaped aerial that is used for emitting and/or sensing electromagnetic energy. [Description] For example, used to transmit and/or receive electronic signals as at a satellite station or to capture electromagnetic energy as in radio astronomy.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AT010	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AT010						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Height of Object	1	-999999.0	REAL	metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information			True
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<u>allowed values:</u> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. <i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Fibreglass			Metal			
<i>allowed values:</i> No Information			Other			
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation

<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMNonIC
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMOwnerProducer
<i>allowed values:</i>	noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat)' (CSP:Okra) (FMM:Organic Techniques) could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i>	noInformation					
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

allowed values: noInformation*allowed values:* pimGUID

Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999.0	Real	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
By-product	3	No Information	Enumeration	Unitless	0	The principal by-product(s) of a production, mining, or agricultural activity. [Description] If multiple by-products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> No Information Sludge			Other Spoil			Refuse Slag
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.

<i>allowed values:</i> No Information		Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational		Operational	
New	Feature Code	1	AB000	CONSTRAINED_ STRING	Unitless	5	Feature Code		
<i>allowed values:</i> AB000									
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.		
<i>allowed values:</i> noInformation									
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.		
<i>allowed values:</i> No Information									
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2		
<i>allowed values:</i> No Information									
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.

	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.		
<i>allowed values:</i> -999999.0									
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.		
<i>allowed values:</i> -999999.0									
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.		
<i>allowed values:</i> -999999.0									
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.		
<i>allowed values:</i> No Information									
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.		
<i>allowed values:</i> No Information									

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other

<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> Inland Waterway Railway			No Information Road			Other Pedestrian
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature Ditch (Area)New ☐ Ditch

An artificial waterway with no flow, or a controlled flow, usually unlined, used for draining or irrigating land.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Inland Waterbody Bank : Above Water Bank Slope (first bank)	1	-999999.0	REAL	percent	0	The amount of upward inclination between the horizontal surface of the mean water level of a watercourse where it touches the bank and the top of the first usable break in slope, measured at the same point on the upper bank as the military gap width. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
<i>allowed values:</i> -999999.0 <i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Average Water Depth	1	[-999999.0, -999999.0]	Real_Interval	Metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999.0, -999999.0]						
Inland Waterbody Bank : Bank Orientation (first bank)	1	No Information	Enumeration	Unitless	0	The relative orientation of a bank of an inland waterbody based on the direction of predominant water flow in the adjacent waterbody.
<i>allowed values:</i> Indeterminate Other			Left Right		No Flow	No Information
<i>allowed values:</i> Indeterminate Other			Left Right		No Flow	No Information
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Bottom Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing the bottom of a body of water.
<i>allowed values:</i> Bedrock Gravel and Cobble Paved Sand Soil			Clay and Silt Masonry Peat Sand and Gravel		Concrete No Information Reinforced Concrete Sand over Mud	Coral Other Rocks and Boulders Silty Sands
<i>allowed values:</i> Bedrock Gravel and Cobble Paved Sand Slash			Clay and Silt Masonry Peat Sand and Gravel Soil		Concrete No Information Reinforced Concrete Sand over Mud	Coral Other Rocks and Boulders Silty Sands

	allowed values:	Bedrock Gravel and Cobble Paved Sand Slash	Clay and Silt Masonry Peat Sand and Gravel Soil	Concrete No Information Reinforced Concrete Sand over Mud	Coral Other Rocks and Boulders Silty Sands		
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	allowed values:	[-999999, -999999]					
	Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	allowed values:	-999999.0					
	Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	allowed values:	-999999.0					
	Contained within Tunnel	1	No Information	Boolean	Unitless	0	The object is at least partially located within, or passes through, a tunnel. [Description] For example, a canal passing through a tunnel.
	allowed values:	False		No Information		True	
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	allowed values:	No Information		Other		Private Public	
	Covered Drain	1	No Information	Boolean	Unitless	0	An indication that a watercourse section is completely covered over and connects to uncovered watercourses at each end.
	allowed values:	False		No Information		True	
	Covered Drain Length	1	-999999.0	Real	Metre	0	The length of a watercourse section that is completely covered over and connects to uncovered watercourses at each end.
	allowed values:	-999999.0					
	Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	allowed values:	-999999.0					
	Deck Level	1	-999999	Integer	unitless	0	The relative level of a deck within a set of vertically stacked decks, one over another, in a transportation structure (for example: on a bridge or in a tunnel). [Description] The lowest deck is numbered '1' and the remaining decks are numbered in ascending order (bottom to top) with the uppermost deck being assigned the highest value. When no deck is present, the deck level is zero.
	allowed values:	-999999					
	Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
	allowed values:	-999999.0					
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	allowed values:	noInformation					
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	allowed values:	Intermittent Partially Operational		No Information Planned		Non-operational Temporarily Non-operational Operational	
New	Feature Code	1	BH030	CONSTRAINED_STRING	Unitless	5	Feature Code
	allowed values:	BH030					

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation							
	Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information							
	Geographic Name Information : Geographic Name Type	3	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> <div> Conventional Native Transliterated Unverified Original </div> <div> Historical Original No Information Unverified Transliterated </div> <div> Historical Transliterated Other Variant Original </div> <div> Native Original Provisional Variant Transliterated </div>							
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0							
	Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999.0							
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry							
	Least Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling. The least depth below surface level may be located at ground or water level and therefore have a value of zero (for example: an opencast extraction mine, a terrain depression or a lake). For depths defined with respect to a time-varying water level, consideration should be given to the use of Attribute: 'Hydrographic Depth'.
<i>allowed values:</i> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0							

Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Maximum Design Water Depth	1	-999999.0	Real	Metre	0	The maximum depth of water that the object was designed to hold.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information		True	
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information		Destroyed Unmaintained	
					Dismantled	
Predominant Average Water Velocity	1	-999999.0	REAL	Metre per Second	0	The average water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i> -999999.0						
Predominant Maximum Water Depth	1	-999999.0	REAL	Metre	0	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> -999999.0						
Predominant Maximum Water Velocity	1	-999999.0	REAL	Metre per Second	0	The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i> -999999.0						
Predominant Minimum Water Depth	1	-999999.0	REAL	Metre	0	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> -999999.0						
Predominant Minimum Water Velocity	1	-999999.0	REAL	Metre per Second	0	The average minimum (seasonal low water) water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i> -999999.0						
Predominant Water Depth	1	-999999.0	REAL	Metre	0	The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999.0, -999999.0]			-999999.0			
Inland Waterbody Bank : Predominant Waterbody Bank Height	1	[-999999.0, -999999.0]	REAL_INTERVAL	metre	0	The predominant height (the height of at least 50 percent) of the bank, measured from mean water level to the first break in slope above the mean water level.
<i>allowed values:</i> [-999999.0, -999999.0]						
<i>allowed values:</i> [-999999.0, -999999.0]						

Inland Waterbody Bank : Predominant Waterbody Bank Slope	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The predominant slope (the slope of at least 50 percent) of the bank, measured from mean water level to the first accessible break in slope above the mean water level. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
<i>allowed values:</i> [-999999.0, -999999.0]						
<i>allowed values:</i> [-999999.0, -999999.0]						
Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).
<i>allowed values:</i> Depressed Raised						
Level						
No Information						
Not Applicable						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information						
Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non- intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner- producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Inland Waterbody Bank : Shoreline Delineated (first bank)	1	No Information	Boolean	Unitless	0	An indication that the delineation of a shoreline is definite. [Description] The delineation of the shoreline along a beach is typically definite whereas along a mangrove swamp it is typically indefinite.

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Supported by Bridge Span	1	No Information	Boolean	Unitless	0	The object is at least partially supported by, or passes across, a bridge span. [Description] For example, an aqueduct carried across a valley by one or more bridge spans.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Terrain Gap Width	1	-999999.0	REAL	metre	0	The minimum horizontal bridging distance necessary to cross a channel. [Description] The width is measured perpendicular to the direction of water flow from bank to bank, at the first usable break in slope on each side of the channel above mean high water. Usable banks are those accessible by vehicles; small unusable ledges and cliffs are not considered usable breaks in slopes.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
<i>allowed values:</i> Below Ground Surface			No Information			On Surface
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
New Water Resource Information : Water Flow	1	-999999.0	Real	Litres per Minute	0	The rate of water flow through or exiting from a feature.
<i>allowed values:</i> -999999.0						
New Water Resource Information : Water Flow Rate Category	1	No Information	Enumeration	Unitless	0	Value used to categorize streams, canals, rivers and other flowing water given the quantity of water flow. The categories correspond to specifications for water purification units in order to allow for quick identification of areas of water flow that are most suitable for placement of water purification equipment.
<i>allowed values:</i> Large Small			Moderate			No Information Other
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).

<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable No Information Treatable Nonpotable Other						
New Water Resource Information : Water Pump Accessibility	1	No Information	Enumeration	Unitless	0	The approachable or easily entered side of a water source where portable equipment including pumps and pipes may be placed into the water source and used with nearby portable equipment. [Description] Provides an indication of whether it is possible access the water for the purpose of connecting portable water pumping equipment to temporary purification units. Accessibility must meet distance requirements in the transport of water: 100 m horizontal and 10 m vertical.
<i>allowed values:</i> From All Sides From Right No Information From East From South From Left From West From North No Accessibility						
New Water Resource Information : Water Stage	1	No Information	Enumeration	Unitless	0	The flow stage of a stream or canal.
<i>allowed values:</i> High Other Low Mean No Information						
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline Brackish No Information Seawater Brine Not Applicable Fresh Other						
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic Commercial Livestock Other Domestic Irrigation Military Power Generation Industrial Municipal Recreational						
Inland Waterbody Bank : Waterbody Bank Height (first bank)	1	-999999.0	REAL	metre	0	The height of the waterbody bank above the average water level.
<i>allowed values:</i> -999999.0 <i>allowed values:</i> -999999.0						
Inland Waterbody Bank : Waterbody Bank Vegetation Cover (first bank)	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The fraction of vegetation cover on the bank of a watercourse.
<i>allowed values:</i> [-999999.0, -999999.0] <i>allowed values:</i> [-999999.0, -999999.0]						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0

Feature Ditch (Line)New ☐ Ditch

An artificial waterway with no flow, or a controlled flow, usually unlined, used for draining or irrigating land.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Inland Waterbody Bank : Above Water Bank Slope (first bank)	1	-999999.0	REAL	percent	0	The amount of upward inclination between the horizontal surface of the mean water level of a watercourse where it touches the bank and the top of the first usable break in slope, measured at the same point on the upper bank as the military gap width. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
<i>allowed values:</i> -999999.0						
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Average Water Depth	1	[-999999.0, -999999.0]	Real_Interval	Metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999.0, -999999.0]			-999999.0			
Inland Waterbody Bank : Bank Orientation (first bank)	1	No Information	Enumeration	Unitless	0	The relative orientation of a bank of an inland waterbody based on the direction of predominant water flow in the adjacent waterbody.
<i>allowed values:</i> Indeterminate			Left		No Flow	No Information
<i>allowed values:</i> Other			Right			
<i>allowed values:</i> Indeterminate			Left		No Flow	No Information
<i>allowed values:</i> Other			Right			
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Bottom Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing the bottom of a body of water.

New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i>	[-999999, -999999]					
	Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<i>allowed values:</i>	-999999.0					
	Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<i>allowed values:</i>	-999999.0					
	Contained within Tunnel	1	No Information	Boolean	Unitless	0	The object is at least partially located within, or passes through, a tunnel. [Description] For example, a canal passing through a tunnel.
	<i>allowed values:</i>	False		No Information		True	
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i>	No Information		Other		Private Public	
	Covered Drain	1	No Information	Boolean	Unitless	0	An indication that a watercourse section is completely covered over and connects to uncovered watercourses at each end.
	<i>allowed values:</i>	False		No Information		True	
	Covered Drain Length	1	-999999.0	Real	Metre	0	The length of a watercourse section that is completely covered over and connects to uncovered watercourses at each end.
	<i>allowed values:</i>	-999999.0					
	Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i>	-999999.0					
	Deck Level	1	-999999	Integer	unitless	0	The relative level of a deck within a set of vertically stacked decks, one over another, in a transportation structure (for example: on a bridge or in a tunnel). [Description] The lowest deck is numbered '1' and the remaining decks are numbered in ascending order (bottom to top) with the uppermost deck being assigned the highest value. When no deck is present, the deck level is zero.
	<i>allowed values:</i>	-999999					
	Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
	<i>allowed values:</i>	-999999.0					
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i>	noInformation					
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i>	Intermittent Partially Operational		No Information Planned		Non-operational Temporarily Non-operational Operational	
New	Feature Code	1	BH030	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i>	BH030					

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation							
	Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information							
	Geographic Name Information : Geographic Name Type	3	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> <div> Conventional Native Transliterated Unverified Original </div> <div> Historical Original No Information Unverified Transliterated </div> <div> Historical Transliterated Other Variant Original </div> <div> Native Original Provisional Variant Transliterated </div>							
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0							
	Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999.0							
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry							
	Least Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling. The least depth below surface level may be located at ground or water level and therefore have a value of zero (for example: an opencast extraction mine, a terrain depression or a lake). For depths defined with respect to a time-varying water level, consideration should be given to the use of Attribute: 'Hydrographic Depth'.
<i>allowed values:</i> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0							

Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Maximum Design Water Depth	1	-999999.0	Real	Metre	0	The maximum depth of water that the object was designed to hold.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information		True	
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information		Destroyed Unmaintained Dismantled	
Predominant Average Water Velocity	1	-999999.0	REAL	Metre per Second	0	The average water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i> -999999.0						
Predominant Maximum Water Depth	1	-999999.0	REAL	Metre	0	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> -999999.0						
Predominant Maximum Water Velocity	1	-999999.0	REAL	Metre per Second	0	The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i> -999999.0						
Predominant Minimum Water Depth	1	-999999.0	REAL	Metre	0	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> -999999.0						
Predominant Minimum Water Velocity	1	-999999.0	REAL	Metre per Second	0	The average minimum (seasonal low water) water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i> -999999.0						
Predominant Water Depth	1	-999999.0	REAL	Metre	0	The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999.0, -999999.0]			-999999.0			
Inland Waterbody Bank : Predominant Waterbody Bank Height	1	[-999999.0, -999999.0]	REAL_INTERVAL	metre	0	The predominant height (the height of at least 50 percent) of the bank, measured from mean water level to the first break in slope above the mean water level.
<i>allowed values:</i> [-999999.0, -999999.0]						
<i>allowed values:</i> [-999999.0, -999999.0]						

Inland Waterbody Bank : Predominant Waterbody Bank Slope	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The predominant slope (the slope of at least 50 percent) of the bank, measured from mean water level to the first accessible break in slope above the mean water level. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
<i>allowed values:</i> [-999999.0, -999999.0]						
<i>allowed values:</i> [-999999.0, -999999.0]						
Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).
<i>allowed values:</i> Depressed Raised						
Level						
No Information						
Not Applicable						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information						
Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non- intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner- producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Inland Waterbody Bank : Shoreline Delineated (first bank)	1	No Information	Boolean	Unitless	0	An indication that the delineation of a shoreline is definite. [Description] The delineation of the shoreline along a beach is typically definite whereas along a mangrove swamp it is typically indefinite.
<i>allowed values:</i> False						
No Information						
True						
<i>allowed values:</i> False						
No Information						
True						
Inland Waterbody Bank : Shoreline Type (first bank)	1	No Information	Enumeration	Unitless	0	The physical characteristics of a shoreline.

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Supported by Bridge Span	1	No Information	Boolean	Unitless	0	The object is at least partially supported by, or passes across, a bridge span. [Description] For example, an aqueduct carried across a valley by one or more bridge spans.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Terrain Gap Width	1	-999999.0	REAL	metre	0	The minimum horizontal bridging distance necessary to cross a channel. [Description] The width is measured perpendicular to the direction of water flow from bank to bank, at the first usable break in slope on each side of the channel above mean high water. Usable banks are those accessible by vehicles; small unusable ledges and cliffs are not considered usable breaks in slopes.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
<i>allowed values:</i> Below Ground Surface			No Information			On Surface
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
New Water Resource Information : Water Flow	1	-999999.0	Real	Litres per Minute	0	The rate of water flow through or exiting from a feature.
<i>allowed values:</i> -999999.0						
New Water Resource Information : Water Flow Rate Category	1	No Information	Enumeration	Unitless	0	Value used to categorize streams, canals, rivers and other flowing water given the quantity of water flow. The categories correspond to specifications for water purification units in order to allow for quick identification of areas of water flow that are most suitable for placement of water purification equipment.
<i>allowed values:</i> Large Small			Moderate			No Information Other
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).

<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable No Information Treatable Nonpotable Other						
New Water Resource Information : Water Pump Accessibility	1	No Information	Enumeration	Unitless	0	The approachable or easily entered side of a water source where portable equipment including pumps and pipes may be placed into the water source and used with nearby portable equipment. [Description] Provides an indication of whether it is possible access the water for the purpose of connecting portable water pumping equipment to temporary purification units. Accessibility must meet distance requirements in the transport of water: 100 m horizontal and 10 m vertical.
<i>allowed values:</i> From All Sides From Right No Information From East From South From Left From West From North No Accessibility						
New Water Resource Information : Water Stage	1	No Information	Enumeration	Unitless	0	The flow stage of a stream or canal.
<i>allowed values:</i> High Other Low Mean No Information						
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline Brackish No Information Seawater Brine Not Applicable Fresh Other						
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic Commercial Livestock Other Domestic Irrigation Military Power Generation Industrial Municipal Recreational						
Inland Waterbody Bank : Waterbody Bank Height (first bank)	1	-999999.0	REAL	metre	0	The height of the waterbody bank above the average water level.
<i>allowed values:</i> -999999.0 <i>allowed values:</i> -999999.0						
Inland Waterbody Bank : Waterbody Bank Vegetation Cover (first bank)	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The fraction of vegetation cover on the bank of a watercourse.
<i>allowed values:</i> [-999999.0, -999999.0] <i>allowed values:</i> [-999999.0, -999999.0]						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0

Feature DitchAON (Area)New ☒ Ditch Area of Numerous

Area of numerous artificial waterways with no flow, or a controlled flow, usually unlined, used for draining or irrigating land.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Inland Waterbody Bank : Above Water Bank Slope (first bank)	1	-999999.0	REAL	percent	0	The amount of upward inclination between the horizontal surface of the mean water level of a watercourse where it touches the bank and the top of the first usable break in slope, measured at the same point on the upper bank as the military gap width. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
<i>allowed values:</i> -999999.0						
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> No Information			Other			Private Public
Covered Drain	1	No Information	Boolean	Unitless	0	An indication that a watercourse section is completely covered over and connects to uncovered watercourses at each end.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.

<u>allowed values:</u> -999999.0						
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<u>allowed values:</u> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<u>allowed values:</u> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<u>allowed values:</u> Intermittent Partially Operational						
No Information Planned Non-operational Temporarily Non-operational Operational						
New Feature Code	1	NM030	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> NM030						
Feature Count	1	-999999	Integer	Unitless	0	The number of features of the same type within a defined region. [Description] May be used to indicate the number of features actually present in near proximity to each other although only one representative feature is collected. For example, the number of adjacent pipelines.
<u>allowed values:</u> -999999						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<u>allowed values:</u> noInformation						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> No Information						
Other						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999.0						
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<u>allowed values:</u> Dry						
Intermittent						
No Information						
Perennial						
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<u>allowed values:</u> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False						
No Information						
True						

Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact Damaged No Information Destroyed Unmaintained Dismantled						
Predominant Average Water Velocity	1	-999999.0	REAL	Metre per Second	0	The average water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i> -999999.0						
Predominant Water Depth	1	[-999999.0, -999999.0]	Real_Interval	Metre	0	The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999.0, -999999.0]						
Inland Waterbody Bank : Predominant Waterbody Bank Height	1	[-999999.0, -999999.0]	REAL_INTERVAL	metre	0	The predominant height (the height of at least 50 percent) of the bank, measured from mean water level to the first break in slope above the mean water level.
<i>allowed values:</i> [-999999.0, -999999.0] <i>allowed values:</i> [-999999.0, -999999.0]						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non- intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Inland Waterbody Bank : Shoreline Delineated (first bank)	1	No Information	Boolean	Unitless	0	An indication that the delineation of a shoreline is definite. [Description] The delineation of the shoreline along a beach is typically definite whereas along a mangrove swamp it is typically indefinite.
<i>allowed values:</i> False			No Information			True
<i>allowed values:</i> False			No Information			True
Inland Waterbody Bank : Shoreline Type (first bank)	1	No Information	Enumeration	Unitless	0	The physical characteristics of a shoreline.
<i>allowed values:</i> Building Rubble Marshy Sandy			Erosion Rubble Mud Shingly			Ice No Information Stony
<i>allowed values:</i> Building Rubble Marshy Sandy			Erosion Rubble Mud Shingly			Ice No Information Stony
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						

	Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
	<i>allowed values:</i> -999999.0						
	Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
	<i>allowed values:</i> Contaminated Potable			No Information Treatable		Nonpotable	Other
New	Water Resource Information : Water Pump Accessibility	1	No Information	Enumeration	Unitless	0	The approachable or easily entered side of a water source where portable equipment including pumps and pipes may be placed into the water source and used with nearby portable equipment. [Description] Provides an indication of whether it is possible access the water for the purpose of connecting portable water pumping equipment to temporary purification units. Accessibility must meet distance requirements in the transport of water: 100 m horizontal and 10 m vertical.
	<i>allowed values:</i> From All Sides From Right No Information			From East From South		From Left From West	From North No Accessibility
	Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
	<i>allowed values:</i> Alkaline Mineral Saline			Brackish No Information Seawater		Brine Not Applicable	Fresh Other
	Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
	<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic			Commercial Livestock Other		Domestic Irrigation Military Power Generation	Industrial Municipal Recreational
	Inland Waterbody Bank : Waterbody Bank Height (first bank)	1	-999999.0	REAL	metre	0	The height of the waterbody bank above the average water level.
	<i>allowed values:</i> -999999.0						
	Inland Waterbody Bank : Waterbody Bank Vegetation Cover (first bank)	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The fraction of vegetation cover on the bank of a watercourse.
	<i>allowed values:</i> [-999999.0, -999999.0] <i>allowed values:</i> [-999999.0, -999999.0]

Feature Dolphin (Point)

New ☐ Dolphin

A post or group of posts used for mooring, warping a ship or as an aid to navigation.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						

	Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
	<i>allowed values:</i> noInformation						
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	BB080	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BB080						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Length	1	-999999.0	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMNonIC
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMOwnerProducer
<i>allowed values:</i>	noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat)' (CSP:Okra) (FMM:Organic Techniques) could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i>	noInformation					
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

 DragonsTeeth (Area) - is a member of group - Exactly one - MilitarySrf (FeatureGroup)

Feature DragonsTeeth (Line)

New ☐ Dragon's Teeth

Upward-pointing obstacles laid in the ground to slow or stop the movement of vehicles. [Description] Typically constructed of regularly spaced concrete or metal shapes laid in single or multiple rows.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.

allowed values: -999999.0

Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
--------------------------------	---	---------------	----------------	----------	----	---

allowed values: noInformation

New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational		Operational
New	Feature Code	1	AL060	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AL060						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information		Other				
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<i>allowed values:</i> Construction Intact		Damaged No Information		Destroyed Unmaintained		Dismantled
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumlSMClassificationAll

allowed values: U

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
---	---	----------------	----------	----------	----	---

allowed values: No Information

Other

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
---	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Restriction Information : Security Attributes Group <resource non- intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
---	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Restriction Information : Security Attributes Group <resource owner- producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
--	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	--

allowed values: noInformation

Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
--------------------------	---	----------------	-------------	----------	---	---

allowed values: Concrete
Stone

No Information

Other

Steel

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
--------------------------	---	---------------	----------------	----------	-----	--

allowed values: noInformationallowed values: pimGUID

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: noInformation

Hydrographic Depth : Sounding Metadata : Sounding Datum	1	No Information	Enumeration	Unitless	0	The tidal datum to which soundings and drying heights are referenced. [Description] It is usually taken to correspond to a low water stage of the tide.
---	---	----------------	-------------	----------	---	---

<u>allowed values:</u>	Approximate Lowest Astronomical Tide	Approximate Mean Low Water	Approximate Mean Low Water Springs	Approximate Mean Lower Low Water
	Approximate Mean Sea Level	Chart Datum (Unspecified)	Equinoctial Spring Low Water	High Water
	High Water Springs	Higher High Water	Higher High Water Large Tide	Highest Astronomical Tide
	Highest High Water	Indian Spring High Water	Indian Spring Low Water	International Great Lakes Datum 1985
	Local Datum	Low Water	Low Water Springs	Lower Low Water
	Lower Low Water Large Tide	Lowest Astronomical Tide	Lowest Low Water	Lowest Low Water Springs
	Mean High Water	Mean High Water Neaps	Mean High Water Springs	Mean Higher High Water
	Mean Higher High Water Springs	Mean Low Water	Mean Low Water Neaps	Mean Low Water Springs
	Mean Lower Low Water	Mean Lower Low Water Springs	Mean Sea Level	Mean Tide Level
	Mean Water Level	Neap Tide	Nearly Highest High Water	Nearly Lowest Low Water
	No Information	Other	Spring Tide	

Hydrographic Depth : Sounding Metadata : Sounding Datum Name	1	No Information	String	Unitless	80	The name of the tidal datum to which soundings and drying heights are referenced. [Description] Used when the sounding datum is known but not specified using Attribute: 'Sounding Datum'.
--	---	----------------	--------	----------	----	--

allowed values: No Information

Hydrographic Depth : Sounding Metadata : Sounding Velocity Correction Method	1	No Information	Enumeration	Unitless	0	The method of correction that has been used to correct a sounding velocity instrument reading to obtain the correct depth.
--	---	----------------	-------------	----------	---	--

<i>allowed values:</i>	Mathews Tables	No Information	<i>Not Applicable</i>			Other
	Sound Velocity Meter		Sounder 1500 Calibrated		Sounder 4800 Calibrated	Sounder Other Calibrated
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID

Feature **DriveInTheatre (Area)** New ☐ Drive-in Theatre

A place where motion pictures are shown while viewers remain in their vehicles.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.

allowed values: -999999.0

Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other Joint Military and Civilian Private Military Public No Information						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational						
New Feature Code	1	AK070	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AK070						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Amusement Hobbies and/or Leisure Activities Recreation Cinema Meeting Place Restroom Convenience Store No Information Emergency Operations Other						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencl . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information Other

<i>allowed values:</i> Conventional Native Transliterated Unverified Original Historical Original No Information Unverified Transliterated Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated						

Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact						
Damaged						
Destroyed						
Dismantled						
Unmaintained						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

[EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Boulders No Information Rock Treated Timber			Concrete Other Rubble Wood			Masonry Prestressed Concrete Soil Metal Reinforced Concrete Steel

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Usable Length	1	-999999.0	REAL	metre	0	The interior length of a structure (for example: an aircraft bunker or a lock). [Description] The length is taken along the primary alignment of the structure. If the structure is irregular in shape the length is along its greatest horizontal dimension, else if the structure is regular in shape then a shape-specific rule may apply: for a rectangular structure, the length of the longer axis; for a round structure, the diameter.
<i>allowed values:</i> -999999.0						
Usable Width	1	-999999.0	REAL	metre	0	The interior width of a structure. [Description] For example, an aircraft bunker or a lock.
<i>allowed values:</i> -999999.0						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature ElectricPowerStation (Area)

New ☐ Electric Power Station

A facility including one or more buildings and equipment used for electric power generation. [Description] An electric power station consists of one or more power generating units, each consisting of the full set of equipment required to generate power and capable of independent operation. The power generating units are located on one or more contiguous or adjacent properties, are under the common control of the same entity and supply power through a common connection to the electric grid. Electric power stations most commonly are used to generate electricity for long distance transmission.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						

	Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
	<i>allowed values:</i> noInformation						
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
	Electrical Power Generation Capacity	1	-999999.0	Real	Megawatt	0	The maximum electrical power generating capacity of a facility.
	<i>allowed values:</i> -999999.0						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	AD010	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AD010						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						

Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact						
Damaged No Information						
Destroyed Unmaintained						
Dismantled						
Power Source	3	No Information	Enumeration	Unitless	0	The energy source(s) employed to generate power for off-site distribution.
<i>allowed values:</i> Geothermal Other						
Hydro-electric Thermal						
No Information Tidal						
Nuclear						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information						
Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information			True

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained Dismantled
Power Source	3	No Information	Enumeration	Unitless	0	The energy source(s) employed to generate power for off-site distribution.
<i>allowed values:</i>	Geothermal Other		Hydro-electric Thermal			No Information Tidal Nuclear
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i>	noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i>	noInformation					

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> <div>Brick</div> <div>Metal</div> <div>Reinforced Concrete</div> <div>Concrete</div> <div>No Information</div> <div>Steel</div> <div>Iron</div> <div>Other</div> <div>Stone</div> <div>Masonry</div> <div>Prestressed Concrete</div> <div>Wood</div>						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

New	Feature Code	1	CA010	CONSTRAINED_ STRING	Unitless	5	Feature Code
	<i>allowed values:</i> CA010						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						
	Hypsography Portrayal Type	1	No Information	Enumeration	Unitless	0	The type of a hypsographic portrayal line (for example: a contour line) based on the topography represented and/or portrayal interval. [Description] A contour line is an imaginary line on the ground connecting an infinite number of points of equal elevation. The vertical measurement between two contour lines is called the contour interval. Contour lines are numbered to indicate the elevation value of the contour line.

allowed values: noInformation

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	DB090	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> DB090						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencl . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Grading Type	1	No Information	Enumeration	Unitless	0	The number of terrain feature sides on which either fill or cut material is exposed. [Description] For example, along two sides of a road that is both cut into the side of a hill and supported by fill on the downslope.
	<i>allowed values:</i> Many Sides Other			No Information Two Sides			No Sides One Side

Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact						
Damaged No Information						
Destroyed Unmaintained						
Dismantled						
Predominant Feature Height	1	-999999.0	REAL	metre	0	The predominant height (the height of at least 50 percent) of the feature measured from the lowest point of the base at ground or water level (downhill side/downstream side).
<i>allowed values:</i> -999999.0						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumlSMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information						
Other						

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Boulders Masonry Rubble			Concrete No Information Soil			Gravel Other Lava Rock
Surface Slope	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.
<i>allowed values:</i> [-999999.0, -999999.0]						
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> Aqueduct Other			Canal Pipeline			No Information Railway No Transportation System Road
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID						
Water Level Effect	1	No Information	Enumeration	Unitless	0	The relationship between the feature and surrounding (including covering and/or underlying) water.

<i>allowed values:</i>	Always Dry	1	-999999.0	Always Submerged	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Embankment (Line) New ☐ Embankment

A man-made raised long mound of earth or other material.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other						
			Joint Military and Civilian Private			Military Public No Information
Embankment Type	1	No Information	Enumeration	Unitless	0	The type of an embankment based on its use and/or relationship to the surrounding terrain.
<i>allowed values:</i> Divider Mound						
			Dyke No Information			Fill Other Levee
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational						
			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	DB090	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> DB090						

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<u>allowed values:</u> noInformation							
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> No Information							
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<u>allowed values:</u> Conventional Native Transliterated Unverified Original							
Historical Original No Information Unverified Transliterated							
Historical Transliterated Other Variant Original							
Native Original Provisional Variant Transliterated							
	Grading Type	1	No Information	Enumeration	Unitless	0	The number of terrain feature sides on which either fill or cut material is exposed. [Description] For example, along two sides of a road that is both cut into the side of a hill and supported by fill on the downslope.
<u>allowed values:</u> Many Sides Other							
No Information Two Sides							
No Sides One Side							
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information							
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information							
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.

<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Predominant Feature Height	1	-999999.0	REAL	metre	0	The predominant height (the height of at least 50 percent) of the feature measured from the lowest point of the base at ground or water level (downhill side/downstream side).
<i>allowed values:</i> -999999.0						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. New Feature Code	1	AH025	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> AH025						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<u>allowed values:</u> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> No Information						
Other						
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<u>allowed values:</u> Conventional Native Transliterated Unverified Original						
Historical Original No Information Unverified Transliterated						
Historical Transliterated Other Variant Original						
Native Original Provisional Variant Transliterated						
Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The intended use(s) of a designated hazard protection shelter based on the kind of emergency. [Description] Hazard shelters may be located inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.

allowed values:	Bomb Shelter Storm Shelter		Fallout Shelter		No Information	Other
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values:	-999999.0					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values:	No Information					
Military Service Branch	1	No Information	Enumeration	Unitless	0	The branch of the armed forces of a nation. [Description] May also be applied to similar organizations following military discipline (for example: a coastguard).
allowed values:	Air Force Marines		Army Navy		Coastguard No Information	Joint Other
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values:	No Information					
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values:	False		No Information		True	
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
allowed values:	Construction Intact		Damaged No Information		Destroyed Unmaintained	Dismantled
Predominant Feature Height	1	[-999999.0, -999999.0]	REAL_INTERVAL	Metre	0	The predominant height (the height of at least 50 percent) of the feature measured from the lowest point of the base at ground or water level (downhill side/downstream side).
allowed values:	[-999999.0, -999999.0]					
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISClassificationAll
allowed values:	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
allowed values:	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISDissem
allowed values:	noInformation					

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Terrain Gap Width	1	-999999.0	REAL	metre	0	The minimum horizontal bridging distance necessary to cross a channel. [Description] The width is measured perpendicular to the direction of water flow from bank to bank, at the first usable break in slope on each side of the channel above mean high water. Usable banks are those accessible by vehicles; small unusable ledges and cliffs are not considered usable breaks in slopes.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature EngineeredEarthwork (Line)

New ☐ Engineered Earthwork

An excavation and/or embankment created by remolding the natural configuration of the terrain for the purpose of enhancing the defense of a site from armed attack.

[Description] The earthwork may include ancillary elements (for example: a palisade) or reinforcements (for example: a concrete facing).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						
Engineered Earthwork Type	1	No Information	Enumeration	Unitless	0	The type of an excavation and/or embankment created for the purpose of enhancing the defense of a site from armed attack.
<i>allowed values:</i> Battery Other			Military Parapet Rampart			Military Trench Redoubt No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AH025	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AH025						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Feature EngineeredTurnaroundSite (Point)

New ☒ Engineered Turnaround Site

A shaped area at the terminus of a local street that provides sufficient turning space allowing incoming traffic to turn around and exit without performing a stop-and-change-direction manoeuvre. [Description] The site is intended to slow down and control the flow of vehicular traffic leaving the main avenue. Construction is typically in the form of a defined shape (for example: circle, loop, or crescent). Access to the shaped turnaround site is provided through a single inlet passageway and along a short, connecting street. Traffic flow proceeds continuously around the turnaround site (in whatever shape and degree of utility). Egress is provided back along the same short, connecting street through a single outlet. The single inlet and single outlet are the same passageways. A median-like structure may exist in the center of the turnaround site, thus ensuring a well-defined pattern of vehicle movement. In residential areas the turnaround site often has multiple adjoining properties, each of which may have a separate driveway and/or defined parking area along the perimeter of the shaped area.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	Real	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	AP033	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AP033						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Median Present	1	No Information	Boolean	Unitless	0	An indication that the lanes or tracks of a divided land transportation route (for example: a road or a railway) are separated by a vertical median barrier. [Description] Often used to separate opposing flows of traffic in order to improve safety. For example, may be a substantial concrete barrier of approximately 1 metre height.
	<i>allowed values:</i> False			No Information		True	
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<i>allowed values:</i> Construction Intact			Damaged No Information		Destroyed Unmaintained	Dismantled
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
	<i>allowed values:</i> U						
	Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
	<i>allowed values:</i> No Information			Other			
	Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMDissem
	<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Route Pavement Information : Road Weather Restriction	1	No Information	Enumeration	Unitless	0	The type of weather conditions under which a road is usable.
<i>allowed values:</i> All-weather No Information			Closed in Winter Other			Fair-weather Winter Only Limited All-weather
Route Pavement Information : Route Surface Composition	1	No Information	Enumeration	Unitless	0	The composition(s) of a durable surface (for example: a pavement) intended to sustain ground traffic (for example: vehicular traffic or foot traffic). [Description] Depending on the traffic situation (for example: on a floor, in a courtyard, or on a road) different compositions may be used, however in general such surfaces are composed of pieces of a hard material fitted closely together (for example: cobble-stone or brick) or of an undivided hard layer (for example: concrete) so as to give a compact, uniform, and smooth surface.
<i>allowed values:</i> Aggregate Brick Flexible Pavement No Information Stabilized Earth			Asphalt Cobble-stone Ice Other Unimproved			Asphalt over Concrete Concrete Macadam Rigid Pavement Wood Bound Surface Corduroy Metal Snow Wood Plank
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> No Information			noInformation			
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature EngineTestCell (Area) New ☐ Engine Test Cell

A structure wherein aircraft or rocket engines are tested. [Description] The most common test cells are used for testing the performance characteristics of jet engines and are typically located at military aerodromes or aerospace research and development facilities. Test cells for liquid-fueled rocket booster engines are unique, massive structures (for example: the test cell located at Stennis Space Flight Center in the U.S.).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<u>allowed values:</u> False			No Information			True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<u>allowed values:</u> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> No Information						
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Other			
			Historical Original No Information Unverified Transliterated	Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated	
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> <i>-999999.0</i>						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> <i>-999999.0</i>						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> <i>-999999.0</i>						
Location Referenced to Shoreline	1	No Information	Enumeration	Unitless	0	The location of an object in relation to a land water boundary.
<u>allowed values:</u> At Shoreline			Inland	No Information		
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> <i>False</i>			No Information			<i>True</i>
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.

<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained	Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.	
<i>allowed values:</i> noInformation							
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).	
<i>allowed values:</i> noInformation							
<i>allowed values:</i> pimGUID							
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.	

allowed values: *noInformation*

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature EngineTestCell (Point)New ☐ Engine Test Cell

A structure wherein aircraft or rocket engines are tested. [Description] The most common test cells are used for testing the performance characteristics of jet engines and are typically located at military aerodromes or aerospace research and development facilities. Test cells for liquid-fueled rocket booster engines are unique, massive structures (for example: the test cell located at Stennis Space Flight Center in the U.S.).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<u>allowed values:</u> <i>False</i>			<i>No Information</i>			<i>True</i>
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<u>allowed values:</u> <i>-999999.0</i>						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<u>allowed values:</u> <i>-999999.0</i>						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<u>allowed values:</u> <i>noInformation</i>						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<u>allowed values:</u> <i>[-999999, -999999]</i>						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<u>allowed values:</u> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Engine Test Cell Type	1	No Information	Enumeration	Unitless	0	The type of an engine test cell based on the purpose for which it was designed.
<u>allowed values:</u> Jet Engine Dismounted Rocket Engine Horizontal			Jet Engine Mounted Rocket Engine Upright			No Information Other
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<u>allowed values:</u> <i>noInformation</i>						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.

		<i>allowed values:</i> No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational	Operational
New	Feature Code	1	AF060	CONSTRAINED_ STRING	Unitless	5	Feature Code
		<i>allowed values:</i> AF060					
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
		<i>allowed values:</i> noInformation					
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
		<i>allowed values:</i> No Information					
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
		<i>allowed values:</i> No Information					
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
		<i>allowed values:</i> Conventional Native Transliterated Unverified Original					
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
		<i>allowed values:</i> -999999.0					
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
		<i>allowed values:</i> -999999.0					
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
		<i>allowed values:</i> -999999.0					
	Location Referenced to Shoreline	1	No Information	Enumeration	Unitless	0	The location of an object in relation to a land water boundary.
		<i>allowed values:</i> At Shoreline					
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
		<i>allowed values:</i> No Information					
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.

<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False						
No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact						
Damaged No Information						
Destroyed Unmaintained						
Dismantled						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information						
Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques))' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques))' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature EntityCollectionMetadata (Area)New ☒ Entity Collection Metadata

A modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] For example, the currency of the information known about an entity collection or the degree to which the properties of an entity collection are accurately and/or completely determined. An entity collection consists of instances of one or more modeling entities that were selected according to a common rationale (for example: based on a theme or spatial region).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Absolute Horizontal Accuracy (90%)	1	-999999.0	REAL	metre	0	Either the difference between the recorded horizontal coordinate value(s) of a feature and its true position referenced to the same geodetic datum expressed as a linear error at 90 percent probability for a single coordinate value, or a circular error at 90 percent probability for a pair of coordinate values, or the reason that the value is absent. [Description] The domain of values is a real number. For example, 10.0 (as in the accuracy in metres).
<i>allowed values:</i> -999999.0						
Absolute Vertical Accuracy (90%)	1	-999999.0	REAL	metre	0	The difference between the recorded elevation of a feature and its true elevation referenced to the same vertical datum expressed as a linear error at 90 percent probability.
<i>allowed values:</i> -999999.0						
Data Quality Statement	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records a general assessment of the quality of a resource (for example: a data instance, a data set or a data processing activity). [Description] The quality of a data resource is dependent on the data providers knowledge regarding the lineage of the data and the processes that have been used to transform that data. No restriction is placed on the length of the statement.

allowed values: No Information

	Elevation Vertical Accuracy (90%)	1	-999999.0	REAL	metre	0	Either the difference between a recorded elevation value and the true elevation referenced to the same vertical datum, expressed as a linear error at 90 percent probability, or the reason that the value is absent. [Description] The domain of values is a real number. For example, 10.0 (as in the accuracy in metres).
	<i>allowed values:</i> -999999.0						
	Equivalent Scale	1	-999999	Integer	Unitless	0	The denominator (for example: 50,000) of the map scale that best represents the density of feature collection within the geospatial extent of a specified region.
	<i>allowed values:</i> -999999						
New	Feature Code	1	ZI039	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> ZI039						
	Height Vertical Accuracy (90%)	1	-999999.0	REAL	metre	0	Either the difference between a recorded height value and the true height referenced to the same ground level, expressed as a linear error at 90 percent probability, or the reason that the value is absent. [Description] The domain of values is a real number. For example, 10.0 (as in the accuracy in metres).
	<i>allowed values:</i> -999999.0						
	Maintenance Date and Time	1	noInformation	StructuredText	Unitless	20	The date and, optionally, time that maintenance, based on a given Extraction Specification, was completed for the features falling within the geospatial extent of a specified region. [Description] Midnight is understood to be 00:00:00 (the beginning of a day); when the time is not specified then midnight in the local time zone is typically implied. [DatatypeSpecification] A structured text value specifying a date-time. [EncodingSpecification] Formatted in accordance with ISO 8601:2000, 5.4.1, Combinations of date and time of day - Complete representation - Extended format, a calendar date and time representation, as a single data element comprising up to twenty characters, where [YYYY] represents a calendar year, [MM] the ordinal number of a calendar month within the calendar year, [DD] the ordinal number of a day within the calendar month, [hh] the ordinal number of an hour within the calendar day, [mm] the ordinal number of a minute within the hour, [ss] the ordinal number of a second within the minute, and an optional 'Z' when the time is according to Coordinated Universal Time (UTC), as 'YYYY-MM-DDThh:mm:ssZ' (for example: '1985-04-12T11:45:20Z' for 11 hours, 45 minutes and 20 seconds UTC on 12 April 1985). Representations with reduced precision may be used in accordance with 5.4.2 (for example: '1985-04-12' for 12 April 1985). Representations consistently using basic format (eliminating the hyphen '-' and the colon ':') may be used in accordance with 5.4.1 (for example: '19850412T114520Z').
	<i>allowed values:</i> noInformation						
	Process Step Information : Process Step Description	1	No Information	String	Unitless	2E+09	A narrative or other textual description of a process step, including related processing parameters and/or tolerances. [Description] A process step is an event or transformation in the life of a dataset that is used to define, review and/or update the digital representation of a feature and/or attribute. No restriction is placed on the length of the description.
	<i>allowed values:</i> No Information						
	Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
	<i>allowed values:</i> No Information			Other			
New	Schema Version	1	noInformation	StructuredText	Unitless	254	Identifies the version of the schema used at the time of data collection.
	<i>allowed values:</i> noInformation						
New	Source Information : Source Date and Time	1	noInformation	StructuredText	Unitless	20	The date and, optionally, time of collection of the data set that was used to define the digital representation of the feature or data set. [Description] Midnight is understood to be 00:00:00 (the beginning of a day); when the time is not specified then midnight in the local time zone is typically implied. [DatatypeSpecification] A structured text value specifying a date-time. [EncodingSpecification] Formatted in accordance with ISO 8601:2000, 5.4.1, Combinations of date and time of day - Complete representation - Extended format, a calendar date and time representation, as a single data element comprising up to twenty characters, where [YYYY] represents a calendar year, [MM] the ordinal number of a calendar month within the calendar year, [DD] the ordinal number of a day within the calendar month, [hh] the ordinal number of an hour within the calendar day, [mm] the ordinal number of a minute within the hour, [ss] the ordinal number of a second within the minute, and an optional 'Z' when the time is according to Coordinated Universal Time (UTC), as 'YYYY-MM-DDThh:mm:ssZ' (for example: '1985-04-12T11:45:20Z' for 11 hours, 45 minutes and 20 seconds UTC on 12 April 1985). Representations with reduced precision may be used in accordance with 5.4.2 (for example: '1985-04-12' for 12 April 1985). Representations consistently using basic format (eliminating the hyphen '-' and the colon ':') may be used in accordance with 5.4.1 (for example: '19850412T114520Z').
	<i>allowed values:</i> noInformation						
	Source Information : Source Description	1	No Information	String	Unitless	2E+09	A description of the data set that was used to define the digital representation of the feature or data set. [Description] No restriction is placed on the length of the description.
	<i>allowed values:</i> No Information						

New	Source Information : Source Type	1	No Information	CodeList	Unitless	30	The type(s) of the data set(s) that were used to define the digital representation of the feature or data set. [Description] For example, based on a data product specification. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/SourceTypeCode
<u>allowed values:</u> No Information Other							
New	Source Information : Spatial Source	1	No Information	Boolean	Unitless	0	An indication that the source data set was used to define the digital representation of the horizontal and possible vertical coordinate values of the resulting feature or data set.
<u>allowed values:</u> False No Information True							
	Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<u>allowed values:</u> noInformation							
	Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<u>allowed values:</u> noInformation							
	Source Information : Vertical Source Category	1	No Information	CodeList	Unitless	30	The type of dataset and associated process that was used to define the digital representation of the vertical coordinate values of the feature or data set. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/VerticalSourceTypeCode
<u>allowed values:</u> No Information Other							
	Source Information : Vertical Source Date and Time	1	noInformation	StructuredText	Unitless	20	The date and, optionally, time of collection of the data that was used to define the digital representation of the vertical coordinate values of the digital feature or data set. [Description] Midnight is understood to be 00:00:00 (the beginning of a day); when the time is not specified then midnight in the local time zone is typically implied. [DatatypeSpecification] A structured text value specifying a date-time. [EncodingSpecification] Formatted in accordance with ISO 8601:2000, 5.4.1, Combinations of date and time of day - Complete representation - Extended format, a calendar date and time representation, as a single data element comprising up to twenty characters, where [YYYY] represents a calendar year, [MM] the ordinal number of a calendar month within the calendar year, [DD] the ordinal number of a day within the calendar month, [hh] the ordinal number of an hour within the calendar day, [mm] the ordinal number of a minute within the hour, [ss] the ordinal number of a second within the minute, and an optional 'Z' when the time is according to Coordinated Universal Time (UTC), as 'YYYY-MM-DDThh:mm:ssZ' (for example: '1985-04-12T11:45:20Z' for 11 hours, 45 minutes and 20 seconds UTC on 12 April 1985). Representations with reduced precision may be used in accordance with 5.4.2 (for example: '1985-04-12' for 12 April 1985). Representations consistently using basic format (eliminating the hyphen '-' and the colon ':') may be used in accordance with 5.4.1 (for example: '19850412T114520Z').

Feature EntityCollectionMetadata (Table)

New ☒ Entity Collection Metadata

A modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] For example, the currency of the information known about an entity collection or the degree to which the properties of an entity collection are accurately and/or completely determined. An entity collection consists of instances of one or more modeling entities that were selected according to a common rationale (for example: based on a theme or spatial region).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Absolute Horizontal Accuracy (90%)	1	-999999.0	REAL	metre	0	Either the difference between the recorded horizontal coordinate value(s) of a feature and its true position referenced to the same geodetic datum expressed as a linear error at 90 percent probability for a single coordinate value, or a circular error at 90 percent probability for a pair of coordinate values, or the reason that the value is absent. [Description] The domain of values is a real number. For example, 10.0 (as in the accuracy in metres).
<i>allowed values:</i> -999999.0						
Absolute Vertical Accuracy (90%)	1	-999999.0	REAL	metre	0	The difference between the recorded elevation of a feature and its true elevation referenced to the same vertical datum expressed as a linear error at 90 percent probability.
<i>allowed values:</i> -999999.0						
Data Quality Statement	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records a general assessment of the quality of a resource (for example: a data instance, a data set or a data processing activity). [Description] The quality of a data resource is dependent on the data providers knowledge regarding the lineage of the data and the processes that have been used to transform that data. No restriction is placed on the length of the statement.
<i>allowed values:</i> No Information						
Elevation Vertical Accuracy (90%)	1	-999999.0	REAL	metre	0	Either the difference between a recorded elevation value and the true elevation referenced to the same vertical datum, expressed as a linear error at 90 percent probability, or the reason that the value is absent. [Description] The domain of values is a real number. For example, 10.0 (as in the accuracy in metres).
<i>allowed values:</i> -999999.0						
Equivalent Scale	1	-999999	Integer	Unitless	0	The denominator (for example: 50,000) of the map scale that best represents the density of feature collection within the geospatial extent of a specified region.
<i>allowed values:</i> -999999						

New	Feature Code	1	ZI039	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> ZI039						
	Height Vertical Accuracy (90%)	1	-999999.0	REAL	metre	0	Either the difference between a recorded height value and the true height referenced to the same ground level, expressed as a linear error at 90 percent probability, or the reason that the value is absent. [Description] The domain of values is a real number. For example, 10.0 (as in the accuracy in metres).
	<i>allowed values:</i> -999999.0						
	Maintenance Date and Time	1	noInformation	StructuredText	Unitless	20	The date and, optionally, time that maintenance, based on a given Extraction Specification, was completed for the features falling within the geospatial extent of a specified region. [Description] Midnight is understood to be 00:00:00 (the beginning of a day); when the time is not specified then midnight in the local time zone is typically implied. [DatatypeSpecification] A structured text value specifying a date-time. [EncodingSpecification] Formatted in accordance with ISO 8601:2000, 5.4.1, Combinations of date and time of day - Complete representation - Extended format, a calendar date and time representation, as a single data element comprising up to twenty characters, where [YYYY] represents a calendar year, [MM] the ordinal number of a calendar month within the calendar year, [DD] the ordinal number of a day within the calendar month, [hh] the ordinal number of an hour within the calendar day, [mm] the ordinal number of a minute within the hour, [ss] the ordinal number of a second within the minute, and an optional 'Z' when the time is according to Coordinated Universal Time (UTC), as 'YYYY-MM-DDThh:mm:ssZ' (for example: '1985-04-12T11:45:20Z' for 11 hours, 45 minutes and 20 seconds UTC on 12 April 1985). Representations with reduced precision may be used in accordance with 5.4.2 (for example: '1985-04-12' for 12 April 1985). Representations consistently using basic format (eliminating the hyphen '-' and the colon ':') may be used in accordance with 5.4.1 (for example: '19850412T114520Z').
	<i>allowed values:</i> noInformation						
	Process Step Information : Process Step Description	1	No Information	String	Unitless	2E+09	A narrative or other textual description of a process step, including related processing parameters and/or tolerances. [Description] A process step is an event or transformation in the life of a dataset that is used to define, review and/or update the digital representation of a feature and/or attribute. No restriction is placed on the length of the description.
	<i>allowed values:</i> No Information						
	Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
	<i>allowed values:</i> No Information			Other			
New	Schema Version	1	noInformation	StructuredText	Unitless	254	Identifies the version of the schema used at the time of data collection.
	<i>allowed values:</i> noInformation						
New	Source Information : Source Date and Time	1	noInformation	StructuredText	Unitless	20	The date and, optionally, time of collection of the data set that was used to define the digital representation of the feature or data set. [Description] Midnight is understood to be 00:00:00 (the beginning of a day); when the time is not specified then midnight in the local time zone is typically implied. [DatatypeSpecification] A structured text value specifying a date-time. [EncodingSpecification] Formatted in accordance with ISO 8601:2000, 5.4.1, Combinations of date and time of day - Complete representation - Extended format, a calendar date and time representation, as a single data element comprising up to twenty characters, where [YYYY] represents a calendar year, [MM] the ordinal number of a calendar month within the calendar year, [DD] the ordinal number of a day within the calendar month, [hh] the ordinal number of an hour within the calendar day, [mm] the ordinal number of a minute within the hour, [ss] the ordinal number of a second within the minute, and an optional 'Z' when the time is according to Coordinated Universal Time (UTC), as 'YYYY-MM-DDThh:mm:ssZ' (for example: '1985-04-12T11:45:20Z' for 11 hours, 45 minutes and 20 seconds UTC on 12 April 1985). Representations with reduced precision may be used in accordance with 5.4.2 (for example: '1985-04-12' for 12 April 1985). Representations consistently using basic format (eliminating the hyphen '-' and the colon ':') may be used in accordance with 5.4.1 (for example: '19850412T114520Z').
	<i>allowed values:</i> noInformation						
	Source Information : Source Description	1	No Information	String	Unitless	2E+09	A description of the data set that was used to define the digital representation of the feature or data set. [Description] No restriction is placed on the length of the description.
	<i>allowed values:</i> No Information						
New	Source Information : Source Type	1	No Information	CodeList	Unitless	30	The type(s) of the data set(s) that were used to define the digital representation of the feature or data set. [Description] For example, based on a data product specification. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/SourceTypeCode
	<i>allowed values:</i> No Information			Other			
New	Source Information : Spatial Source	1	No Information	Boolean	Unitless	0	An indication that the source data set was used to define the digital representation of the horizontal and possible vertical coordinate values of the resulting feature or data set.
	<i>allowed values:</i> False			No Information			True

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
Source Information : Vertical Source Category	1	No Information	CodeList	Unitless	30	The type of dataset and associated process that was used to define the digital representation of the vertical coordinate values of the feature or data set. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/VerticalSourceTypeCode
<i>allowed values:</i> No Information Other						
Source Information : Vertical Source Date and Time	1	noInformation	StructuredText	Unitless	20	The date and, optionally, time of collection of the data that was used to define the digital representation of the vertical coordinate values of the digital feature or data set. [Description] Midnight is understood to be 00:00:00 (the beginning of a day); when the time is not specified then midnight in the local time zone is typically implied. [DatatypeSpecification] A structured text value specifying a date-time. [EncodingSpecification] Formatted in accordance with ISO 8601:2000, 5.4.1, Combinations of date and time of day - Complete representation - Extended format, a calendar date and time representation, as a single data element comprising up to twenty characters, where [YYYY] represents a calendar year, [MM] the ordinal number of a calendar month within the calendar year, [DD] the ordinal number of a day within the calendar month, [hh] the ordinal number of an hour within the calendar day, [mm] the ordinal number of a minute within the hour, [ss] the ordinal number of a second within the minute, and an optional 'Z' when the time is according to Coordinated Universal Time (UTC), as 'YYYY-MM-DDThh:mm:ssZ' (for example: '1985-04-12T11:45:20Z' for 11 hours, 45 minutes and 20 seconds UTC on 12 April 1985). Representations with reduced precision may be used in accordance with 5.4.2 (for example: '1985-04-12' for 12 April 1985). Representations consistently using basic format (eliminating the hyphen '-' and the colon ':') may be used in accordance with 5.4.1 (for example: '19850412T114520Z').

Feature **Esker (Line)**New ☐ **Esker****A long, narrow ridge of sand and gravel deposited by a glacial stream.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	DB100	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> DB100						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original
						Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature ExcavatingMachine (Point)

New ☐ Excavating Machine

A mechanical device for removing materials from the ground. [Description] For example, a dredger, a powershovel, and a dragline.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AF050	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AF050						

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<u>allowed values:</u> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information			True

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMNonIC
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMOwnerProducer
<i>allowed values:</i>	noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat)' (CSP:Okra) (FMM:Organic Techniques) could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i>	noInformation					
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

allowed values: *noInformation**allowed values:* *pimGUID*

Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature ExtractionMine (Area)New ☐ Extraction Mine**An excavation made in the terrain for the purpose of extracting and/or exploiting natural resources.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	Real	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> <i>-999999.0</i>						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> <i>-999999.0</i>						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> <i>noInformation</i>						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> <i>[-999999, -999999]</i>						
Deepest Depth Below Surface Level	1	-999999.0	REAL	metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> <i>-999999.0</i>

Extraction Mine Type	1	No Information	Enumeration	Unitless	0	The type of an extraction mine.
<i>allowed values:</i> Area Strip-mine Dredge Peatery			Below Surface No Information Placer			Borrow-pit Opencast Prospect Contour Strip-mine Other Quarry

	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	AA010	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AA010						
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
	<i>allowed values:</i> Chemical Mining No Information Solid Mineral Fuel Mining			Metal Ore Mining Other			Mineral Mining Peat Extraction Mining and Quarrying Salt Extraction
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The intended use(s) of a designated hazard protection shelter based on the kind of emergency. [Description] Hazard shelters may be located inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
	<i>allowed values:</i> Bomb Shelter Storm Shelter			Fallout Shelter			No Information Other
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						

Least Depth Below Surface Level	1	-999999.0	REAL	metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling. The least depth below surface level may be located at ground or water level and therefore have a value of zero (for example: an opencast extraction mine, a terrain depression or a lake). For depths defined with respect to a time-varying water level, consideration should be given to the use of Attribute: 'Hydrographic Depth'.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False						
<i>allowed values:</i> No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.

Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Basalt Clay Diatomaceous Earth Granite Manganese No Information Pumice Sand Stone Vanadium						
<i>allowed values:</i> Bauxite Coal Dolomite Gravel Marble Other Quartz Sandstone Tin Zinc						
<i>allowed values:</i> Chalk Copper Fluorite Iron Mica Phosphate Rock Selenium Travertine						
<i>allowed values:</i> Chromium Diamond Gold Lead Nickel Porphyry Salt Silver Uranium						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information						
<i>allowed values:</i> Other						

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Underground Mine Access	1	No Information	Enumeration	Unitless	0	The means by which an underground mine is accessed from the surface. [Description] For example, by a tunnel or a shaft.
<i>allowed values:</i> Drift Slope			No Information			Shaft Not Applicable
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
<i>allowed values:</i> Below Ground Surface			No Information			On Surface
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0

Feature ExtractionMine (Point)New ☐ Extraction Mine

An excavation made in the terrain for the purpose of extracting and/or exploiting natural resources.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	Real	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Deepest Depth Below Surface Level	1	-999999.0	REAL	metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Extraction Mine Type	1	No Information	Enumeration	Unitless	0	The type of an extraction mine.
<i>allowed values:</i> Area Strip-mine Dredge Peatery			Below Surface No Information Placer			Borrow-pit Opencast Prospect Contour Strip-mine Other Quarry
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AA010	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AA010						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.

<i>allowed values:</i> Chemical Mining No Information Solid Mineral Fuel Mining			Metal Ore Mining Other		Mineral Mining Peat Extraction		Mining and Quarrying Salt Extraction
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation							
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information				Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original				Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
	Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The intended use(s) of a designated hazard protection shelter based on the kind of emergency. [Description] Hazard shelters may be located inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
<i>allowed values:</i> Bomb Shelter Storm Shelter				Fallout Shelter		No Information	Other
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0							
	Least Depth Below Surface Level	1	-999999.0	REAL	metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling. The least depth below surface level may be located at ground or water level and therefore have a value of zero (for example: an opencast extraction mine, a terrain depression or a lake). For depths defined with respect to a time-varying water level, consideration should be given to the use of Attribute: 'Hydrographic Depth'.
<i>allowed values:</i> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0							

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Dismantled Unmaintained
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Basalt Clay Diatomaceous Earth Granite Manganese No Information Pumice Sand Stone Vanadium			Bauxite Coal Dolomite Gravel Marble Other Quartz Sandstone Tin Zinc			Chalk Chromium Copper Diamond Gold Lead Nickel Porphyry Salt Silver Uranium
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Underground Mine Access	1	No Information	Enumeration	Unitless	0	The means by which an underground mine is accessed from the surface. [Description] For example, by a tunnel or a shaft.
<i>allowed values:</i> Drift Slope			No Information			Not Applicable Shaft
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID						
Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
<i>allowed values:</i> Below Ground Surface			No Information			On Surface
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Facility (Area)

New ☐ Facility

An area that has been developed to perform a specific principal function, consisting of one or more vertical constructions (for example: structures or buildings), horizontal constructions (for example: pavements, roads, rail tracks, or bridges), and/or supporting utilities (for example: power lines, water supply, or sewerage), plus the underlying land. [Description] For example, an industrial plant consisting of building(s), shipping dock(s), storage area(s), power transformer(s), heating and/or cooling equipment, vehicle parking, roads, railroad tracks, and perimeter fences and gates.

New Feature Unique Identifier 1 noInformation StructuredText Unitless 254 When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.

allowed values: noInformation

Geographic Name Information : Full Name 3 No Information String Unitless 200 A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.

allowed values: No Information

New (Location Country) Designation : GENC Short URN-based Identifier 1 No Information CodeList Unitless 24 The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at <http://nsgreg.nga.mil/gencl>. [Hyperlink] <http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2>

Height Above Surface Level 1 -999999.0 REAL metre 0 The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.

allowed values: -999999.0

Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
-------------------	---	-----------	------	-------	---	---

allowed values: -999999.0

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
--------	---	-----------	------	-------	---	--

allowed values: -999999.0

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
-------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
---	---	----------------	--------	----------	----	--

allowed values: No Information

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
---------------------	---	----------------	---------	----------	---	---

allowed values: False

No Information

True

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.

<i>allowed values:</i>	Aluminum Chemical Copper Gold Lumber No Raw Material Paper Radioactive Material Snow Tobacco Wood	Asphalt Clay Cotton Ice Manganese Oil Petroleum and/or Natural Gas Rubber Steel Uranium Zinc	Bauxite Coal Gas Iron Metal Ore Plant Material Sewage Sugar Vegetation	Cement Coke Glass Lead No Information Other Plastic Silver Textile Water		
Religious Information : Religious Designation	1	No Information	Enumeration	Unitless	0	A designation denoting a religion or system of belief.
<i>allowed values:</i>	Buddhism Islam No Information Roman Catholic	Chaldean Judaism Orthodox Shia	Christian Mixed and/or No Designation Other Shinto	Hinduism Nestorian Protestant Sunni		
Religious Information : Religious Facility Type	1	No Information	Enumeration	Unitless	0	The type of a facility, building, structure or site that is designed and designated to be used for religious activities, based on its structure and/or the principal activity for which it was designed.
<i>allowed values:</i>	Cathedral Hermitage Monastery Other Seminary Tabernacle	Chapel Marabout Mosque Pagoda Shrine Temple	Church Minaret No Information Religious Community Stupa	Convent Mission Noviciate Retreat Synagogue		
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information	Other				
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i>	noInformation					

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Adobe Brick Fibreglass Metal Plant Material Steel			Aluminum Glass Mud-based Construction Prestressed Concrete Stone			Brick Iron Concrete Masonry Other Reinforced Concrete Sod Wood
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Wireless Telecommunication Information : Wireless Telecommunication Type	1	No Information	Enumeration	Unitless	0	The type of a wireless telecommunication service based on the mechanism(s) of transmission and/or the nature of the communication(s) supported. [Description] For example, radio broadcast or mobile phone service.
<i>allowed values:</i> Cellular Phone Other Television (TV)			Microwave Radio Relay Radio Broadcast			Mobile Phone Radio Telephone No Information Radio-telegraph

Feature Facility (Point)New ☐ Facility

An area that has been developed to perform a specific principal function, consisting of one or more vertical constructions (for example: structures or buildings), horizontal constructions (for example: pavements, roads, rail tracks, or bridges), and/or supporting utilities (for example: power lines, water supply, or sewerage), plus the underlying land. [Description] For example, an industrial plant consisting of building(s), shipping dock(s), storage area(s), power transformer(s), heating and/or cooling equipment, vehicle parking, roads, railroad tracks, and perimeter fences and gates.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Manufacturing Information : By-product	3	No Information	Enumeration	Unitless	0	The principal by-product(s) of a production, mining, or agricultural activity. [Description] If multiple by-products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Ash Other Sewage			Cinders Radioactive Material Slag			No Byproduct Refuse No Information Scrap-metal
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AL010	CONSTRAINED_STRING	Unitless	5	Feature Code

allowed values: AL010

Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.

New (Location Country) Designation : GENC Short URN-based Identifier 1 No Information CodeList Unitless 24 The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at <http://nsgreg.nga.mil/gencl>. [Hyperlink] <http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2>

Variant Transliterated

Height Above Surface Level 1 -999999.0 REAL metre 0 The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.

allowed values: -999999.0

Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
-------------------	---	-----------	------	-------	---	---

allowed values: -999999.0

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
--------	---	-----------	------	-------	---	--

allowed values: -999999.0

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
-------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
---	---	----------------	--------	----------	----	--

allowed values: No Information

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
---------------------	---	----------------	---------	----------	---	---

allowed values: False

No Information

True

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
--------------------	---	----------------	-------------	----------	---	--

allowed values: Construction
IntactDamaged
No InformationDestroyed
Unmaintained

Dismantled

Manufacturing Information : Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
-------------------------------------	---	----------------	-------------	----------	---	--

Manufacturing Information : Raw Material	3	No Information	Enumeration	Unitless	0	The principal 'raw', or input, material(s) involved in a production activity. [Description] If multiple 'raw' materials are specified then they are usually listed in descending order of importance.
--	---	----------------	-------------	----------	---	---

<i>allowed values:</i>	Aluminum Chemical Copper Gold Lumber No Raw Material Paper Radioactive Material Snow Tobacco Wood	Asphalt Clay Cotton Ice Manganese Oil Petroleum and/or Natural Gas Rubber Steel Uranium Zinc	Bauxite Coal Gas Iron Metal Ore Plant Material Sewage Sugar Vegetation	Cement Coke Glass Lead No Information Other Plastic Silver Textile Water		
Religious Information : Religious Designation	1	No Information	Enumeration	Unitless	0	A designation denoting a religion or system of belief.
<i>allowed values:</i>	Buddhism Islam No Information Roman Catholic	Chaldean Judaism Orthodox Shia	Christian Mixed and/or No Designation Other Shinto	Hinduism Nestorian Protestant Sunni		
Religious Information : Religious Facility Type	1	No Information	Enumeration	Unitless	0	The type of a facility, building, structure or site that is designed and designated to be used for religious activities, based on its structure and/or the principal activity for which it was designed.
<i>allowed values:</i>	Cathedral Hermitage Monastery Other Seminary Tabernacle	Chapel Marabout Mosque Pagoda Shrine Temple	Church Minaret No Information Religious Community Stupa	Convent Mission Noviciate Retreat Synagogue		
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information	Other				
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i>	noInformation					

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Adobe Brick Fibreglass Metal Plant Material Steel			Aluminum Glass Mud-based Construction Prestressed Concrete Stone			Brick Iron Concrete Masonry Other Reinforced Concrete Sod Wood
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Wireless Telecommunication Information : Wireless Telecommunication Type	1	No Information	Enumeration	Unitless	0	The type of a wireless telecommunication service based on the mechanism(s) of transmission and/or the nature of the communication(s) supported. [Description] For example, radio broadcast or mobile phone service.
<i>allowed values:</i> Cellular Phone Other Television (TV)			Microwave Radio Relay Radio Broadcast			Mobile Phone Radio Telephone No Information Radio-telegraph

Feature Fairground (Area) New ☐ Fairground

An area where permanent facilities exist to hold outdoor fairs, circuses or exhibitions.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AK090	CONSTRAINED_STRING	Unitless	5	Feature Code

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<u>allowed values:</u> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Feature FeatureAttMetadata (Table)New ☐ Feature Attribute Metadata

A modeling entity collecting metadata (for example: source, lineage, quality) about the digital representation of a feature attribute. [Description] For example, the currency of the information known about a feature attribute or the degree to which the attribute value is accurately and/or completely determined. Feature attributes are characteristics of features, which are representations of temporally persistent real-world phenomena.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Currency Date and Time	1	noInformation	StructuredText	Unitless	20	The date and, optionally, time assigned to a data set (for example: the digital representation of a single feature or a set of features) as a whole that provides an overall assessment of its currency. [Description] Often known as the 'as of' date, the overall currency of a data set is affected by knowledge of the source(s) and processes used to define the location, geometry, and other properties (attributes and associations) of the digital representation. [DatatypeSpecification] A structured text value specifying a date-time. [EncodingSpecification] Formatted in accordance with ISO 8601:2000, 5.4.1, Combinations of date and time of day - Complete representation - Extended format, a calendar date and time representation, as a single data element comprising up to twenty characters, where [YYYY] represents a calendar year, [MM] the ordinal number of a calendar month within the calendar year, [DD] the ordinal number of a day within the calendar month, [hh] the ordinal number of an hour within the calendar day, [mm] the ordinal number of a minute within the hour, [ss] the ordinal number of a second within the minute, and an optional 'Z' when the time is according to Coordinated Universal Time (UTC), as 'YYYY-MM-DDThh:mm:ssZ' (for example: '1985-04-12T11:45:20Z' for 11 hours, 45 minutes and 20 seconds UTC on 12 April 1985). Representations with reduced precision may be used in accordance with 5.4.2 (for example: '1985-04-12' for 12 April 1985). Representations consistently using basic format (eliminating the hyphen '-' and the colon ':') may be used in accordance with 5.4.1 (for example: '19850412T114520Z').

allowed values: noInformation

Data Quality Statement	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records a general assessment of the quality of a resource (for example: a data instance, a data set or a data processing activity). [Description] The quality of a data resource is dependent on the data providers knowledge regarding the lineage of the data and the processes that have been used to transform that data. No restriction is placed on the length of the statement.
------------------------	---	----------------	--------	----------	-------	--

allowed values: No Information

New External Links 1 noInformation StructuredText Unitless 2E+09 A list of external references such as URLs that may provide ancillary information about this feature instance.

allowed values: noInformation

New Feature Code 1 ZI027 CONSTRAINED_STRING Unitless 5 Feature Code

allowed values: ZI027

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
-------------------	---	----------------	--------	----------	-------	---

<i>allowed values:</i> No Information						
New	Property DFDD-compatible Accessor	1	noInformation	StructuredText	Unitless	14
The DFDD-compatible alphanumeric code-based accessor assigned to a model property. [Description] The accessor may include multiple components that are composed using underscore-notation in the order that they are used to access the value of the property starting from a reference entity. The composed accessor may be used in physical implementations as a 'field name' to perform operations on the property value that is stored in that 'field' where the reference entity has been implemented as a 'table'. A DFDD-compatible code is a short, unique alphanumeric value that conforms to the DGIWG-developed Feature Data Dictionary (FDD) and may be used to designate a model property for the purposes of data interchange in conformance with DGIWG standards. [DatatypeSpecification] A structured text value specifying a property DFDD accessor. [EncodingSpecification] A text string whose content is structured in accordance with the requirements of the National System for Geospatial Intelligence Application Schema (NAS) - Part 1: Platform Independent Model (NGA.STND.0022).						
<i>allowed values:</i> noInformation						
	Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254
An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature FeatureMetadata (Table)New ☐ Feature Metadata

A modeling entity collecting metadata (for example: source, lineage, quality) about the digital representation of a feature and its properties (attributes and associations).

[Description] For example, the currency of the information known about a feature or the degree to which the properties of a feature are accurately and/or completely determined.

Features are representations of temporally persistent real-world phenomena, including their geometric position and extent.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Currency Date and Time	1	noInformation	StructuredText	Unitless	20	The date and, optionally, time assigned to a data set (for example: the digital representation of a single feature or a set of features) as a whole that provides an overall assessment of its currency. [Description] Often known as the 'as of' date, the overall currency of a data set is affected by knowledge of the source(s) and processes used to define the location, geometry, and other properties (attributes and associations) of the digital representation. [DatatypeSpecification] A structured text value specifying a date-time. [EncodingSpecification] Formatted in accordance with ISO 8601:2000, 5.4.1, Combinations of date and time of day - Complete representation - Extended format, a calendar date and time representation, as a single data element comprising up to twenty characters, where [YYYY] represents a calendar year, [MM] the ordinal number of a calendar month within the calendar year, [DD] the ordinal number of a day within the calendar month, [hh] the ordinal number of an hour within the calendar day, [mm] the ordinal number of a minute within the hour, [ss] the ordinal number of a second within the minute, and an optional 'Z' when the time is according to Coordinated Universal Time (UTC), as 'YYYY-MM-DDThh:mm:ssZ' (for example: '1985-04-12T11:45:20Z' for 11 hours, 45 minutes and 20 seconds UTC on 12 April 1985). Representations with reduced precision may be used in accordance with 5.4.2 (for example: '1985-04-12' for 12 April 1985). Representations consistently using basic format (eliminating the hyphen '-' and the colon ':') may be used in accordance with 5.4.1 (for example: '19850412T114520Z').
<i>allowed values:</i> noInformation						
Data Quality Statement	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records a general assessment of the quality of a resource (for example: a data instance, a data set or a data processing activity). [Description] The quality of a data resource is dependent on the data providers knowledge regarding the lineage of the data and the processes that have been used to transform that data. No restriction is placed on the length of the statement.
<i>allowed values:</i> No Information						
Delineation Known	1	No Information	Boolean	Unitless	0	An indication that the delineation (for example: limits and information) of a feature is known.
<i>allowed values:</i> False			No Information			True

	Existence Certainty Category	1	No Information	Enumeration	Unitless	0	A general evaluation of the quality of a feature assessment, as a category.
	<i>allowed values:</i> Definite Reported			Doubtful			No Information Probable
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
New	Feature Code	1	ZI026	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> ZI026						
	Geometry (Horizontal) : Horizontal Accuracy Category	1	No Information	Enumeration	Unitless	0	A general evaluation of the horizontal accuracy of the geographic position of a feature, as a category.
	<i>allowed values:</i> Accurate Precise			Approximate			Doubtful No Information
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
New	Schema Version	1	noInformation	StructuredText	Unitless	254	Identifies the version of the schema used at the time of data collection.
	<i>allowed values:</i> noInformation						
	Survey Coverage Category	1	No Information	Enumeration	Unitless	0	A general evaluation of the coverage quality of a survey, as a category. [Description] See possibly accompanying Attribute: 'Position Quality Category' for additional survey-related information.
	<i>allowed values:</i> Inadequately Surveyed			No Information			Surveyed Unsurveyed
	Underwater Delineation Quality	1	No Information	Enumeration	Unitless	0	The delineation quality of an underwater feature that is derived from overhead imagery (for example; airborne or satellite remote sensing imagery), as a category. [Description] Water column characteristics and other environmental factors (for example: water surface roughness or sun glint) will degrade the accuracy of the delineated extent of features.
	<i>allowed values:</i> Average Delineation No Information			Excellent Delineation Poor Delineation			Good Delineation Highly Obscured Delineation
	Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
	<i>allowed values:</i> noInformation

Feature Fence (Line)

 New ☐ Fence

A man-made barrier of relatively light structure used as an enclosure or boundary. [Description] Similar structures that are constructed of heavy materials (for example: stone, rock or masonry) are classified as walls.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Barrier Top Type	1	No Information	Enumeration	Unitless	0	The type of structure and/or material mounted on the top of a barrier (for example: a fence or a wall).
<i>allowed values:</i> Barbed Wire No Information			Chain-link Other			Concertina Wire Spiked Electrified Wire
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	AL070	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL070						

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation							
	Fence Type	1	No Information	Enumeration	Unitless	0	The type of a fence based on the type of materials used in its construction.
<i>allowed values:</i> Barbed Wire Metal Wood							
Chain-link Netting							
Electrified Wire No Information							
Geotextile Other							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon ("."), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information							
Other							
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information							
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False							
No Information							
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact							
Damaged No Information							
Destroyed Unmaintained							
Dismantled							
	Predominant Feature Height	1	[-999999.0, -999999.0]	REAL_INTERVAL	Metre	0	The predominant height (the height of at least 50 percent) of the feature measured from the lowest point of the base at ground or water level (downhill side/downstream side).
<i>allowed values:</i> [-999999.0, -999999.0]							

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Brick No Information			Concrete Other			Masonry Stone Metal Wood
Thickness	1	-999999.0	REAL	metre	0	The distance between the two opposite surfaces of an object, usually the distance of smallest measure. [Description] The third dimension of an object, distinct from length and width (breadth).
<i>allowed values:</i> -999999.0						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature FerryCrossing (Line)

New ☐ Ferry Crossing

A route where a ferry crosses from one shore to another.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	Real	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> No Information			Other			Private Public
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AQ070	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AQ070						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.

<i>allowed values:</i> <i>noInformation</i>						
Ferry Crossing Distance	1	-999999.0	REAL	metre	0	The length of a route in a body of water where a ferry crosses from one shoreline to another.
<i>allowed values:</i> <i>-999999.0</i>						
Ferry Crossing Type	1	No Information	Enumeration	Unitless	0	The type of a ferry crossing based on the maneuverability of the vessel.
<i>allowed values:</i> Cable Other			Free-moving			Ice No Information
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> <i>No Information</i>						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> <i>No Information</i>			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> <i>-999999.0</i>						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> <i>No Information</i>						
Motorized Crossing	1	No Information	Boolean	Unitless	0	An indication that a ferry is propelled across a waterbody by a motor located on either the vessel or the shore.
<i>allowed values:</i> <i>False</i>			No Information			True
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> <i>No Information</i>						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> <i>False</i>			No Information			True
Operating Cycle	1	No Information	Enumeration	Unitless	0	The time(s) during which a feature is usable.
<i>allowed values:</i> Continuously Operating No Information Winter Season			Daytime Other			Never Operating Restricted Night-time Summer Season

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. <i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Route Identification <route designation>	3	No Information	String	Unitless	24	The official type(s) and/or designation(s) assigned to a route. [Description] A road network may be identified in accordance with a specified typing scheme (for example: based the nature of service that it is intended to provide) and numbering scheme (for example: composed of a prefix indicating an administrative region and then a number).
<i>allowed values:</i> No Information						
Route Identification <route designation type>	3	No Information	Enumeration	Unitless	0	The type of designation of a road network according to the nature of service that it is intended to provide, as designated by international, national and/or other administrative authorities.
<i>allowed values:</i> International No Information			Local Other			National Secondary National Motorway
New Sinuosity	1	-999999.0	Real	Metres	0	The actual path length divided by the shortest path length of a section of the road or trail allowing for estimates of speed given the curves of the roadway. [Description] This allows for routing algorithms to more precisely estimate the speed.
<i>allowed values:</i> -999999.0						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques))' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						

Speed Limit (KPH)	1	-999999.0	Real	Kilometre per Hour	0	The maximum vehicle speed legally permitted, expressed in kilometres per hour.
<i>allowed values:</i> -999999.0						
Speed Limit (MPH)	1	-999999.0	Real	Statute Mile per Hour	0	The maximum vehicle speed legally permitted, expressed in miles per hour.
<i>allowed values:</i> -999999.0						
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> No Information Road Other Pedestrian Railway						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMOwnerProducer
<i>allowed values:</i> noInformation						
Route Identification <route designation>	3	No Information	String	Unitless	24	The official type(s) and/or designation(s) assigned to a route. [Description] A road network may be identified in accordance with a specified typing scheme (for example: based the nature of service that it is intended to provide) and numbering scheme (for example: composed of a prefix indicating an administrative region and then a number).
<i>allowed values:</i> No Information						
Route Identification <route designation type>	3	No Information	Enumeration	Unitless	0	The type of designation of a road network according to the nature of service that it is intended to provide, as designated by international, national and/or other administrative authorities.
<i>allowed values:</i> International No Information			Local Other			National Secondary National Motorway
New Sinuosity	1	-999999.0	Real	Metres	0	The actual path length divided by the shortest path length of a section of the road or trail allowing for estimates of speed given the curves of the roadway. [Description] This allows for routing algorithms to more precisely estimate the speed.
<i>allowed values:</i> -999999.0						

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

Feature FerryStation (Area)

New ☐ Ferry Station

A location where a ferry takes on or discharges its load.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.

allowed values: -999999.0

Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999.0						
Attached Building	1	No Information	Boolean	Unitless	0	An indication that a building is physically contiguous (for example: shares a common wall) with one or more adjacent buildings. [Description] When a single residence is attached to a single adjacent residence it is considered to be 'semi-detached' and may be termed a 'duplex'. When a single residence is attached to two adjacent residences on opposite sides to form a row it is termed a 'terraced house' or 'row house'.
<u>allowed values:</u> False No Information True						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<u>allowed values:</u> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<u>allowed values:</u> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<u>allowed values:</u> Civilian Joint Military and Civilian Military No Information Other Private Public						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<u>allowed values:</u> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<u>allowed values:</u> No Information Non-operational Not in Operation Operational Partially Operational Planned Temporarily Non-operational						
New Feature Code	1	AQ080	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> AQ080						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<u>allowed values:</u> Customs Checkpoint Emergency Operations Inland Waters Transport Inspection Inspection Station Meeting Place No Information Other Pedestrian Transport Postal Activities Railway Transport Restroom Road Transport Station Stop Transfer Hub Water Transport						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<u>allowed values:</u> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> No Information Other						
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
