	ICAO Location Indicator	1	noInformation	StructuredText	Unitless	14	The identifier that is assigned to a location in accordance with rules prescribed by the International Civil Aviation Organization (ICAO) in Document 7910. [Description] If available this indicator shall be used as primary for identification. [DatatypeSpecification] A structured text value specifying an ICAO location indicator. [EncodingSpecification] The 2 letter ICAO code of the State being responsible for the aerodrome in accordance with ICAO Doc7910, followed by either a two-digit integer between 01 and 99 or characters in the range A-Z.
	<i>allowed values:</i> noInformation						
	Installation Operator	1	No Information	String	Unitless	2E+09	The name of the company or authority operating an installation.
	<i>allowed values:</i> No Information						
New	Largest Aircraft	1	No Information	String	Unitless	254	The largest aircraft that has used the facility within the past five years.
	<i>allowed values:</i> No Information						

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Magnetic Variation	1	-999999.0	Real	Arc Degree	0	The angular difference between True North and Magnetic North measured at a given position and date. [Description] The value given indicates whether the angular difference is East (positive) or West (negative) of True North. True North is the direction of the northern point at which the geographic meridian lines meet.
<i>allowed values:</i> -999999.0						
Magnetic Variation Information : Magnetic Variation Date	1	noInformation	StructuredText	Unitless	20	The date on which the magnetic variation was measured. [Structure] MMDDYYYY
<i>allowed values:</i> noInformation						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Dismantled Unmaintained
Port of Entry	1	No Information	Boolean	Unitless	0	An indication that a facility is a port of entry for customs and immigration purposes.
<i>allowed values:</i> False			No Information			True
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumlSMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumlSMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non- intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumlSMNonIC
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature LandingZone (Area)

New ☒ Landing Zone

An identified area for aircraft landing or the pick-up or drop-off of troops, equipment or supplies. [Description] This is usually an established site, and it is not to be used for features typically classified as runways, helipads, heliports or aerodromes. Varied types of aircraft may use this landing zone.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).

New	Feature Code	1	STB23	CONSTRAINED_STRING	Unitless	5	Feature Code
	<u>allowed values:</u> STB23						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<u>allowed values:</u> noInformation						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

Feature LandParcel (Area)

New ☐ Land Parcel

A tract of land that is defined in location and extent according to legally or customarily recognized methods (for example: social tenure). [Description] Improvements (for example: buildings, fences, and wells) to the tract of land are distinct from the land itself and thus may have different associated rights and/or restrictions than those of the underlying tract of land. Social tenure (also called customary tenure) is the allocation and security of rights in land based on customs and social authority, rather than on a formal legal system of land registration. In some areas of the world, social tenure is the basis for informal land administration. Some legal land administration systems recognize and/or incorporate social tenure-based rights. An example of recognition without incorporation is social tenure 'shells', in which areas are set aside where social tenure is the recognized authority for land rights. In other cases, individual social tenure-based rights may be registered within the legal system.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Cadastral Source Identifier	1	No Information	String	Unitless	2E+09	The unique identifier of a land parcel as assigned by a land survey or data production system.
<i>allowed values:</i> No Information						
New Cadastral Source Identifier Type	1	No Information	String	Unitless	2E+09	The name, description, Uniform Resource Locator (URL) and/or other information sufficient to unambiguously identify the land survey or data production system that assigned a cadastral source identifier to a land parcel.

allowed values: No Information

New	Cadastral Source Measurement	1	No Information	String	Unitless	2E+09	A description of the observations and/or physical measurements taken to describe the location and extent of a unit of land (or water) for purposes of administration. [Description] Observations may include lot numbers, as well as detailed location of survey markers used, boundary lengths, and other readily identifiable characteristics of the land (or water) unit.
	<i>allowed values:</i> No Information						
New	Cadastral Source Type	1	No Information	Enumeration	Unitless	0	The type of resource that describes the location and extent of a unit of land (or water), typically for purposes of administration such as taxation or land rights transfer. [Description] For example: a field survey sketch, an orthophoto, or a satellite image marked with evidence on the location of boundaries collected from the field. Note that a cadastral source may describe a land parcel using official survey data or by a less formal method such as a tenure map.
	<i>allowed values:</i> Collateral Evidence No Information Plat Tenure Map			Field Notes Official Cadastral Survey Relative Measurement Topographic Map		Field Sketch Orthophoto Resurvey Use Plat	GNSS Survey Other Survey Video
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private		Military Public	No Information
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
New	Feature Code	1	IA040	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> IA040						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a generic part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<i>allowed values:</i> Dry Perennial			Ephemeral		Intermittent	No Information
	Inundation Type	1	No Information	Enumeration	Unitless	0	The type of an inundation based on the cause of the flooding.
	<i>allowed values:</i> Controlled			Natural		No Information	
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature LandWaterBoundary (Line)

New ☐ Land Water Boundary

The line where a land mass is in contact with a body of water and the tide state or river stage are unspecified. [Description] It may be in either the littoral or inland waters. In the littoral, consideration should be given to using the more specific high water or low water lines based on the nature of the source data collection.

	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<u>allowed values:</u> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMCClassificationAll
	<u>allowed values:</u> U						

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Asphalt No Information			Concrete Other			Iron Steel Metal Wood
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	GB040	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> GB040						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information						
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> <div>Conventional</div> <div>Native Transliterated</div> <div>Unverified Original</div> <div>Historical Original</div> <div>No Information</div> <div>Unverified Transliterated</div> <div>Historical Transliterated</div> <div>Other</div> <div>Variant Original</div> <div>Native Original</div> <div>Provisional</div> <div>Variant Transliterated</div>						
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Maritime Navigation Light : Light Characteristic Number	1	-999999	Integer	Unitless	0	The number of flashes/occultations in a group flashing/occulting light character.
<i>allowed values:</i> -999999						
Maritime Navigation Marked	1	No Information	Boolean	Unitless	0	An indication that a feature is significant to maritime safety of navigation and is marked (for example: by a light or beacon) by a maritime-specific navigational aid. [Description] Mariners may also use other prominent features (for example: rotating aeronautical beacons or lighted structures) for informal navigational purposes.
<i>allowed values:</i> <div>False</div> <div>No Information</div> <div>True</div>						

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Maritime Navigation Light : Period of Light	1	-999999.0	Real	Second	0	The time occupied by an entire cycle of intervals of light and eclipse.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.

<i>allowed values:</i> Conical Other			Domed Pitched			Flat Pyramidal	No Information
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.	
<i>allowed values:</i> noInformation							
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).	
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID							
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).	
<i>allowed values:</i> Brick Masonry Prestressed Concrete			Concrete Metal Reinforced Concrete			Glass No Information Steel	Iron Other Stone
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.	
<i>allowed values:</i> noInformation							
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Lighthouse (Point)New ☐ Lighthouse**A distinctive structure on or off a coast exhibiting a major light designed to serve as an aid to navigation.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.

<u>allowed values:</u> No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<u>allowed values:</u> <i>False</i> No Information <i>True</i>						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<u>allowed values:</u> <i>-999999.0</i>						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<u>allowed values:</u> <i>-999999.0</i>						
Attached Building	1	No Information	Boolean	Unitless	0	An indication that a building is physically contiguous (for example: shares a common wall) with one or more adjacent buildings. [Description] When a single residence is attached to a single adjacent residence it is considered to be 'semi-detached' and may be termed a 'duplex'. When a single residence is attached to two adjacent residences on opposite sides to form a row it is termed a 'terraced house' or 'row house'.
<u>allowed values:</u> <i>False</i> No Information <i>True</i>						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<u>allowed values:</u> <i>noInformation</i>						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<u>allowed values:</u> <i>[-999999, -999999]</i>						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<u>allowed values:</u> Civilian Joint Military and Civilian Military No Information Other Private Public						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<u>allowed values:</u> <i>noInformation</i>						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<u>allowed values:</u> No Information Non-operational Not in Operation Operational Partially Operational Planned Temporarily Non-operational						
New Feature Code	1	BC050	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> <i>BC050</i>						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<u>allowed values:</u> Emergency Shelter Hobbies and/or Leisure Activities Inland Waters Transport Maritime Pilotage Museum No Information Other Pilot Station Rescue and Paramedical Services Signalling Water Transport						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<u>allowed values:</u> <i>noInformation</i>						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

	<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Maritime Navigation Light : Light Characteristic Number	1	-999999	Integer	Unitless	0	The number of flashes/occultations in a group flashing/occulting light character.
	<u>allowed values:</u> -999999						
	Maritime Navigation Marked	1	No Information	Boolean	Unitless	0	An indication that a feature is significant to maritime safety of navigation and is marked (for example: by a light or beacon) by a maritime-specific navigational aid. [Description] Mariners may also use other prominent features (for example: rotating aeronautical beacons or lighted structures) for informal navigational purposes.

	<u>allowed values:</u> -999999.0						

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMNonIC
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMOwnerProducer
<i>allowed values:</i>	noInformation					
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i>	Conical Other		Domed Pitched			Flat Pyramidal No Information
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i>	noInformation					

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Brick Masonry Prestressed Concrete						
Concrete Metal Reinforced Concrete						
Glass No Information Steel						
Iron Other Stone						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature LightSector (Point)

New ☐ Light Sector

A sector defined by bearings from seaward within which a light shows a specified character or color, or is obscured.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Character of Light	1	noInformation	StructuredText	Unitless	254	The characteristic description of a maritime light or lights at one geographic position that includes its class, number and color(s) of flashes or occultations. [Description] This text is structured as it traditionally has been represented on a paper chart. [Structure] For example: 'Q(6)+L F1, VQ G, L F1 (3+2)WR'.
<i>allowed values:</i> noInformation						

	Maritime Navigation Light : Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military No Information
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
New	Feature Code	1	BC060	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BC060						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Maritime Navigation Light : Highest Elevation	1	-999999.0	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						
	Light Sector Angle	1	-999999	Integer	Arc Degree	0	The horizontal angular width of a light sector to which the visibility of a light is limited. [Description] The limits of light sectors (arcs of visibility) are arranged clockwise and are given from seaward toward the central object.
	<i>allowed values:</i> -999999						
	Light Sector Initial Limit	1	-999999	Integer	Arc Degree	0	The initial angular limit of visibility of a light sector expressed as a bearing from seaward to the central object. [Description] The order of sector initial limit and sector terminal limit is clockwise around the central object. The bearing direction conforms with the method used in 'List of Lights' publications.
	<i>allowed values:</i> -999999						
	Light Sector Terminal Limit	1	-999999	Integer	Arc Degree	0	The terminal angular limit of visibility of a light sector expressed as a bearing from seaward to the central object. [Description] The order of sector initial limit and sector terminal limit is clockwise around the central object. The bearing direction conforms with the method used in 'List of Lights' publications.
	<i>allowed values:</i> -999999						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Nominal Range	1	-999999	Integer	Nautical Mile	0	The maximum distance at which a light can be seen (or signal detected) in a homogeneous atmosphere in which the meteorological visibility is 10 nautical miles (clear weather as defined by the International Visibility Code). [Description] The actual luminous range will be lesser (or occasionally greater) than the nominal range depending on prevailing weather conditions. The lesser of the geographic range and the luminous range is the range at which a light will first be sighted.
	<i>allowed values:</i> -999999						
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll

allowed values: U

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOSINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
---	---	----------------	----------	----------	----	--

allowed values: noInformation

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

Feature LightSupportStructure (Point)

New ☐ Light Support Structure

A structure serving as a support for one or more lights. [Description] For example, a light standard or a lamp post.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	AL110	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL110						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> No Information Sports, Amusement and Recreation			Other Transport			Railway Transport Road Transport
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated

Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information		True	
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information		Destroyed Unmaintained	Dismantled
Pylon Configuration	1	No Information	Enumeration	Unitless	0	The configuration of a pylon or pole.
<i>allowed values:</i> 'A' Other			'H' 'T'		'I' 'Y'	No Information
Pylon Material	1	No Information	Enumeration	Unitless	0	The primary type of material composing a pylon. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Aluminum Masonry Steel			Concrete Metal Wood		Fibreglass No Information	Iron Other
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. <i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Tower Shape	1	No Information	Enumeration	Unitless	0	The general shape and/or structure of a tower.
<i>allowed values:</i> Mast Truss			No Information Tubular			Other Pole
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0

Feature LightVessel (Point)New ☐ Light Vessel

A distinctively marked vessel anchored or moored at a charted point, to serve as an aid to navigation. [Description] By night, it displays a characteristic light(s) and is usually equipped with other devices (for example: a fog signal, a submarine sound signal, and/or a radio-beacon) to assist navigation.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999.0	Real	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Maritime Radiobeacon : Broadcast Frequency	2	-999999	Integer	Hertz	0	The transmission frequency of a radio communications device (for example: a television station or a radiobeacon).
<i>allowed values:</i> -999999						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Maritime Navigation Light : Character of Light	1	noInformation	StructuredText	Unitless	254	The characteristic description of a maritime light or lights at one geographic position that includes its class, number and color(s) of flashes or occultations. [Description] This text is structured as it traditionally has been represented on a paper chart. [Structure] For example: 'Q(6)+L F1, VQ G, L F1 (3+2)WR'.
<i>allowed values:</i> noInformation						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> No Information			Other			Private Public
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BC070	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BC070						

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Fog Signal : Fog Signal Type	1	No Information	Enumeration	Unitless	0	The type of a fog signal based on its signal characteristics and method of generation.
	<i>allowed values:</i> Bell Horn Other Submarine Bell			Diaphone Nautophone Radio Tyfon		Explosive No Information Reed Whistle	Gong None Siren
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Maritime Navigation Light : Light Elevation	1	-999999.0	Real	Metre	0	The height of a light measured from a specified datum (for example: vertical or sounding), usually high water, as defined by the National agency. [Description] When used with a buoy the elevation is measured from the water surface; when used with a lighthouse the elevation is typically measured from ground level.
	<i>allowed values:</i> -999999.0						
	Maritime Radiobeacon : Maritime Radiobeacon Type	3	No Information	Enumeration	Unitless	0	The type of an electronic aid to maritime navigation consisting of a radio transmitter that broadcasts distinctive and/or characteristic signals. [Description] For example, a directional radio beacon or a radar marker (RAMARK).

allowed values:	Automated Identification System (AIS) No Information Radar Responder Beacon (RACON)		Circular Radiobeacon Other Radio Direction Finding Station		Directional Radiobeacon QTG Station Rotating Pattern Radiobeacon		Long Range Air Navigation System (LORAN) C Radar Marker (RAMARK)
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
allowed values:	No Information						
Maritime Navigation Light : Multiple Light Ranges	1	noInformation	StructuredText	Unitless	254	A set of two numbers for light ranges of visibility (at a light) expressed in nautical miles. [Structure] The numbers are separated by a slash (/) if only two visibilities exist, or by a dash ('-') separating the greatest and least visibilities if three or more exist.	
allowed values:	noInformation						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
allowed values:	No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.	
allowed values:	False		No Information			True	
Maritime Navigation Light : Nominal Range	1	-999999	Integer	Nautical Mile	0	The maximum distance at which a light can be seen (or signal detected) in a homogeneous atmosphere in which the meteorological visibility is 10 nautical miles (clear weather as defined by the International Visibility Code). [Description] The actual luminous range will be lesser (or occasionally greater) than the nominal range depending on prevailing weather conditions. The lesser of the geographic range and the luminous range is the range at which a light will first be sighted.	
allowed values:	-999999						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.	
allowed values:	Construction Intact		Damaged No Information			Destroyed Unmaintained	Dismantled
Radar Reflector Present	1	No Information	Boolean	Unitless	0	An indication that an object has an associated radar reflector.	
allowed values:	False		No Information			True	
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll	
allowed values:	U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode	
allowed values:	No Information		Other				
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem	
allowed values:	noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC	

allowed values: *noInformation*

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
---	---	---------------	----------------	----------	-----	---

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

allowed values: pimGUID

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> No Information							
	Magnetic Variation Anomaly	1	[-999999.0, -999999.0]	Real_Interval	Arc Degree	0	The difference between the magnetic variation within a magnetic disturbance area and the magnetic variation of the surrounding area. [Description] It is measured east (positive value) or west (negative value) consistent with the directionality of the magnetic declination in general.
<u>allowed values:</u> [-999999.0, -999999.0]							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). No Information

	Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
	<i>allowed values:</i> -999999.0						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	BI030	CONSTRAINED_ STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BI030						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						
	Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
	<i>allowed values:</i> -999999.0						

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Maximum Design Water Depth	1	-999999.0	Real	Metre	0	The maximum depth of water that the object was designed to hold.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False						
<i>allowed values:</i> No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact						
<i>allowed values:</i> Damaged No Information						
<i>allowed values:</i> Destroyed Unmaintained						
<i>allowed values:</i> Dismantled						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information						
<i>allowed values:</i> Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumlSMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Brick Other Steel			Concrete Prestressed Concrete Stone			Masonry Reinforced Concrete Treated Timber
						No Information Soil Wood
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Usable Length	1	-999999.0	REAL	metre	0	The interior length of a structure (for example: an aircraft bunker or a lock). [Description] The length is taken along the primary alignment of the structure. If the structure is irregular in shape the length is along its greatest horizontal dimension, else if the structure is regular in shape then a shape-specific rule may apply: for a rectangular structure, the length of the longer axis; for a round structure, the diameter.
<i>allowed values:</i> -999999.0						
Usable Width	1	-999999.0	REAL	metre	0	The interior width of a structure. [Description] For example, an aircraft bunker or a lock.
<i>allowed values:</i> -999999.0						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0

Feature Lock (Line)New ☐ Lock

An enclosure with a pair or series of gates used for raising or lowering vessels as they pass from one water level to another.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	Real	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BI030	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BI030						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original
						Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Maximum Design Water Depth	1	-999999.0	Real	Metre	0	The maximum depth of water that the object was designed to hold.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i>	noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed (' ' and ') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i>	noInformation

The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						

Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Maximum Design Water Depth	1	-999999.0	Real	Metre	0	The maximum depth of water that the object was designed to hold.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False						
			No Information		True	
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact						
			Damaged No Information		Destroyed Unmaintained	
					Dismantled	
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information						
			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumlSMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Brick Other Steel			Concrete Prestressed Concrete Stone			Masonry Reinforced Concrete Treated Timber No Information Soil Wood
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID						
Usable Length	1	-999999.0	REAL	metre	0	The interior length of a structure (for example: an aircraft bunker or a lock). [Description] The length is taken along the primary alignment of the structure. If the structure is irregular in shape the length is along its greatest horizontal dimension, else if the structure is regular in shape then a shape-specific rule may apply: for a rectangular structure, the length of the longer axis; for a round structure, the diameter.
<i>allowed values:</i> -999999.0						
Usable Width	1	-999999.0	REAL	metre	0	The interior width of a structure. [Description] For example, an aircraft bunker or a lock.
<i>allowed values:</i> -999999.0						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature LoggingSite (Area)

New ☐ Logging Site

A tract of vegetation that is being exploited for lumber resources.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	EE010	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> EE010						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

[Description] No restriction is placed on its length.
<i>allowed values:</i> <i>No Information</i>						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> <i>No Information</i>						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> <i>False</i> <i>No Information</i> <i>True</i>						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> <div> <div>Construction</div> <div>Intact</div> </div> <div> <div>Damaged</div> <div>No Information</div> </div> <div> <div>Destroyed</div> <div>Unmaintained</div> </div> <div> <div>Dismantled</div> </div>						

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature ManorHouse (Area)New ☐ Manor House

A large and imposing house with many rooms, and often of architectural significance, which is located on a large rural estate. [Description] The term 'Manor House' covers a range of buildings from relatively modest rectories up to the largest and grandest country houses termed 'stately homes'. Titular names of manor houses frequently carry a suffix such as 'House', 'Manor(s)', 'Tower(s)', 'Hall', 'Park', 'Grange', 'Court', or 'Palace'. Historically, manor houses were residences for the landed gentry or the very wealthy. Although this still applicable today, many are used for different functions such as museums, hotels, amusement, hospitals, religious activities, and schools. A lack of fortification features distinguishes a manor house from a castle. The estate surrounding a manor house is typically at least several square kilometres in extent, often with a garden in the immediate vicinity of the house and a larger park beyond for aesthetic, recreational, and/or agricultural purposes.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition

	<u>allowed values:</u> No Information			Other			
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information			True
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<u>allowed values:</u> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i> Conical No Information Pyramidal			Domed Other Sawtoothed			Flat Pitched Semi-cylindrical Flat with Clerestory Pitched with Clerestory With Clerestory
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> No Information			noInformation			
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation

Feature ManorHouse (Point)New ☐ Manor House

A large and imposing house with many rooms, and often of architectural significance, which is located on a large rural estate. [Description] The term 'Manor House' covers a range of buildings from relatively modest rectories up to the largest and grandest country houses termed 'stately homes'. Titular names of manor houses frequently carry a suffix such as 'House', 'Manor(s)', 'Tower(s)', 'Hall', 'Park', 'Grange', 'Court', or 'Palace'. Historically, manor houses were residences for the landed gentry or the very wealthy. Although this still applicable today, many are used for different functions such as museums, hotels, amusement, hospitals, religious activities, and schools. A lack of fortification features distinguishes a manor house from a castle. The estate surrounding a manor house is typically at least several square kilometres in extent, often with a garden in the immediate vicinity of the house and a larger park beyond for aesthetic, recreational, and/or agricultural purposes.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<u>allowed values:</u> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<u>allowed values:</u> <i>-999999.0</i>						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<u>allowed values:</u> <i>-999999.0</i>						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<u>allowed values:</u> <i>noInformation</i>						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<u>allowed values:</u> <i>[-999999, -999999]</i>						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<u>allowed values:</u> Civilian Other			Joint Military and Civilian Private			Military Public No Information

New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Planned			Non-operational Temporarily Non-operational			Operational Partially Operational
New	Feature Code	1	AL371	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AL371						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Floor Count	1	-999999	Integer	unitless	0	The number of floors in a structure (for example: a building).
	<i>allowed values:</i> -999999						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.

Feature ManufacturedHomePark (Area)New ☐ Manufactured Home Park

A site for the semi-permanent parking of manufactured homes used as dwellings and designed without a permanent foundation. [Description] Manufactured homes are prefabricated homes built in factories, rather than on-site, and then taken to the place where they will be occupied. They are usually transported by tractor-trailers over public roads to sites which are often in rural areas or high-density developments. While these houses are usually placed in one location and left there permanently, they do retain the ability to be moved as this is a requirement in many areas. Behind the cosmetic work fitted at installation to hide the base, there are strong trailer frames, axles, wheels and tow-hitches.

	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	AI021	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AI021						
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
	<i>allowed values:</i> Convenience Store No Information Religious Activities			Food Service Other Residence			Grocery Petrol Sale Restaurant Laundry Recreation Restroom
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						

Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<u>allowed values:</u> Construction Intact						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<u>allowed values:</u> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<u>allowed values:</u> No Information						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<u>allowed values:</u> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<u>allowed values:</u> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer

allowed values: noInformation

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

allowed values: noInformation

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature MaricultureSite (Area)

New ☐ Mariculture Site

A site where marine organisms are cultivated for food and other products in either the open ocean, in an enclosed section of the ocean, or in tanks, ponds or raceways that are filled with seawater (for example: the farming of marine fish, prawns, or oysters in saltwater ponds).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aquaculture Facility Type	1	No Information	Enumeration	Unitless	0	The type, purpose, or intended role served by an aquaculture facility.

<i>allowed values:</i> Kelp Farm Shrimp Farm			Marine Culture		No Information	Sea Ranch
Area	1	-999999.0	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Conspicuous Air Category	1	No Information	Enumeration	Unitless	0	The manner in which an object is conspicuous when viewed from the air. [Description] A conspicuous feature is easily detected and identified under varying conditions (for example: lighting). Factors affecting conspicuousness include size, shape, and/or height.
<i>allowed values:</i> No Information			Not Conspicuous			Visual
Conspicuous Ground Category	1	No Information	Enumeration	Unitless	0	The manner in which an object is conspicuous when viewed from on the ground. [Description] A conspicuous feature is easily detected and identified under varying conditions (for example: lighting). Factors affecting conspicuousness include size, shape, and/or height.
<i>allowed values:</i> No Information			Not Conspicuous			Visual
Conspicuous Sea Category	1	No Information	Enumeration	Unitless	0	The manner in which an object is conspicuous when viewed from the sea. [Description] A conspicuous feature is easily detected and identified under varying conditions (for example: lighting). Factors affecting conspicuousness include size, shape, and/or height.
<i>allowed values:</i> No Information			Not Conspicuous			Visual
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational

Feature MaritimeCautionArea (Area)

New ☐ Maritime Caution Area

Generally, an area where the mariner has to be made aware of circumstances influencing the safety of navigation. [Description] The caution may represent a specific danger, a general risk, or a rule and/or navigation advice that is not directly related to a specific object. Appropriate consideration should be given, for example, to the specific identification of wrecks, hazardous rocks and wells.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Cable Type	1	No Information	Enumeration	Unitless	0	The type of a cable based on its use.
<i>allowed values:</i> Communication Line Other			Digital Communication Line Power Distribution Line			Fibre-optic Telegraph No Information Telephone
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Coastal Work Type	3	No Information	Enumeration	Unitless	0	The type of a shore or near-shore work(s) in progress.
<i>allowed values:</i> Construction of Structures Land Reclamation						No Information Other
Description of Aids to Navigation	1	No Information	String	Unitless	2E+09	Textual description of aids to navigation marking a feature. [Description] For example, 'marked by buoys'.
<i>allowed values:</i> No Information						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	FC037	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> FC037						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.

<i>allowed values:</i>	Conventional	Historical Original	Historical Transliterated	Native Original		
	Native Transliterated	No Information	Other	Provisional		
	Unverified Original	Unverified Transliterated	Variant Original	Variant Transliterated		
Length	1	-999999.0	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i>	-999999.0					
Limit(s) Physically Based	1	No Information	Boolean	Unitless	0	An indication that the limit(s) of a maritime area are based on permanent physical features.
<i>allowed values:</i>	False					
Maritime Area Restriction	3	No Information	Enumeration	Unitless	0	The type of maritime restriction(s) in an area that are designated by an appropriate authority. [Description] May be in accordance with certain specified conditions. The official legal statue of each kind of restricted area defines the kind of restriction(s).
<i>allowed values:</i>	Bird Sanctuary Continental Shelf Area Exclusive Economic Zone Fishery Zone Game Preserve International Council for the Seas (ICES) Fishery Zone Maritime Pollution (MARPOL) Reporting Area No Information Reclamation Area Swimming Area Unilateral Fishing Zone	Compass Adjustment Degaussing Range Extended Continental Shelf Area Fishing Ground Historic Wreck Area Joint Economic Development Zone Mine Danger Area No Wake Area Research Area Swinging Area Unrestricted Area	Conservation and Management Zone Dredging Area Fairway Foreign Fishing Rights Zone Incineration Area Marine Nature Reserve Natural Gas Field Other Seal Sanctuary Territorial Sea Area Waiting Area	Contiguous Zone Ecological Reserve Fish Sanctuary Former Mine Danger Area Internal Waters Maritime Mass Grave Nature Reserve Petroleum Field Stranding Danger Area Traffic Services Limit Water Skiing Area		
Maritime Caution Type	3	No Information	Enumeration	Unitless	0	The type(s) of circumstance(s) influencing the safety of navigation that mariners should observe in an area.
<i>allowed values:</i>	Cargo Transshipment Ice Advisory Outfall Area Submarine Sewer	Clearing Line Intake Area Pollution Zone Unexploded Ordnance	COLREGS Demarcation Line No Information Submarine Cable Works in Progress Area	Harbour Area Other Submarine Pipeline		
Maritime Navigation Marked	1	No Information	Boolean	Unitless	0	An indication that a feature is significant to maritime safety of navigation and is marked (for example: by a light or beacon) by a maritime-specific navigational aid. [Description] Mariners may also use other prominent features (for example: rotating aeronautical beacons or lighted structures) for informal navigational purposes.
<i>allowed values:</i>	False					
Maritime Navigation Restriction	3	No Information	Enumeration	Unitless	0	The type of maritime navigation restriction(s) in an area that are designated by an appropriate authority. [Description] May be in accordance with certain specified conditions. The official legal statue of each kind of restricted area defines the kind of restriction(s).
<i>allowed values:</i>	Anchoring Prohibited Cargo Transshipment Prohibited Diving Prohibited Dredging Restricted Entry Restricted Fishing Restricted No Information Shipping Prohibited	Anchoring Restricted Construction Prohibited Diving Restricted Drilling Prohibited Exploration and/or Development Prohibited Landing Prohibited Offshore Safety Zone Stopping Prohibited	Artifact Removal Prohibited Discharging Prohibited Dragging Prohibited Drilling Restricted Exploration and/or Development Restricted Limited Speed Area Other Trawling Prohibited	Avoidance Area Discharging Restricted Dredging Prohibited Entry Prohibited Fishing Prohibited Navigational Aid Safety Zone Reduced Wake Area Trawling Restricted		
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i>	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i>	No Information					

Operating Cycle	1	No Information	Enumeration	Unitless	0	The time(s) during which a feature is usable.
<i>allowed values:</i> Continuously Operating Other			Daytime Summer Season			Night-time Winter Season No Information
Operating Restriction	3	No Information	Enumeration	Unitless	0	The conditions (for example: time or weather) during which the use of a feature (for example: a facility, an aerodrome, a port, or a thoroughfare) is restricted.
<i>allowed values:</i> Flooding Other Time			Icing Reduced Visibility Wind			No Information Snow No Restriction Special Restriction
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

allowed values: pimGUID

Width	1	-999999.0	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
-----------	-------------	---------	-----------	-------	--------	----------------------

	Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
	<i>allowed values:</i> noInformation						
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
	Maritime Navigation Light : Character of Light	1	noInformation	StructuredText	Unitless	254	The characteristic description of a maritime light or lights at one geographic position that includes its class, number and color(s) of flashes or occultations. [Description] This text is structured as it traditionally has been represented on a paper chart. [Structure] For example: 'Q(6)+L F1, VQ G, L F1 (3+2)WR'.
	<i>allowed values:</i> noInformation						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned		Not in Operation Temporarily Non-operational	Operational
New	Feature Code	1	BC010	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BC010						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Fog Signal : Fog Signal Type	1	No Information	Enumeration	Unitless	0	The type of a fog signal based on its signal characteristics and method of generation.
	<i>allowed values:</i> Bell Horn Other			Diaphone No Information Reed		Explosive None Siren	Gong Not Applicable Whistle
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Maritime Navigation Light : Multiple Light Ranges	1	noInformation	StructuredText	Unitless	254	A set of two numbers for light ranges of visibility (at a light) expressed in nautical miles. [Structure] The numbers are separated by a slash (/) if only two visibilities exist, or by a dash ('-') separating the greatest and least visibilities if three or more exist.

<i>allowed values:</i> <i>noInformation</i>						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> <i>No Information</i>						
Navigation Mark Colour	3	No Information	Enumeration	Unitless	0	The colour(s) of a International Association of Lighthouse Authorities (IALA) navigation mark. [Description] When the navigation mark is patterned, the Attribute: 'Colour Pattern' may be used to identify the pattern and a corresponding list of colours specified.
<i>allowed values:</i> Black Grey Red			Blue <i>No Information</i> Violet			Brown Orange White Green Other Yellow
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged <i>No Information</i>			Destroyed Unmaintained Dismantled
Radar Reflector Present	1	No Information	Boolean	Unitless	0	An indication that an object has an associated radar reflector.
<i>allowed values:</i> <i>False</i>			<i>No Information</i>			<i>True</i>
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> <i>U</i>						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> <i>No Information</i>			<i>Other</i>			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> <i>noInformation</i>						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> <i>noInformation</i>						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> <i>noInformation</i>						

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

X-shaped

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

Feature MaritimeNavigationMarker (Point)

New ☐ Maritime Navigation Marker

A coloured (usually white) mark on a vertical surface (for example: a cliff, a rocky outcrop, and/or a wall) that is a conspicuous landmark for maritime navigation.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).

allowed values: noInformation

New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
---	---	--------------------	------------------	----------	---	--

allowed values: [-999999, -999999]

New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<u>allowed values:</u> <i>noInformation</i>						
New	Feature Code	1	BC055	CONSTRAINED_STRING	Unitless	5	Feature Code
	<u>allowed values:</u> <i>BC055</i>						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<u>allowed values:</u> <i>noInformation</i>						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> <i>No Information</i>						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencl . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original <i>No Information</i> Unverified Transliterated		Historical Transliterated <i>Other</i> Variant Original	Native Original Provisional Variant Transliterated
	Length	1	-999999.0	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> <i>-999999.0</i>						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> <i>No Information</i>						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> <i>No Information</i>						
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<u>allowed values:</u> Construction Intact			Damaged <i>No Information</i>		Destroyed Unmaintained	Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Metal Wood			No Information			Other Plastic
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature MaritimeNavLightSupport (Point)New ☐ **Maritime Navigation Light Support**

An otherwise unspecified fixed structure which supports a Maritime Navigation Light. [Description] May also be used to support other aids to maritime navigation (for example: maritime radiobeacons or fog signals).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	Real	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Maritime Radiobeacon : Broadcast Frequency	2	-999999	Integer	Hertz	0	The transmission frequency of a radio communications device (for example: a television station or a radiobeacon).
<i>allowed values:</i> -999999						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Maritime Navigation Light : Character of Light	1	noInformation	StructuredText	Unitless	254	The characteristic description of a maritime light or lights at one geographic position that includes its class, number and color(s) of flashes or occultations. [Description] This text is structured as it traditionally has been represented on a paper chart. [Structure] For example: 'Q(6)+L F1, VQ G, L F1 (3+2)WR'.
<i>allowed values:</i> noInformation						
Colour of Navigation Mark Description	1	No Information	String	Unitless	2E+09	A description of any unique aspects of the colouring of a navigation mark. [Description] Used to expand on the use of Attribute: 'Navigation Mark Colour', especially when the required value is not one of the standard Navigation Mark Colour values.
<i>allowed values:</i> No Information						
Colour Pattern	1	No Information	Enumeration	Unitless	0	The colour pattern(s) of an aid to navigation (for example: a buoy, a beacon, and/or a navigation light) or other feature of importance to maritime navigation. [Description] The Attribute: 'Navigation Mark Colour' may be used to specify the colours in the order in which they appear in the pattern.
<i>allowed values:</i> Border Stripe Single Color			Diagonal Stripes Squared			Horizontal Stripes Stripes No Information Vertical Stripes
Conspicuous Sea Category	1	No Information	Enumeration	Unitless	0	The manner in which an object is conspicuous when viewed from the sea. [Description] A conspicuous feature is easily detected and identified under varying conditions (for example: lighting). Factors affecting conspicuousness include size, shape, and/or height.
<i>allowed values:</i> No Information Visual and Radar			Not Conspicuous			Radar Visual
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information

	Daymark Shape	1	No Information	Enumeration	Unitless	0	The distinctive shape of a daymark. [Description] A daymark is a maritime beacon consisting of an unlighted panel of adequate viewing area to be seen at the required distance and having a distinctive shape, colour and/or number that serve to facilitate its recognition against a daylight viewing background.
	<i>allowed values:</i> Cage Rectangle			Circular Square			Diamond Trapezoidal No Information Triangle
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Planned			Non-operational Temporarily Non-operational			Operational Partially Operational
New	Feature Code	1	BC041	CONSTRAINED_ STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BC041						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Floodlit	1	No Information	Boolean	Unitless	0	An indication that a structure is floodlit.
	<i>allowed values:</i> False			No Information			True
	Fog Signal : Fog Signal Type	1	No Information	Enumeration	Unitless	0	The type of a fog signal based on its signal characteristics and method of generation.
	<i>allowed values:</i> Bell Horn Other			Diaphone No Information Reed			Explosive None Siren Gong Not Applicable Whistle
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Guyed	1	No Information	Boolean	Unitless	0	An indication that an object is guided, secured, or steadied by guy wires.
	<i>allowed values:</i> False			No Information			True
	Height Above Surface Level	1	-999999.0	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						
	Hydrographic NAVAID System	1	No Information	Enumeration	Unitless	0	The marking and numbering system followed by a hydrographic aid to navigation.
	<i>allowed values:</i> IALA Region A SIGNI			IALA Region B US Intracoastal Waterway			No Information US Uniform State No System US Western Rivers
	IALA A or B Adopted	1	No Information	Boolean	Unitless	0	An indication that an International Association of Marine Aids to Navigation and Lighthouse Authorities (IALA) bouyage system has been adopted by the national authority.

<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
IMO Adopted	1	No Information	Boolean	Unitless	0	An indication that a Traffic Separation Scheme (TSS) has been adopted by the International Maritime Organization (IMO).
<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
Length	1	-999999.0	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> <i>-999999.0</i>						
Location Referenced to Shoreline	1	No Information	Enumeration	Unitless	0	The location of an object in relation to a land water boundary.
<i>allowed values:</i> At Shoreline			Inland			No Information Offshore
Maritime Radiobeacon Present	1	No Information	Boolean	Unitless	0	An indication that a structure (for example: a maritime navigation beacon or a maritime navigation light) has an associated maritime radiobeacon. [Description] A maritime radiobeacon is an electronic aid to maritime navigation consisting of a radio transmitter that broadcasts distinctive and/or characteristic signals.
<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
Maritime Radiobeacon : Maritime Radiobeacon Type	3	No Information	Enumeration	Unitless	0	The type of an electronic aid to maritime navigation consisting of a radio transmitter that broadcasts distinctive and/or characteristic signals. [Description] For example, a directional radio beacon or a radar marker (RAMARK).
<i>allowed values:</i> Automated Identification System (AIS) No Information Radar Responder Beacon (RACON)			Circular Radiobeacon Other Radio Direction Finding Station			Directional Radiobeacon QTG Station Rotating Pattern Radiobeacon Long Range Air Navigation System (LORAN) C Radar Marker (RAMARK)
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Maritime Navigation Light : Multiple Light Ranges	1	noInformation	StructuredText	Unitless	254	A set of two numbers for light ranges of visibility (at a light) expressed in nautical miles. [Structure] The numbers are separated by a slash (/) if only two visibilities exist, or by a dash (-) separating the greatest and least visibilities if three or more exist.
<i>allowed values:</i> <i>noInformation</i>						
Permanent	1	No Information	Boolean	Unitless	0	An indication that a feature is permanent. [Description] Temporary features last, or are meant to last, for a limited time only.
<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Radar Reflector Present	1	No Information	Boolean	Unitless	0	An indication that an object has an associated radar reflector.
<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumlSMClassificationAll
<i>allowed values:</i> <i>U</i>						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	1	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Concrete Other			Fibreglass Plastic			Metal Wood No Information
Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
<i>allowed values:</i> False			No Information			True
Topmark Shape	1	No Information	Enumeration	Unitless	0	The characteristic topmark or daymark shape attached to a maritime aid to navigation to aid identification. [Description] May be secured at the top of a buoy or beacon.
<i>allowed values:</i> 2 Cones Base to Base 2 Spheres One over Other Can over Ball Cross over Ball No Information T-shaped			2 Cones Point to Point Ball over Cone Cone over Ball Cylinder Other Upright Cross			2 Cones Points Downward Besom Point Downward Cone Point Downward Diamond Sphere X-shaped 2 Cones Points Upward Besom Point Upward Cone Point Upward Diamond over Ball Square
Tower Shape	1	No Information	Enumeration	Unitless	0	The general shape and/or structure of a tower.
<i>allowed values:</i> Mast			No Information			Other Pole
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID						

Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
<i>allowed values:</i>	Above Surface		No Information		On Surface	
Width	1	-999999.0	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature MaritimeRadarRefLine (Line)

New ☐ Maritime Radar Reference Line

A track along which ships may be guided by coastal radar stations, especially in the event of reduced visibility.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i>	noInformation					
Bearing and Reciprocal Category	1	noInformation	StructuredText	Unitless	14	The true course of a vessel when proceeding along a track or route, followed by its reciprocal bearing. [Structure] Resolution of the bearing and reciprocal are to the nearest 0.1 arc degree, separated by a hyphen, for example: '053.1-233.1'.
<i>allowed values:</i>	noInformation					
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i>	[-999999, -999999]					
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i>	noInformation					
New Feature Code	1	FC130	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i>	FC130					
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i>	noInformation					
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i>	No Information					

New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<u>allowed values:</u> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<u>allowed values:</u> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<u>allowed values:</u> noInformation						
Restriction Information : Security Attributes Group <resource non- intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<u>allowed values:</u> noInformation						
Restriction Information : Security Attributes Group <resource owner- producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer

Feature MaritimeRoute (Area)New ☐ Maritime Route**A track or lane established for the safe passage of vessels.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Hydrographic Depth : Sounding Metadata : Bathymetric Measurement Quality Category	3	No Information	Enumeration	Unitless	0	A general evaluation of the qualities of a bathymetric measurement, as a category. [Description] Drying heights are typically captured using negative (bathymetric) sounding values; their certainty of measurement may be categorized in the same manner as positive values.
<i>allowed values:</i> Depth Doubtful Least Depth Not Applicable Unconfirmed Depth			Depth Known Maintained Depth Other Unmaintained Depth			Depth Unreliable No Information Safe Clearance Known
Hydrographic Depth : Sounding Metadata : Bathymetric Measurement Technique	3	No Information	Enumeration	Unitless	0	The technique used to determine water depth(s).
<i>allowed values:</i> Area Swept by Side-scan Sonar Computer Generated Lead-line Other Singlebeam			Area Swept by Vertical Acoustic System Diver Levelling Photogrammetry Underwater Utility Vehicle			Bathymetric LiDAR Electromagnetic Sensor No Information Side-scan Sonar
Bearing and Reciprocal Category	1	noInformation	StructuredText	Unitless	14	The true course of a vessel when proceeding along a track or route, followed by its reciprocal bearing. [Structure] Resolution of the bearing and reciprocal are to the nearest 0.1 arc degree, separated by a hyphen, for example: ',053.1-233.1'.
<i>allowed values:</i> noInformation						
Bearing from Seaward	1	-999999.0	REAL	Arc Degree	0	The bearing of an object measured from a position at sea to the object (not from the object to somewhere at sea).
<i>allowed values:</i> -999999.0						
Bidirectional	1	No Information	Boolean	Unitless	0	An indication that a feature supports bidirectional flow.
<i>allowed values:</i> False			No Information			True
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Description of Aids to Navigation	1	No Information	String	Unitless	2E+09	Textual description of aids to navigation marking a feature. [Description] For example, 'marked by buoys'.
<i>allowed values:</i> No Information						
Description of Reference Point	1	No Information	String	Unitless	2E+09	Description of the feature(s) which form a Leading Line or Clearing Line.
<i>allowed values:</i> No Information						
Direction of Flow	1	-999999.0	REAL	Arc Degree	0	The bearing of movement or direction of the flow.

	<i>allowed values:</i> -999999.0						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
New	Feature Code	1	FC165	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> FC165						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
	Hydrographic Depth	1	-999999.0	REAL	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
	<i>allowed values:</i> -999999.0						
	Length	1	-999999.0	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Maritime Navigation Marked	1	No Information	Boolean	Unitless	0	An indication that a feature is significant to maritime safety of navigation and is marked (for example: by a light or beacon) by a maritime-specific navigational aid. [Description] Mariners may also use other prominent features (for example: rotating aeronautical beacons or lighted structures) for informal navigational purposes.
	<i>allowed values:</i> False			No Information		True	
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Route Intended Use	1	No Information	Enumeration	Unitless	0	The intended use of a maritime route. [Description] Unless stated otherwise, routeing systems are recommended for use by all ships and may be made mandatory for all ships, certain categories of ships or ships carrying certain cargoes, or types and quantities of bunker fuel. Routeing systems are intended for use by day and by night in all weathers, in ice-free waters or under light ice conditions where no extraordinary manoeuvres or icebreaker assistance are required.
<i>allowed values:</i> Deep Water Route Recommended Direction of Traffic Flow Transit Route			No Information Recommended Route Two-way Route			Other Recommended Track for Deep Draft Vessels Q-Route Recommended Track for Other Than Deep Draft Vessels
Hydrographic Depth : Sounding Metadata : Sounding Datum	1	No Information	Enumeration	Unitless	0	The tidal datum to which soundings and drying heights are referenced. [Description] It is usually taken to correspond to a low water stage of the tide.
<i>allowed values:</i> Approximate Lowest Astronomical Tide Approximate Mean Sea Level High Water Springs Highest High Water Local Datum Lower Low Water Large Tide Mean High Water Mean Higher High Water Springs Mean Lower Low Water Mean Water Level No Information			Approximate Mean Low Water Chart Datum (Unspecified) Higher High Water Indian Spring High Water Low Water Lowest Astronomical Tide Mean High Water Neaps Mean Low Water Mean Lower Low Water Springs Neap Tide Other			Approximate Mean Low Water Springs Equinoctial Spring Low Water Higher High Water Large Tide Indian Spring Low Water Low Water Springs Lowest Low Water Mean High Water Springs Mean Low Water Neaps Mean Sea Level Nearly Highest High Water Spring Tide
Hydrographic Depth : Sounding Metadata : Sounding Datum Name	1	No Information	String	Unitless	80	The name of the tidal datum to which soundings and drying heights are referenced. [Description] Used when the sounding datum is known but not specified using Attribute: 'Sounding Datum'.

allowed values: No Information

Hydrographic Depth : Sounding Metadata : Sounding Velocity Correction Method	1	No Information	Enumeration	Unitless	0	The method of correction that has been used to correct a sounding velocity instrument reading to obtain the correct depth.
--	---	----------------	-------------	----------	---	--

allowed values: Mathews Tables
Sound Velocity MeterNo Information
Sounder 1500 Calibrated*Not Applicable*
Sounder 4800 CalibratedOther
Sounder Other Calibrated

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	--

allowed values: noInformation

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
--------------------------	---	---------------	----------------	----------	-----	--

allowed values: noInformation*allowed values:* pimGUID

Hydrographic Depth : Sounding Metadata : Vessel Draft Correction	1	No Information	Boolean	Unitless	0	An indication that a vessel draft correction has been applied.
---	---	----------------	---------	----------	---	--

allowed values: False

No Information

True

Width	1	-999999.0	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

True						
Width	1	-999999.0	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	BB155	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BB155						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Dismantled Unmaintained
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

Feature Marsh (Area)

New ☐ Marsh

A soft, poorly drained wetland that is characterized by the growth of only non-woody plants (for example: grasses) and often forms a transition region between a waterbody and land. [Description] It is subject to frequent or tidal inundations, but not considered to be continually under water. It lacks trees. A subtype of the more generalized wetland.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.

allowed values: -999999.0

Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Average Water Depth	1	[-999999.0, -999999.0]	Real_Interval	Metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999.0, -999999.0]						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Bottom Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing the bottom of a body of water.
<i>allowed values:</i> Bedrock Other Sand and Gravel			Clay and Silt Peat Sand over Mud			Gravel and Cobble Rocks and Boulders Silty Sands No Information Sand Soil
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0

Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
allowed values: Dry			Intermittent			No Information Perennial
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999.0						
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
allowed values: -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
allowed values: -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Milligrams per Litre	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
allowed values: -999999.0						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
allowed values: U						

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Tide Influenced	1	No Information	Boolean	Unitless	0	An indication that a waterbody is affected by the tide.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Undergrowth Density	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The fraction of land within a defined area that is covered by undergrowth (for example: scrub, brush, and/or bush).
<i>allowed values:</i> [-999999.0, -999999.0]						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable No Information Treatable Nonpotable Other						
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline Brackish No Information Seawater Brine Not Applicable Fresh Other						
Water Resource Information : Water Use	1	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic Commercial Livestock Other Domestic Irrigation Military Power Generation Industrial Municipal Recreational						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature MeasuredDistanceLine (Line)

New ☐ Measured Distance Line

A maritime course, the length of which has been accurately measured, whose endpoints are often established by leading lines. [Description] It is used by vessels to calibrate logs, engine revolution counters, and other onboard equipment, and to determine speed.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<u>allowed values:</u> noInformation						
Bearing and Reciprocal Category	1	noInformation	StructuredText	Unitless	14	The true course of a vessel when proceeding along a track or route, followed by its reciprocal bearing. [Structure] Resolution of the bearing and reciprocal are to the nearest 0.1 arc degree, separated by a hyphen, for example: '053.1-233.1'.
<u>allowed values:</u> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<u>allowed values:</u> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<u>allowed values:</u> noInformation						
New Feature Code	1	FC100	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> FC100						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<u>allowed values:</u> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Height of Object	1	-999999.0	REAL	metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i> Conical Other			Domed Pitched			Flat Semi-cylindrical No Information
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structure Shape	1	No Information	Enumeration	Unitless	0	The geometric form, appearance, and/or configuration of the feature as a whole.
<i>allowed values:</i> Arched No Information Pyramidal			Columnar Obelisk Spherical			Cross Other Statue Multiple Arched Plaque Statue on Pedestal
Tower Shape	1	No Information	Enumeration	Unitless	0	The general shape and/or structure of a tower.
<i>allowed values:</i> 'A' Frame No Information			'H' Frame Other			'I' Frame 'Y' Frame Mast

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).

<i>allowed values:</i>		Civilian	Joint Military and Civilian		Military	No Information	
		Other	Private		Public		
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation							
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information							
		Partially Operational	Non-operational		Not in Operation		Operational
			Planned		Temporarily Non-operational		
New	Feature Code	1	AL130	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL130							
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation							
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information							
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i>		Conventional	Historical Original		Historical Transliterated		Native Original
		Native Transliterated	No Information		Other		Provisional
		Unverified Original	Unverified Transliterated		Variant Original		Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0							
	Height of Object	1	-999999.0	REAL	metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0							

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.

New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography. <i>allowed values:</i> [-999999, -999999]
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public). <i>allowed values:</i> Civilian Other Joint Military and Civilian Private Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance. <i>allowed values:</i> noInformation
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures. <i>allowed values:</i> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AL130	CONSTRAINED_STRING	Unitless	5	Feature Code <i>allowed values:</i> AL130
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set. <i>allowed values:</i> noInformation
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end. <i>allowed values:</i> No Information
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2 <i>allowed values:</i> No Information Other

Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original
						Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Height of Object	1	-999999.0	REAL	metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i> Conical Other			Domed Pitched			Flat Semi-cylindrical No Information
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structure Shape	1	No Information	Enumeration	Unitless	0	The geometric form, appearance, and/or configuration of the feature as a whole.
<i>allowed values:</i> Arched No Information Pyramidal			Columnar Obelisk Spherical			Cross Other Statue Multiple Arched Plaque Statue on Pedestal
Tower Shape	1	No Information	Enumeration	Unitless	0	The general shape and/or structure of a tower.
<i>allowed values:</i> 'A' Frame No Information			'H' Frame Other			'I' Frame 'Y' Frame Mast
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						

allowed values: *pimGUID*

Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<u>allowed values:</u> <i>noInformation</i>						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature MilitaryInstallation (Area)New ☐ Military Installation

An installation designed for military use. [Description] For example, used to perform military operations, initiate forward movements, and/or furnish supplies. Often protected by fortifications or natural advantages.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	SU001	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> SU001						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
<i>allowed values:</i> False			No Information			True
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
New Military Operations Type	1	No Information	Enumeration	Unitless	0	Type of coordinated military actions of a state in response to a developing situation.
<i>allowed values:</i> Air Departure Point Command Post Evacuee Handling Centre Other			Amphibious Departure Point Evacuation Point Forward Operating Base Patrol Base			Brigade Maintenance Area Evacuee Assembly Area No Information Command Outpost Evacuee Collection Point Observation Post
Military Service Branch	1	No Information	Enumeration	Unitless	0	The branch of the armed forces of a nation. [Description] May also be applied to similar organizations following military discipline (for example: a coastguard).
<i>allowed values:</i> Air Force Coastguard No Information			Air National Guard Joint Other			Army Marines Army National Guard Navy
New Military Use Type	1	No Information	Enumeration	Unitless	0	Type of military line or area.
<i>allowed values:</i> Area of Interest Named Area of Interest Other Target Area of Interest			Area of Operations No Fly Zone Out of Bounds Temporary Area of Operations			Forward Line of Enemy Troops No Go Area Restricted Operation Zone Missile release line No Information Tactical Area of Responsibility
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMNonIC
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMOwnerProducer
<i>allowed values:</i>	noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat)' (CSP:Okra) (FMM:Organic Techniques) could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i>	noInformation					
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature MilitaryInstallation (Point)New ☐ Military Installation

An installation designed for military use. [Description] For example, used to perform military operations, initiate forward movements, and/or furnish supplies. Often protected by fortifications or natural advantages.

allowed values: pimGUID

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Minefield (Area)

Red ☐ Minefield

A site laid with explosive mines.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	Real	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).

allowed values: noInformation

New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
New	Feature Code	1	AL065	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AL065						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
	<i>allowed values:</i> U						
	Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
	<i>allowed values:</i> No Information			Other			

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

	<u>allowed values:</u> No Information			Other			
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information		True	
	Raw Material	3	No Information	Enumeration	Unitless	0	The principal 'raw', or input, material(s) involved in a production activity. [Description] If multiple 'raw' materials are specified then they are usually listed in descending order of importance.
	<u>allowed values:</u> Coal Ore Stone			Coke Other Sulphur		Gravel Salt	No Information Sand

Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AM040	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AM040						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u> No Information			Other			
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information		True	
	Raw Material	3	No Information	Enumeration	Unitless	0	The principal 'raw', or input, material(s) involved in a production activity. [Description] If multiple 'raw' materials are specified then they are usually listed in descending order of importance.
	<u>allowed values:</u> Coal Ore Stone			Coke Other Sulphur		Gravel Salt	No Information Sand
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
	<u>allowed values:</u> U						
	Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
	<u>allowed values:</u> No Information			Other			

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID

Feature MineShaftSuperstructure (Point)New ☐ Mine Shaft Superstructure

A structure over a vertical mine shaft containing machinery (for example: a winding head or hoist) used to transport minerals, equipment, and/or workers between the surface and various levels within the mine. [Description] It is usually the most prominent structure at a shaft mining facility.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AA020	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AA020						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False			No Information			True
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
	Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
	<i>allowed values:</i> Chromium Gold Nickel Silver			Coal Iron No Information Tin			Copper Lead Other Uranium Diamond Manganese Salt Zinc
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from aodelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
	<i>allowed values:</i> U						

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> <div>Brick</div> <div>Metal</div> <div>Reinforced Concrete</div> <div>Concrete</div> <div>No Information</div> <div>Steel</div> <div>Iron</div> <div>Other</div> <div>Stone</div> <div>Masonry</div> <div>Prestressed Concrete</div> <div>Wood</div>						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999.0

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).

<i>allowed values:</i> Civilian Other		Joint Military and Civilian Private		Military Public		No Information	
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation							
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational		Operational	
New	Feature Code	1	AL120	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL120							
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation							
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information		Other					
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original		Native Original Provisional Variant Transliterated	
	Highest Elevation	1	-999999.0	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0							
	Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
<i>allowed values:</i> False		No Information		True			
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information							

Military Service Branch	1	No Information	Enumeration	Unitless	0	The branch of the armed forces of a nation. [Description] May also be applied to similar organizations following military discipline (for example: a coastguard).
<i>allowed values:</i>	Air Force Marines		Army Navy		Coastguard No Information	
					Joint Other	
Missile Site Type	3	No Information	Enumeration	Unitless	0	The type of a missile site based on the class of missiles it houses.
<i>allowed values:</i>	Anti-ballistic Missile (ABM) No Information SA-11 Gadfly SA-15 Gauntlet SA-19 Grisom SA-5 Gammon SA-9 Gaskin		Intercontinental Ballistic Missile (ICBM) Other SA-12 Gladiator/Giant SA-16 Gimlet SA-2 Guideline SA-6 Gainful Surface-to-air Missile (SAM)		Intermediate-range Ballistic Missile (IRBM) SA-1 Guild SA-13 Gopher SA-17 Grizzly SA-3 Goa SA-7 Grail Surface-to-surface Missile (SSM)	
					Medium-range Ballistic Missile (MRBM) SA-10 Grumble SA-14 Gremlin SA-18 Grouse SA-4 Ganef SA-8 Gecko	
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i>	No Information					
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i>	False		No Information		True	
Permanent	1	No Information	Boolean	Unitless	0	An indication that a feature is permanent. [Description] Temporary features last, or are meant to last, for a limited time only.
<i>allowed values:</i>	False		No Information		True	
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i>	Construction Intact		Damaged No Information		Destroyed Unmaintained	
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i>	noInformation					

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Brick Metal Reinforced Concrete			Concrete No Information Steel			Iron Other Stone Masonry Prestressed Concrete Wood
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Moat (Area)

New ☐ Moat

A trench surrounding a tract of land and serving as a barrier. [Description] It is usually filled with water.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BH100	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BH100						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u> No Information			Other			
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<u>allowed values:</u> Dry			Intermittent			No Information Perennial
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<u>allowed values:</u> -999999.0						
	Maximum Design Water Depth	1	-999999.0	Real	Metre	0	The maximum depth of water that the object was designed to hold.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<u>allowed values:</u> -999999.0						
	Water Resource Information : pH	1	-999999.0	Real	Milligrams per Litre	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<u>allowed values:</u> -999999.0						
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<u>allowed values:</u> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Terrain Gap Width	1	-999999.0	REAL	metre	0	The minimum horizontal bridging distance necessary to cross a channel. [Description] The width is measured perpendicular to the direction of water flow from bank to bank, at the first usable break in slope on each side of the channel above mean high water. Usable banks are those accessible by vehicles; small unusable ledges and cliffs are not considered usable breaks in slopes.
<i>allowed values:</i> -999999.0						

Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Volume	1	-999999.0	REAL	cubicMetre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable No Information Nonpotable Other						
<i>allowed values:</i> Treatable						
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Brackish Brine Fresh						
<i>allowed values:</i> Mineral No Information Not Applicable Saline						
<i>allowed values:</i> Seawater						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Moat (Line)

New ☐ Moat**A trench surrounding a tract of land and serving as a barrier. [Description] It is usually filled with water.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN ⁻ . These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BH100	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BH100						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> No Information		Other					
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999.0							
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<u>allowed values:</u> Dry		Intermittent		No Information		Perennial	
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999.0							
	Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<u>allowed values:</u> -999999.0							
	Maximum Design Water Depth	1	-999999.0	Real	Metre	0	The maximum depth of water that the object was designed to hold.
<u>allowed values:</u> -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information							
	Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<u>allowed values:</u> -999999.0							
	Water Resource Information : pH	1	-999999.0	Real	Milligrams per Litre	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<u>allowed values:</u> -999999.0							
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<u>allowed values:</u> Construction Intact		Damaged No Information		Destroyed Unmaintained		Dismantled	

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights. <i>allowed values:</i> False No Information True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded. <i>allowed values:</i> -999999.0
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack). <i>allowed values:</i> noInformation
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography. <i>allowed values:</i> [-999999, -999999]
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public). <i>allowed values:</i> Civilian Other Joint Military and Civilian Private Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance. <i>allowed values:</i> noInformation
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures. <i>allowed values:</i> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AQ110	CONSTRAINED_STRING	Unitless	5	Feature Code <i>allowed values:</i> AQ110
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set. <i>allowed values:</i> noInformation
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end. <i>allowed values:</i> No Information
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2 <i>allowed values:</i> No Information Other
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.

<i>allowed values:</i> Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original		Native Original Provisional Variant Transliterated	
Guyed	1	No Information	Boolean	Unitless	0	An indication that an object is guided, secured, or steadied by guy wires.	
<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>	
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.	
<i>allowed values:</i> <i>-999999.0</i>							
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.	
<i>allowed values:</i> <i>-999999.0</i>							
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<i>allowed values:</i> <i>-999999.0</i>							
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i> No Information							
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i> No Information							
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.	
<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>	
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.	
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained	
Pylon Material	1	No Information	Enumeration	Unitless	0	The primary type of material composing a pylon. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.	
<i>allowed values:</i> Aluminum Masonry Steel			Concrete Metal Wood			Fibreglass No Information	
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll	
<i>allowed values:</i> <i>U</i>							

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Tower Shape	1	No Information	Enumeration	Unitless	0	The general shape and/or structure of a tower.
<i>allowed values:</i> Mast Tubular			No Information			Other Truss
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

	Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
	<i>allowed values:</i> noInformation						
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	AQ170	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AQ170						
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
	<i>allowed values:</i> Convenience Store Other			Meeting Place Petrol Sale			Motor Vehicle Repair Restroom No Information
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated

Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/c/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/c/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<div> <i>allowed values:</i> <div> Conical No Information Pyramidal </div> <div> Domed Other Sawtoothed </div> <div> Flat Pitched Semi-cylindrical </div> <div> Flat with Clerestory Pitched with Clerestory With Clerestory </div> </div>						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						

allowed values: *pimGUID*

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature MountainPass (Point)New ☐ Mountain Pass**A narrow route through a mountainous region or over a mountain range.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<u>allowed values:</u> <i>-999999.0</i>						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<u>allowed values:</u> <i>-999999.0</i>						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<u>allowed values:</u> <i>noInformation</i>						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<u>allowed values:</u> <i>[-999999, -999999]</i>						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<u>allowed values:</u> <i>noInformation</i>						
New Feature Code	1	DB150	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> <i>DB150</i>						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<u>allowed values:</u> <i>noInformation</i>						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> <i>No Information</i>						

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
	<u>allowed values:</u> U						
	Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
	<u>allowed values:</u> No Information			Other			
	Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
	<u>allowed values:</u> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

Feature MunitionStorageFacility (Area)

New ☐ Munition Storage Facility

A facility for the storage of munitions (for example: bombs, missiles, warheads, mines or ammunition). [Description] Specifically, storage of weapons charged with: explosives; propellant; pyrotechnics; initiating composition; or nuclear, chemical, or biological material for use in military operations. Facilities may range in size from a small stockpile of munitions (sometimes termed an 'ammo dump') that may be reverted to a large perimeter-controlled site with multiple dispersed bunkers laid out to minimize the effect of accidental detonation (sometimes termed a 'munitions depot').

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature MunitionStorageFacility (Point)New ☐ Munition Storage Facility

A facility for the storage of munitions (for example: bombs, missiles, warheads, mines or ammunition). [Description] Specifically, storage of weapons charged with: explosives; propellant; pyrotechnics; initiating composition; or nuclear, chemical, or biological material for use in military operations. Facilities may range in size from a small stockpile of munitions (sometimes termed an 'ammo dump') that may be revetted to a large perimeter-controlled site with multiple dispersed bunkers laid out to minimize the effect of accidental detonation (sometimes termed a 'munitions depot').

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AM065	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AM065						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.

<u>allowed values:</u> <i>noInformation</i>						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Variant Transliterated						
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> <i>-999999.0</i>						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> <i>-999999.0</i>						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> <i>-999999.0</i>						
Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
<u>allowed values:</u> <i>False</i>						
No Information						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> <i>False</i>						
No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<u>allowed values:</u> <i>True</i>						

<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained	Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll	
<i>allowed values:</i> U							
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode	
<i>allowed values:</i> No Information			Other				
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem	
<i>allowed values:</i> noInformation							
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC	
<i>allowed values:</i> noInformation							
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer	
<i>allowed values:</i> noInformation							
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.	
<i>allowed values:</i> noInformation							
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature NamedLocation (Line)

New ☐ Named Location

A location that normally does not appear as a specific, characterized object but that has a name that is required to be displayed in association with that location. [Description] For example, the name of the Alps or the Sahara.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).

New	Feature Code	1	ZD040	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> ZD040						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information						
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Named Location Type	1	No Information	Enumeration	Unitless	0	The type of a location that normally does not appear as a specific, characterized object but that has a name that is required to be displayed in association with that location.
	<i>allowed values:</i> Arctic Land Other			Area Populated Locality		Locality Region	No Information
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
	<i>allowed values:</i> U						
	Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
	<i>allowed values:</i> No Information						
	<i>allowed values:</i> Other						

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature NaturalPool (Area)New ☐ Natural Pool

A naturally formed pool of water. [Description] It is usually fed by surface drainage from the surrounding region and/or water arising from an underground source (for example: a spring or a resurgence).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aquifer Name	1	No Information	String	Unitless	2E+09	The common or scientific name of an aquifer.
<i>allowed values:</i> No Information						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						

	Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
	<i>allowed values:</i> -999999.0						
	Direction of Flow	1	-999999.0	REAL	arcDegree	0	The bearing of movement or direction of the flow.
	<i>allowed values:</i> -999999.0						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	BH170	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BH170						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.

	Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	2	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<i>allowed values:</i> Dry			Intermittent			No Information Perennial
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
	<i>allowed values:</i> False			No Information			True

Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Natural Pool Type	1	No Information	Enumeration	Unitless	0	The type of a natural pool, generally based on its origin.
<i>allowed values:</i> No Information Walled-in Spring			Other			Resurgence Spring
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Volume	1	-999999.0	REAL	cubicMetre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
New Water Resource Information : Water Flow	1	-999999.0	Real	Litres per Minute	0	The rate of water flow through or exiting from a feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable			No Information Treatable			Nonpotable Other

Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i>	Alkaline Mineral Seawater		Brackish No Information		Brine Not Applicable	Fresh Saline
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i>	Agricultural Irrigation Institutional No Information Sanitary Domestic		Commercial Livestock Other		Domestic Irrigation Military Power Generation	Industrial Municipal Recreational
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999.0

Feature NaturalPool (Point)

New ☐ Natural Pool

A naturally formed pool of water. [Description] It is usually fed by surface drainage from the surrounding region and/or water arising from an underground source (for example: a spring or a resurgence).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aquifer Name	1	No Information	String	Unitless	2E+09	The common or scientific name of an aquifer.
<i>allowed values:</i>	No Information					
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i>	-999999.0					
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i>	-999999.0					
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i>	noInformation					
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i>	[-999999, -999999]					

Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<u>allowed values:</u> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<u>allowed values:</u> -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<u>allowed values:</u> Civilian Other Joint Military and Civilian Private Military Public No Information						
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<u>allowed values:</u> -999999.0						
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<u>allowed values:</u> -999999.0						
Direction of Flow	1	-999999.0	REAL	arcDegree	0	The bearing of movement or direction of the flow.
<u>allowed values:</u> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<u>allowed values:</u> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<u>allowed values:</u> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational						
New Feature Code	1	BH170	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> BH170						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<u>allowed values:</u> noInformation						
Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> No Information Other						

Geographic Name Information : Geographic Name Type	2	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry			Intermittent			No Information Perennial
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Natural Pool Type	1	No Information	Enumeration	Unitless	0	The type of a natural pool, generally based on its origin.
<i>allowed values:</i> No Information Walled-in Spring			Other			Resurgence Spring
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/c/ism/7.0.0/CVenumISMCClassificationAll
<i>allowed values:</i> U						

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. <i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						

Volume	1	-999999.0	REAL	cubicMetre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
New Water Resource Information : Water Flow	1	-999999.0	Real	Litres per Minute	0	The rate of water flow through or exiting from a feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable No Information Treatable Nonpotable Other						
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Seawater Brackish No Information Brine Not Applicable Fresh Saline						
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic Commercial Livestock Other Domestic Irrigation Military Power Generation Industrial Municipal Recreational						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature NaturalPoolAON (Area)

New ☒ Natural Pool Area of Numerous

Area of numerous naturally formed pools of water.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aquifer Name	1	No Information	String	Unitless	2E+09	The common or scientific name of an aquifer.
<i>allowed values:</i> No Information						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						
Direction of Flow	1	-999999.0	REAL	arcDegree	0	The bearing of movement or direction of the flow.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational

New	Feature Code	1	NM170	CONSTRAINED_STRING	Unitless	5	Feature Code
	<u>allowed values:</u>	NM170					
	Feature Count	1	-999999	Integer	Unitless	0	The number of features of the same type within a defined region. [Description] May be used to indicate the number of features actually present in near proximity to each other although only one representative feature is collected. For example, the number of adjacent pipelines.
	<u>allowed values:</u>	-999999					
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<u>allowed values:</u>	noInformation					
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u>	No Information		Other			
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<u>allowed values:</u>	Dry		Intermittent		No Information	
	Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
	<u>allowed values:</u>	False		No Information		True	
	Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<u>allowed values:</u>	-999999.0					
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u>	No Information					
	Natural Pool Type	1	No Information	Enumeration	Unitless	0	The type of a natural pool, generally based on its origin.
	<u>allowed values:</u>	No Information Walled-in Spring		Other		Resurgence Spring	
	Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<u>allowed values:</u>	-999999.0					
	Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<u>allowed values:</u>	-999999.0					
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<u>allowed values:</u>	Construction Intact		Damaged No Information		Destroyed Unmaintained	
						Dismantled	

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation

Feature NonBuildingStructure (Area)

New ☐ Non-building Structure

A free-standing self-supporting construction (for example: a large piece of equipment) designed to support human activities (for example: agriculture, manufacturing, or mining) but not intended for human occupancy and/or habitation (for example: a house, a bank, an office, or a stadium). [Description] May have only limited protection from the weather (for example: a hayrick) and often composed of components specialized for a particular activity (for example: animal feeding, material storage, or traffic control) or process (for example: chemical reaction, heating, mixing, or physical shaping). For example, a cane press, a cement mill, a cotton gin, a distillation tower, and a rock crusher.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Manufacturing Information : By-product	3	No Information	Enumeration	Unitless	0	The principal by-product(s) of a production, mining, or agricultural activity. [Description] If multiple by-products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Ash Other Sewage			Cinders Radioactive Material Slag			No Byproduct Refuse No Information Scrap-metal
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information

<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AL014	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL014						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information			True
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<u>allowed values:</u> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
	Manufacturing Information : Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.

allowed values:	Aircraft Biochemical Chemical Coke Cotton Electronic Equipment Fluorine Gas Ice Liquefied Natural Gas (LNG) Metal Munitions Nuclear Fuel Petrochemical Petroleum Lubricant Radioactive Material Sewage Sugar Vegetation Product Zinc	Aluminum Biodiesel Clothing Concrete Desalinated Water Explosive Food Glass Iron Liquefied Petroleum Gas (LPG) Milk No Information Olive Oil Petrol Phosphorus Rice Silver Textile Water	Ammunition Brick Coal Consumer Goods Electric Power Fertilizer Frozen Water Gold Lead Lumber Milled Grain No Product Other Petroleum Plastic Rubber Snow Tobacco Whale Products	Asphalt Cement Coffee Copper Electrical Equipment Fish Fruit Heating Steam and/or Water Lime Manganese Motor Vehicle Non-solid Hydrocarbon Fuel Paper Petroleum and/or Natural Gas Prestressed Concrete Salt Steel Uranium Wine		
Manufacturing Information : Raw Material	3	No Information	Enumeration	Unitless	0	The principal 'raw', or input, material(s) involved in a production activity. [Description] If multiple 'raw' materials are specified then they are usually listed in descending order of importance.
allowed values:	Aluminum Chemical Copper Gold Lumber No Raw Material Paper Radioactive Material Snow Tobacco Wood	Asphalt Clay Cotton Ice Manganese Oil Petroleum and/or Natural Gas Rubber Steel Uranium Zinc	Bauxite Coal Gas Iron Metal Ore Plant Material Sewage Sugar Vegetation	Cement Coke Glass Lead No Information Other Plastic Silver Textile Water		
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
allowed values:	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
allowed values:	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
allowed values:	noInformation					

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature NonBuildingStructure (Point)

New ☐ Non-building Structure

A free-standing self-supporting construction (for example: a large piece of equipment) designed to support human activities (for example: agriculture, manufacturing, or mining) but not intended for human occupancy and/or habitation (for example: a house, a bank, an office, or a stadium). [Description] May have only limited protection from the weather (for example: a hayrick) and often composed of components specialized for a particular activity (for example: animal feeding, material storage, or traffic control) or process (for example: chemical reaction, heating, mixing, or physical shaping). For example, a cane press, a cement mill, a cotton gin, a distillation tower, and a rock crusher.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights. <i>allowed values:</i> False True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded. <i>allowed values:</i> -999999.0
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature. <i>allowed values:</i> -999999.0
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack). <i>allowed values:</i> noInformation
Manufacturing Information : By-product	3	No Information	Enumeration	Unitless	0	The principal by-product(s) of a production, mining, or agricultural activity. [Description] If multiple by-products are specified then they are usually listed in descending order of importance. <i>allowed values:</i> Ash Cinders No Byproduct No Information Other Radioactive Material Refuse Scrap-metal Sewage Slag
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography. <i>allowed values:</i> [-999999, -999999]
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public). <i>allowed values:</i> Civilian Joint Military and Civilian Military No Information Other Private Public
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance. <i>allowed values:</i> noInformation
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures. <i>allowed values:</i> No Information Non-operational Not in Operation Operational Partially Operational Planned Temporarily Non-operational
New Feature Code	1	AL014	CONSTRAINED_STRING	Unitless	5	Feature Code <i>allowed values:</i> AL014
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set. <i>allowed values:</i> noInformation
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end. <i>allowed values:</i> No Information

New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Manufacturing Information : Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.

Manufacturing Information : Raw Material	3	No Information	Enumeration	Unitless	0	The principal 'raw', or input, material(s) involved in a production activity. [Description] If multiple 'raw' materials are specified then they are usually listed in descending order of importance.
<i>allowed values:</i>	Aluminum Chemical Copper Gold Lumber No Raw Material Paper Radioactive Material Snow Tobacco Wood	Asphalt Clay Cotton Ice Manganese Oil Petroleum and/or Natural Gas Rubber Steel Uranium Zinc	Bauxite Coal Gas Iron Metal Ore Plant Material Sewage Sugar Vegetation	Cement Coke Glass Lead No Information Other Plastic Silver Textile Water		
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i>	noInformation					

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

<i>allowed values:</i> pimGUID						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature NonWaterWell (Point)

New ☐ Non-water Well

A shaft sunk into the ground to reach and tap a supply of liquids and/or gases other than water intended for use in agriculture or domestic consumption. [Description] Typically drilled to tap underground reservoirs of hydrocarbons (for example: petroleum or natural gas). May also, for example, yield geothermally heated liquids for use in power generation or heating, or brine for use in the extraction of salt.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
allowed values: -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
allowed values: noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
allowed values: [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
allowed values: noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
allowed values: No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AA054	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: AA054						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
allowed values: noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values: No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

allowed values: Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.

allowed values: -999999.0

Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
-------------------	---	-----------	------	-------	---	---

allowed values: -999999.0

Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
--	---	-----------	------	-------	---	--

allowed values: -999999.0

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
--------	---	-----------	------	-------	---	--

allowed values: -999999.0

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
-------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
---	---	----------------	--------	----------	----	--

allowed values: No Information

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
---------------------	---	----------------	---------	----------	---	---

allowed values: False

No Information

True

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.

No Information

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/icsm/7.0.0/CVEnumISMClassificationAll
---	---	---	----------	----------	----	--

allowed values: U

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
---	---	----------------	----------	----------	----	---

allowed values: No Information

Other

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Rig Present	1	No Information	Boolean	Unitless	0	An indication that a rig is present. [Description] A rig is a superstructure fitted for drilling or lifting operations for extraction and/or exploitation of natural resources.
<i>allowed values:</i> False			No Information			True
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation

Feature NuclearReactorContainment (Area)

New ☐ Nuclear Reactor Containment

A building-like structure intended to create a barrier against the release of radioactivity generated during nuclear power operations. [Description] The structure is usually heavily reinforced. It houses equipment used to manage a self-sustaining nuclear reaction of fissile material. The consequent release of energy may be used to generate electricity, as in a power plant.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).

<u>allowed values:</u> Conventional Native Transliterated Unverified Original				Historical Original No Information Unverified Transliterated	Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated	
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999.0							
	Least Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling. The least depth below surface level may be located at ground or water level and therefore have a value of zero (for example: an opencast extraction mine, a terrain depression or a lake). For depths defined with respect to a time-varying water level, consideration should be given to the use of Attribute: 'Hydrographic Depth'.
<u>allowed values:</u> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information							
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information							

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. <i>allowed values:</i> <i>U</i>						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMDissem
<i>allowed values:</i> <i>noInformation</i>						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMNonIC
<i>allowed values:</i> <i>noInformation</i>						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMOwnerProducer
<i>allowed values:</i> <i>noInformation</i>						
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i> Conical Other			Domed Pitched			Flat Sawtoothed No Information Semi-cylindrical
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques))' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques))' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> <i>noInformation</i>						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

No Information						
Steel						
Other						
Prestressed Concrete						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999.0

Feature NuclearReactorContainment (Point)New ☐ Nuclear Reactor Containment

A building-like structure intended to create a barrier against the release of radioactivity generated during nuclear power operations. [Description] The structure is usually heavily reinforced. It houses equipment used to manage a self-sustaining nuclear reaction of fissile material. The consequent release of energy may be used to generate electricity, as in a power plant.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False						
No Information						
True						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).

	allowed values: <i>noInformation</i>						
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	allowed values: <i>[-999999, -999999]</i>						
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	allowed values: Civilian Other			Joint Military and Civilian Private			Military Public No Information
	Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
	allowed values: <i>-999999.0</i>						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	allowed values: <i>noInformation</i>						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	allowed values: No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	AD041	CONSTRAINED_STRING	Unitless	5	Feature Code
	allowed values: <i>AD041</i>						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	allowed values: <i>noInformation</i>						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	allowed values: <i>No Information</i>						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	allowed values: <i>No Information</i>						
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	allowed values: Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	allowed values: <i>-999999.0</i>						

Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Least Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling. The least depth below surface level may be located at ground or water level and therefore have a value of zero (for example: an opencast extraction mine, a terrain depression or a lake). For depths defined with respect to a time-varying water level, consideration should be given to the use of Attribute: 'Hydrographic Depth'.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact						
Damaged No Information						
Destroyed Unmaintained						
Dismantled						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/c/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/c/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i> Conical Other			Domed Pitched			Flat Sawtoothed No Information Semi-cylindrical
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID

						Native Original Provisional Variant Transliterated
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vegetation Trafficability Impact	1	-999999.0	Real	Percent	0	The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
<i>allowed values:</i> -999999.0						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Oasis (Point)

New ☐ Oasis

A fertile tract of land that occurs in a desert wherever a permanent supply of fresh water is available. [Description] Oasis vary in size from a pond with a group of date palms around small springs to the oasis cities of the deserts with extended agricultural cultivation.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0

<i>allowed values:</i> EC020						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Feature OfficePark (Area)

New ☐ Office Park

A commercial facility consisting of multiple office buildings tenanted by one or more non-retail businesses (for example: corporate management, consulting services, or research and development) and supportive businesses (for example: a restaurant serving mid-day meals or a post office) that share a common park-like setting consisting of landscaping (for example: lawns, ornamental plantings, or ponds), parking facilities, and common entrances from adjacent roads. [Description] May also include commercial tenants involved in light industry (for example: gem cutting or specialized electronics manufacture).

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information			True
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<u>allowed values:</u> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
	Manufacturing Information : Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.

allowed values:	Aircraft Biochemical Chemical Coke Cotton Electronic Equipment Fluorine Gas Ice Liquefied Natural Gas (LNG) Metal Munitions Nuclear Fuel Petrochemical Petroleum Lubricant Radioactive Material Sewage Sugar Vegetation Product Zinc	Aluminum Biodiesel Clothing Concrete Desalinated Water Explosive Food Glass Iron Liquefied Petroleum Gas (LPG) Milk No Information Olive Oil Petrol Phosphorus Rice Silver Textile Water	Ammunition Brick Coal Consumer Goods Electric Power Fertilizer Frozen Water Gold Lead Lumber Milled Grain No Product Other Petroleum Plastic Rubber Snow Tobacco Whale Products	Asphalt Cement Coffee Copper Electrical Equipment Fish Fruit Heating Steam and/or Water Lime Manganese Motor Vehicle Non-solid Hydrocarbon Fuel Paper Petroleum and/or Natural Gas Prestressed Concrete Salt Steel Uranium Wine		
Manufacturing Information : Raw Material	3	No Information	Enumeration	Unitless	0	The principal 'raw', or input, material(s) involved in a production activity. [Description] If multiple 'raw' materials are specified then they are usually listed in descending order of importance.
allowed values:	Aluminum Chemical Copper Gold Lumber No Raw Material Paper Radioactive Material Snow Tobacco Wood	Asphalt Clay Cotton Ice Manganese Oil Petroleum and/or Natural Gas Rubber Steel Uranium Zinc	Bauxite Coal Gas Iron Metal Ore Plant Material Sewage Sugar Vegetation	Cement Coke Glass Lead No Information Other Plastic Silver Textile Water		
Religious Information : Religious Designation	1	No Information	Enumeration	Unitless	0	A designation denoting a religion or system of belief.
allowed values:	Buddhism Islam No Information Roman Catholic	Chaldean Judaism Orthodox Shia	Christian Mixed and/or No Designation Other Shinto	Hinduism Nestorian Protestant Sunni		
Religious Information : Religious Facility Type	1	No Information	Enumeration	Unitless	0	The type of a facility, building, structure or site that is designed and designated to be used for religious activities, based on its structure and/or the principal activity for which it was designed.
allowed values:	Cathedral Hermitage Monastery Other Seminary Tabernacle	Chapel Marabout Mosque Pagoda Shrine Temple	Church Minaret No Information Religious Community Stupa	Convent Mission Noviciate Retreat Synagogue		
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMClassificationAll

allowed values: *U*

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOSINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
---	---	----------------	----------	----------	----	--

allowed values: *No Information**Other*

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumlSMDissem
---	---	---------------	----------------	----------	-----	---

allowed values: *noInformation*

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumlSMNonIC
--	---	---------------	----------------	----------	-----	---

allowed values: *noInformation*

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumlSMOwnerProducer
---	---	---------------	----------------	----------	-----	---

allowed values: *noInformation*

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	---

allowed values: *noInformation*

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
--------------------------	---	---------------	----------------	----------	-----	--

allowed values: *noInformation**allowed values:* *pimGUID*

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature OffshoreConstruction (Area)

New ☐ Offshore Construction

An artificial structure that is located offshore. [Description] It usually has a surface that is raised above the sea and may be used as a working stage for conducting offshore operations (for example: drilling for petroleum and/or natural gas, loading and/or unloading vessels, or navigation support).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
allowed values: False			No Information			True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
allowed values: -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
allowed values: -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
allowed values: noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
allowed values: [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
allowed values: Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
allowed values: noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
allowed values: No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BD115	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: BD115						

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<u>allowed values:</u> noInformation						
	Fog Signal : Fog Signal Type	1	No Information	Enumeration	Unitless	0	The type of a fog signal based on its signal characteristics and method of generation.
	<u>allowed values:</u> Bell Horn Other Submarine Bell			Diaphone Nautophone Radio Tyfon		Explosive No Information Reed Whistle	Gong None Siren
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Hydrographic Vertical Positioning Information : Maritime Navigation Marked	1	No Information	Boolean	Unitless	0	An indication that a feature is significant to maritime safety of navigation and is marked (for example: by a light or beacon) by a maritime-specific navigational aid. [Description] Mariners may also use other prominent features (for example: rotating aeronautical beacons or lighted structures) for informal navigational purposes.
	<u>allowed values:</u> False			No Information		True	

Maritime Radiobeacon : Maritime Radiobeacon Type	3	No Information	Enumeration	Unitless	0	The type of an electronic aid to maritime navigation consisting of a radio transmitter that broadcasts distinctive and/or characteristic signals. [Description] For example, a directional radio beacon or a radar marker (RAMARK).
<i>allowed values:</i>	Automated Identification System (AIS) No Information		Circular Radiobeacon Other		Directional Radiobeacon QTG Station Rotating Pattern Radiobeacon	
	Radar Responder Beacon (RACON)		Radio Direction Finding Station		Long Range Air Navigation System (LORAN) C Radar Marker (RAMARK)	
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i>	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i>	No Information					
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i>	False		No Information		True	
Offshore Construction Primary Structure	1	No Information	Enumeration	Unitless	0	The type of primary structure of an offshore construction upon which various pieces of operation-specific equipment are affixed.
<i>allowed values:</i>	Barge Platform Vessel		Catenary Turntable Submerged Platform		No Information Submerged Turret Other Terminal Buoy	
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i>	Construction Intact		Damaged No Information		Destroyed Unmaintained Dismantled	
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i>	noInformation					

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumlSMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Aluminum No Information			Concrete Other			Iron Steel Metal Treated Timber
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature OffshoreConstruction (Point)

New ☐ Offshore Construction

An artificial structure that is located offshore. [Description] It usually has a surface that is raised above the sea and may be used as a working stage for conducting offshore operations (for example: drilling for petroleum and/or natural gas, loading and/or unloading vessels, or navigation support).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BD115	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BD115						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Fog Signal : Fog Signal Type	1	No Information	Enumeration	Unitless	0	The type of a fog signal based on its signal characteristics and method of generation.
<i>allowed values:</i> Bell Horn Other Submarine Bell			Diaphone Nautophone Radio Tyfon			Explosive No Information Reed Whistle Gong None Siren
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Hydrographic Vertical Positioning Information : Maritime Navigation Marked	1	No Information	Boolean	Unitless	0	An indication that a feature is significant to maritime safety of navigation and is marked (for example: by a light or beacon) by a maritime-specific navigational aid. [Description] Mariners may also use other prominent features (for example: rotating aeronautical beacons or lighted structures) for informal navigational purposes.
	<u>allowed values:</u> False			No Information			True
	Maritime Radiobeacon : Maritime Radiobeacon Type	3	No Information	Enumeration	Unitless	0	The type of an electronic aid to maritime navigation consisting of a radio transmitter that broadcasts distinctive and/or characteristic signals. [Description] For example, a directional radio beacon or a radar marker (RAMARK).
	<u>allowed values:</u> Automated Identification System (AIS) No Information Radar Responder Beacon (RACON)			Circular Radiobeacon Other Radio Direction Finding Station			Directional Radiobeacon QTG Station Rotating Pattern Radiobeacon Long Range Air Navigation System (LORAN) C Radar Marker (RAMARK)
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Offshore Construction Primary Structure	1	No Information	Enumeration	Unitless	0	The type of primary structure of an offshore construction upon which various pieces of operation-specific equipment are affixed.
<i>allowed values:</i> Barge Platform Vessel			Catenary Turntable Submerged Platform			No Information Submerged Turret Other Terminal Buoy
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Stem Diameter	1	[-999999.0, -999999.0]	REAL_INTERVAL	metre	0	The average diameter of the tree trunks in an area, measured at a height of approximately 1.5 metres or 4.5 feet on the high side (if on a hillside) above the surface of the ground. [Description] Commonly referred to as the 'diameter at breast height' (dbh). For trees up to 2 metres high, the stem diameter is measured at the mid-point between the ground and the stem tip.
<i>allowed values:</i> [-999999.0, -999999.0]						
Tree Spacing	1	[-999999.0, -999999.0]	REAL_INTERVAL	metre	0	The average tree spacing between trees in a stand, determined from centre to centre of adjacent trees.
<i>allowed values:</i> [-999999.0, -999999.0]						
Undergrowth Density	1	[-999999.0, -999999.0]	REAL_INTERVAL	Percent	0	The fraction of land within a defined area that is covered by undergrowth (for example: scrub, brush, and/or bush).
<i>allowed values:</i> [-999999.0, -999999.0]						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vegetation Trafficability Impact	1	-999999.0	Real	Percent	0	The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
<i>allowed values:</i> -999999.0						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0

Feature Orchard (Point) New ☐ Orchard

A tract covered by systematic plantings of trees that yield fruits (including nuts).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Canopy Cover	1	-999999.0	REAL	Percent	0	The fraction of canopy cover within a defined area during the season of maximum foliage. [Description] The canopy is formed by the upper branches of the trees in a forest forming a more or less continuous layer.
<i>allowed values:</i> -999999.0						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Crop Information : Crop Species	3	No Information	Enumeration	Unitless	0	The predominant species of a crop land.
<i>allowed values:</i> Almond Chestnut Fruit Tree Olive Peach			Apple Citrus Hazelnut Ornamental Crop Walnut			Berry Coconut Maple Other Carob Date No Information Palmetto
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Crop Information : Farming Pattern	3	No Information	Enumeration	Unitless	0	The general arrangement(s) and/or pattern(s) of farming fields.
<i>allowed values:</i> Intermingled Trees No Information Treeless			Intermingled Woods Other Trellised			Irregular Regular Linear Terraced
New Feature Code	1	EA040	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> EA040						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Foliage Type	1	No Information	Enumeration	Unitless	0	The predominant foliage type of the vegetation.

allowed values: Deciduous Other			Evergreen			Mixed	No Information
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.	
allowed values: No Information							
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2	
allowed values: No Information			Other				
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.	
allowed values: Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.	
allowed values: -999999.0							
Highest Elevation	1	-999999.0	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.	
allowed values: -999999.0							
Crop Information : Irrigation Method	1	No Information	Enumeration	Unitless	0	The method used to supply crops with water.	
allowed values: Center Pivot Linear Move Subirrigation			Drip No Information Terrace			Furrow Other	Lateral Move Overhead
Length	1	-999999.0	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
allowed values: -999999.0							
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
allowed values: No Information							
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
allowed values: No Information							
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.	
allowed values: False			No Information			True	
Predominant Vegetation Height	1	-999999.0	REAL	Metre	0	The predominant height (the height of at least 50 percent) of the vegetation.	

allowed values: -999999.0

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISClassificationAll

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed (' ' and ') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	---

allowed values: noInformation

Stem Diameter	1	[-999999.0, -999999.0]	REAL_Interval	Metre	0	The average diameter of the tree trunks in an area, measured at a height of approximately 1.5 metres or 4.5 feet on the high side (if on a hillside) above the surface of the ground. [Description] Commonly referred to as the 'diameter at breast height' (dbh). For trees up to 2 metres high, the stem diameter is measured at the mid-point between the ground and the stem tip.

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information							
			Other				
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i>		Conventional	Historical Original		Historical Transliterated		Native Original
		Native Transliterated	No Information		Other		Provisional
		Unverified Original	Unverified Transliterated		Variant Original		Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0							
	Height of Object	1	-999999.0	REAL	metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0							

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact						
Damaged						
Destroyed						
Dismantled						
No Information						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

Feature OutdoorTheatreScreen (Point)

New ☐ Outdoor Theatre Screen

A large outdoor screen for showing motion pictures.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<u>allowed values:</u> False			No Information			True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<u>allowed values:</u> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<u>allowed values:</u> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.

<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other						
Joint Military and Civilian Private						
Military Public						
No Information						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational						
Non-operational Planned						
Not in Operation Temporarily Non-operational						
Operational						
New Feature Code	1	AK080	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AK080						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

<u>allowed values:</u> No Information						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.

<i>allowed values:</i> [-999999, -999999]						
Deck Level	1	-999999	Integer	unitless	0	The relative level of a deck within a set of vertically stacked decks, one over another, in a transportation structure (for example: on a bridge or in a tunnel). [Description] The lowest deck is numbered '1' and the remaining decks are numbered in ascending order (bottom to top) with the uppermost deck being assigned the highest value. When no deck is present, the deck level is zero.
<i>allowed values:</i> -999999						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	AL155	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL155						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information						
Length	1	-999999.0	Other REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Overhead Clearance	1	-999999.0	REAL	metre	0	The least distance between the travelled way and any obstruction vertically above it. [Description] Reference STANAG 2253.
<i>allowed values:</i> -999999.0						
Overhead Obstruction Type	1	No Information	Enumeration	Unitless	0	The type of an overhead obstruction based on its shape, structure and/or intended use.
<i>allowed values:</i> Arcade Building Conveyor Memorial Monument Overhead Walkway Railway Power Line Traffic Sign						
Arch Bridge Span Building Overhang Entrance and/or Exit No Information Parking Garage Roof Transportation Block						
Bridge Span Cable Frame Bridge Span Non-building Structure Pipeline Route-related Structure Transportation Route Protection Structure						
Bridge Superstructure Cableway Gantry Other Pipeline Crossing Point Scaffold Tunnel						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact						
Damaged No Information						
Destroyed Unmaintained						
Dismantled						

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> Canal Pedestrian			Inland Waterway Railway			No Information Other Road
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID						

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature PackIce (Area)

New ☐ Pack Ice

Term used in a wide sense to include any area of sea ice other than fast ice. [Description] Pack ice commonly consists of connected floating plates of ice and has a mosaic look. Fast ice is defined as sea ice which remains fast, generally in the position where originally formed, and which may attain a considerable thickness. Fast ice is found along coasts, where it is attached to the shore, or over shoals, where it may be held in position by islands, grounded icebergs, or grounded polar ice.

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMOwnerProducer
<i>allowed values:</i> noInformation						
Seasonal Ice Limit	1	noInformation	StructuredText	Unitless	14	The month of the seasonal limit of the presence of ice that poses a hazard to maritime traffic. [Description] Used to specify the month for which an ice limit line is determined; hazardous ice may be present up to the polar side of the ice limit line. [DatatypeSpecification] A structured text value specifying a month with implied year. [EncodingSpecification] Formatted in accordance with ISO 8601:2000, 5.2.1.3 e, Basic format, as a specific month in the implied year, as '--MM' (for example: '--04' for the month of April).
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

Feature PackIce (Line)New ☐ Pack Ice

Term used in a wide sense to include any area of sea ice other than fast ice. [Description] Pack ice commonly consists of connected floating plates of ice and has a mosaic look. Fast ice is defined as sea ice which remains fast, generally in the position where originally formed, and which may attain a considerable thickness. Fast ice is found along coasts, where it is attached to the shore, or over shoals, where it may be held in position by islands, grounded icebergs, or grounded polar ice.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	BJ070	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BJ070						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. Feature Park (Area)

New ☐ Park

An area of defined limits which is set aside for human recreation and enjoyment and/or for historic preservation purposes, and is usually maintained in a natural, semi-natural, or ornamentally planted state. [Description] Parks may be in urban areas such as Central Park in New York City or in less developed areas such as Poplar Forest in Forest, Virginia, where Thomas Jefferson's plantation and plantation house are located.

	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						

allowed values: noInformation

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature ParkingGarage (Area)New ☐ Parking Garage**A designated, multi-level, structure used for parking and/or storing vehicles. [Description] May be present as part of a building or as a separate structure.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False						
No Information						
Angle of Orientation	1	-999999.0	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						

	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	AQ141	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AQ141						
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
	<i>allowed values:</i> Emergency Operations Motor Vehicle Repair Road Transport			Meeting Place No Information Stop			Motor Vehicle Parking Other Warehousing and Storage Motor Vehicle Rental Petrol Sale
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Floor Count	1	-999999	Integer	Unitless	0	The number of floors in a structure (for example: a building).
	<i>allowed values:</i> -999999						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.

allowed values: -999999.0

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
--------	---	-----------	------	-------	---	--

allowed values: -999999.0

Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
---------------------	---	----------------	---------	----------	---	--

allowed values: False

No Information

True

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
-------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
---	---	----------------	--------	----------	----	--

allowed values: No Information

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
---------------------	---	----------------	---------	----------	---	---

allowed values: False

No Information

True

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
--------------------	---	----------------	-------------	----------	---	--

allowed values: Construction

Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
---	---	---	----------	----------	----	--

allowed values: U

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
---	---	----------------	----------	----------	----	---

	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
	<u>allowed values:</u> False			No Information			True
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information			True
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<u>allowed values:</u> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
---	---	---	----------	----------	----	--

allowed values: U

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
---	---	----------------	----------	----------	----	--

allowed values: No Information

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

allowed values: noInformation

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
--------------------------	---	---------------	----------------	----------	-----	--

[Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumlSMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumlSMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumlSMNonIC
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMOwnerProducer

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

<i>allowed values:</i> No Information							
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0

<i>allowed values:</i> No Information							
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False							
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact							
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U							
<i>allowed values:</i> Damaged No Information							
<i>allowed values:</i> Destroyed Unmaintained							
<i>allowed values:</i> Dismantled							

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
<i>allowed values:</i> False			No Information			True
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
<i>allowed values:</i> Above Surface			Below Ground Surface			No Information On Surface

Feature PicnicSite (Area) New ☐ Picnic Site

A site that has been set aside for picnics. [Description] It may have picnic tables for public use.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AK061	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AK061						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

allowed values: Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original
						Native Original Provisional Variant Transliterated
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values: False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.

Feature Pipeline (Line)

New ☐ Pipeline

A connected set of pipes for conveying liquids, slurries, or gases. [Description] Usually for long distances and often located underground.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.

allowed values: *-999999.0*

	Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
	<i>allowed values:</i> noInformation						
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
	Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<i>allowed values:</i> -999999.0						
	Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<i>allowed values:</i> -999999.0						
	Contained within Tunnel	1	No Information	Boolean	Unitless	0	The object is at least partially located within, or passes through, a tunnel. [Description] For example, a canal passing through a tunnel.
	<i>allowed values:</i> False			No Information			True
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
	Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999.0						
	Deck Level	1	-999999	Integer	unitless	0	The relative level of a deck within a set of vertically stacked decks, one over another, in a transportation structure (for example: on a bridge or in a tunnel). [Description] The lowest deck is numbered '1' and the remaining decks are numbered in ascending order (bottom to top) with the uppermost deck being assigned the highest value. When no deck is present, the deck level is zero.
	<i>allowed values:</i> -999999						
	Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
	<i>allowed values:</i> -999999.0						
	Diameter	1	-999999.0	REAL	metre	0	The dimension of a circular, cylindrical, or spherical feature taken from boundary to boundary along a straight line passing through its centre.
	<i>allowed values:</i> -999999.0						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	AQ113	CONSTRAINED_STRING	Unitless	5	Feature Code

<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other

<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999.0						
Least Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling. The least depth below surface level may be located at ground or water level and therefore have a value of zero (for example: an opencast extraction mine, a terrain depression or a lake). For depths defined with respect to a time-varying water level, consideration should be given to the use of Attribute: 'Hydrographic Depth'.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Linear Feature Arrangement	1	No Information	Enumeration	Unitless	0	The arrangement of parallel linear features on a single support structure including both directions (if applicable). [Description] For example, two railways sharing a single roadbed.
<i>allowed values:</i> Double Arrangement Single Arrangement			Multiple Arrangements			No Information Other
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Parallel Line Count	1	-999999	Integer	unitless	0	The total number of nominally parallel lines within the feature.
<i>allowed values:</i> -999999						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged			Destroyed Dismantled
Pipeline Type	3	No Information	Enumeration	Unitless	0	The type of a pipeline or pipeline-associated equipment based on structure and/or intended use(s).
<i>allowed values:</i> Bubbler System Outfall Pipe			Intake Pipe Pipeline Valve			No Information Other Sewer Transport Pipe
Predominant Average Water Velocity	1	-999999.0	REAL	Metre per Second	0	The average water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i> -999999.0						
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Chemical Other Water			Gas Petrol			Heating Steam and/or Water Petroleum No Information Sewage
New Pump Present	1	No Information	Boolean	Unitless	0	An indication that a feature supports, contains, or makes use of one or more pumps.
<i>allowed values:</i> False			No Information			True
Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).
<i>allowed values:</i> Depressed			Level			No Information Raised
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumlSMClassificationAll
<i>allowed values:</i> U						

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Aluminum Lead Other Steel			Concrete Masonry Plastic Wood			Copper Metal Prestressed Concrete Iron No Information Reinforced Concrete
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
<i>allowed values:</i> False			No Information			True
Supported by Bridge Span	1	No Information	Boolean	Unitless	0	The object is at least partially supported by, or passes across, a bridge span. [Description] For example, an aqueduct carried across a valley by one or more bridge spans.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						

Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
<i>allowed values:</i> Above Surface No Information			Above Waterbody Bottom On Surface			Below Ground Surface Below Waterbody Bottom
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
New Water Resource Information : Water Flow	1	-999999.0	Real	Litres per Minute	0	The rate of water flow through or exiting from a feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated			No Information			Other Treatable
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline			Brackish No Information Seawater			Brine Not Applicable Fresh Other
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic			Commercial Livestock Other			Domestic Irrigation Military Power Generation Industrial Municipal Recreational
Waterbody Overhead Obstruction	1	No Information	Boolean	Unitless	0	An indication that an object is an overhead obstruction over a navigable waterbody.
<i>allowed values:</i> False			No Information			True

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Contained within Tunnel	1	No Information	Boolean	Unitless	0	The object is at least partially located within, or passes through, a tunnel. [Description] For example, a canal passing through a tunnel.
<i>allowed values:</i> False			No Information			True
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						
Deck Level	1	-999999	Integer	unitless	0	The relative level of a deck within a set of vertically stacked decks, one over another, in a transportation structure (for example: on a bridge or in a tunnel). [Description] The lowest deck is numbered '1' and the remaining decks are numbered in ascending order (bottom to top) with the uppermost deck being assigned the highest value. When no deck is present, the deck level is zero.
<i>allowed values:</i> -999999						

	Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
	<u>allowed values:</u> -999999.0						
	Diameter	1	-999999.0	REAL	metre	0	The dimension of a circular, cylindrical, or spherical feature taken from boundary to boundary along a straight line passing through its centre.
	<u>allowed values:</u> -999999.0						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<u>allowed values:</u> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<u>allowed values:</u> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	NU113	CONSTRAINED_STRING	Unitless	5	Feature Code
	<u>allowed values:</u> NU113						
	Feature Count	1	-999999	Integer	Unitless	0	The number of features of the same type within a defined region. [Description] May be used to indicate the number of features actually present in near proximity to each other although only one representative feature is collected. For example, the number of adjacent pipelines.
	<u>allowed values:</u> -999999						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<u>allowed values:</u> noInformation						
	Floating	1	No Information	Boolean	Unitless	0	An indication that an object is floating.
	<u>allowed values:</u> False			No Information			True
	Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u> No Information			Other			
	Geographic Name Information : Geographic Name Type	3	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						

Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999.0						
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<u>allowed values:</u> -999999.0						
Least Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling. The least depth below surface level may be located at ground or water level and therefore have a value of zero (for example: an opencast extraction mine, a terrain depression or a lake). For depths defined with respect to a time-varying water level, consideration should be given to the use of Attribute: 'Hydrographic Depth'.
<u>allowed values:</u> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999.0						
Linear Feature Arrangement	1	No Information	Enumeration	Unitless	0	The arrangement of parallel linear features on a single support structure including both directions (if applicable). [Description] For example, two railways sharing a single roadbed.
<u>allowed values:</u> Double Arrangement Single Arrangement			Multiple Arrangements		No Information	Other
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<u>allowed values:</u> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False			No Information		True	
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<u>allowed values:</u> -999999.0						
Parallel Line Count	1	-999999	Integer	unitless	0	The total number of nominally parallel lines within the feature.
<u>allowed values:</u> -999999						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<u>allowed values:</u> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.

<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained	Dismantled
Pipeline Type	3	No Information	Enumeration	Unitless	0	The type of a pipeline or pipeline-associated equipment based on structure and/or intended use(s).	
<i>allowed values:</i>	Intake Pipe Transport Pipe		No Information			Other	Outfall Pipe
Predominant Average Water Velocity	1	-999999.0	REAL	Metre per Second	0	The average water velocity, exclusive of high water due to runoff or low water due to drought.	
<i>allowed values:</i>	-999999.0						
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.	
<i>allowed values:</i>	Chemical Other Water		Gas Petrol			Heating Steam and/or Water Petroleum	No Information Sewage
New Pump Present	1	No Information	Boolean	Unitless	0	An indication that a feature supports, contains, or makes use of one or more pumps.	
<i>allowed values:</i>	False		No Information			True	
Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).	
<i>allowed values:</i>	Depressed		Level			No Information	Raised
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISClassificationAll	
<i>allowed values:</i>	U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode	
<i>allowed values:</i>	No Information		Other				
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISDissem	
<i>allowed values:</i>	noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISNonIC	
<i>allowed values:</i>	noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISOwnerProducer	
<i>allowed values:</i>	noInformation						

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Aluminum Lead Other Steel			Concrete Masonry Plastic Wood			Copper Metal Prestressed Concrete Iron No Information Reinforced Concrete
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
<i>allowed values:</i> False			No Information			True
Supported by Bridge Span	1	No Information	Boolean	Unitless	0	The object is at least partially supported by, or passes across, a bridge span. [Description] For example, an aqueduct carried across a valley by one or more bridge spans.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
<i>allowed values:</i> Above Surface No Information			Above Waterbody Bottom On Surface			Below Ground Surface On Waterbody Bottom Below Waterbody Bottom
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
New Water Resource Information : Water Flow	1	-999999.0	Real	Litres per Minute	0	The rate of water flow through or exiting from a feature.
<i>allowed values:</i> -999999.0						

Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated			No Information			Other Treatable
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline			Brackish No Information Seawater			Brine Not Applicable Fresh Other
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic			Commercial Livestock Other			Domestic Irrigation Military Power Generation Industrial Municipal Recreational
Waterbody Overhead Obstruction	1	No Information	Boolean	Unitless	0	An indication that an object is an overhead obstruction over a navigable waterbody.
<i>allowed values:</i> False			No Information			True

Feature PipelineCrossingPoint (Point)

New ☐ Pipeline Crossing Point

A traversable site extending across a pipeline that acts as a passageway for cross-country movement of vehicles or troops.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational

New	Feature Code	1	AL165	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AL165						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencl . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information						
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<i>allowed values:</i> Construction Intact			Damaged No Information		Destroyed Unmaintained	Dismantled

	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False			No Information			True
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
	<i>allowed values:</i> U						
	Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
	<i>allowed values:</i> No Information			Other			
	Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
	<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vegetation Trafficability Impact	1	-999999.0	Real	Percent	0	The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
<i>allowed values:</i> -999999.0						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature PolarIce (Area)New ☐ Polar Ice

Sea ice that is more than one year old and more than 3 metres thick. [Description] Sea ice is any form of ice which has originated from sea water.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	BJ080	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BJ080						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. <i>allowed values:</i>	Conventional	Historical Original	Native Transliterated	No Information	Other	Variant Original	Native Original	Provisional	Variant Transliterated
	Unverified Original	Unverified Transliterated							
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.			
<i>allowed values:</i> -999999.0									
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.			
<i>allowed values:</i> -999999.0									
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i>						noInformation
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i>						No Information
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i>						-999999.0
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i>						-999999.0
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i>						-999999.0
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i>						No Information

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Manufacturing Information : Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Aircraft Biochemical Chemical Coke Cotton Electronic Equipment Fluorine Gas Ice Liquefied Natural Gas (LNG) Metal Munitions Nuclear Fuel Petrochemical Petroleum Lubricant Radioactive Material Sewage Sugar Vegetation Product Zinc			Aluminum Biodiesel Clothing Concrete Desalinated Water Explosive Food Glass Iron Liquefied Petroleum Gas (LPG) Milk No Information Olive Oil Petrol Phosphorus Rice Silver Textile Water			Ammunition Asphalt Brick Cement Coal Coffee Copper Consumer Goods Copper Electric Power Electrical Equipment Fish Fertilizer Fruit Frozen Water Gold Heating Steam and/or Water Lead Lime Lumber Manganese Milled Grain Motor Vehicle No Product Non-solid Hydrocarbon Fuel Other Paper Petroleum and/or Natural Gas Plastic Prestressed Concrete Rubber Salt Snow Steel Tobacco Uranium Vegetation Whale Products Wine
Manufacturing Information : Raw Material	3	No Information	Enumeration	Unitless	0	The principal 'raw', or input, material(s) involved in a production activity. [Description] If multiple 'raw' materials are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Aluminum Chemical Copper Gold Lumber No Raw Material Paper Radioactive Material Snow Tobacco Wood			Asphalt Clay Cotton Ice Manganese Oil Petroleum and/or Natural Gas Rubber Steel Uranium Zinc			Bauxite Cement Coal Coke Glass Lead Metal No Information Ore Other Plant Material Plastic Sewage Silver Textile Vegetation Water
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll

allowed values: *U*

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
---	---	----------------	----------	----------	----	---

allowed values: No Information

Other

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
---	---	---------------	----------------	----------	-----	---

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

True

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Port (Point)

New ☐ Port

A place provided with terminal and transfer facilities for loading and/or discharging cargo or passengers, usually located in a harbour. [Description] A port and its related waters together comprise a harbour.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Manufacturing Information : By-product	3	No Information	Enumeration	Unitless	0	The principal by-product(s) of a production, mining, or agricultural activity. [Description] If multiple by-products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Ash Other Sewage			Cinders Radioactive Material Slag			No Byproduct Refuse No Information Scrap-metal
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational

New	Feature Code	1	BB009	CONSTRAINED_ STRING	Unitless	5	Feature Code
	<i>allowed values:</i>	BB009

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Tide Influenced	1	No Information	Boolean	Unitless	0	An indication that a waterbody is affected by the tide.
<i>allowed values:</i> False			No Information			True
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature PowerSubstation (Area)

New ☐ Power Substation

A facility, along a power transmission line, in which electric current is switched, transformed, and/or converted.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational

New	Feature Code	1	AD030	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AD030						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencl . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information

	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False		No Information		True		

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMNonIC
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMOwnerProducer
<i>allowed values:</i>	noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed (' ' and ' ') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i>	noInformation					
Substation Type	3	No Information	Enumeration	Unitless	0	The type of an electricity distribution substation based on its function(s).
<i>allowed values:</i>	Converter Substation Transformer Substation		No Information			Other Switched Substation

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

[Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
Substation Type	3	No Information	Enumeration	Unitless	0	The type of an electricity distribution substation based on its function(s).
<i>allowed values:</i> <i>noInformation</i> <i>allowed values:</i> Converter Substation Transformer Substation No Information Other Switched Substation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> <i>noInformation</i> <i>allowed values:</i> <i>pimGUID</i>						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Aluminum Metal Reinforced Concrete Brick No Information Steel Concrete Other Stone Masonry Prestressed Concrete Wood						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature PreparedWatercourseCross (Point)

New ☐ Prepared Watercourse Crossing

A location on a watercourse that has ramps, structural piles, and/or piers constructed on one or both shores to allow for suitable future crossing operations using floating bridges or rafting equipment. [Description] For example, a prepared float bridge site or a prepared raft site.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	Real	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded. <i>allowed values:</i> -999999.0
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack). <i>allowed values:</i> noInformation
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography. <i>allowed values:</i> [-999999, -999999]
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public). <i>allowed values:</i> Civilian Other Joint Military and Civilian Private Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance. <i>allowed values:</i> noInformation
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures. <i>allowed values:</i> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AQ111	CONSTRAINED_STRING	Unitless	5	Feature Code <i>allowed values:</i> AQ111
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set. <i>allowed values:</i> noInformation
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end. <i>allowed values:</i> No Information
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2 <i>allowed values:</i> No Information Other
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status. <i>allowed values:</i> Conventional Native Transliterated Unverified Original Historical Original No Information Unverified Transliterated Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated

Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact Damaged No Information Destroyed Unmaintained Dismantled						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

allowed values: pimGUID

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature PublicSquare (Point)

New ☐ Public Square

An open site that serves as a public meeting location in a built-up area.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999.0	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AL170	CONSTRAINED_STRING	Unitless	5	Feature Code

allowed values: <i>AL170</i>							
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
allowed values: <i>noInformation</i>							
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values: <i>No Information</i>							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (":"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencl . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
allowed values: <i>No Information</i>							
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
allowed values: <i>Conventional Native Transliterated Unverified Original</i>				<i>Historical Original No Information Unverified Transliterated</i>	<i>Historical Transliterated Other Variant Original</i>	<i>Native Original Provisional Variant Transliterated</i>	
	Length	1	-999999.0	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: <i>-999999.0</i>							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: <i>No Information</i>							
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: <i>No Information</i>							
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
allowed values: <i>Construction Intact</i>				<i>Damaged No Information</i>	<i>Destroyed Unmaintained</i>	<i>Dismantled</i>	
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMCClassificationAll

[EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
<i>allowed values:</i> False			No Information			True
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature PumpingStation (Area)

New ☐ Pumping Station

A facility to move solids, liquids or gases by means of pressure or suction.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Average Water Depth	1	[-999999.0, -999999.0]	Real_Interval	Metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999.0, -999999.0]						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						
New Water Resource Information : Device Power Type	1	No Information	Enumeration	Unitless	0	The method by the device is powered, if any.

<i>allowed values:</i> Compressed Air No Information Steam		Electricity Other		Gravity Petroleum Product		Manual Solar	
New	Water Resource Information : Device Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the device and the underlying ground (terrain), liquid or waterbody bottom.
<i>allowed values:</i> Above Surface On Waterbody Bottom		Below Ground Surface Other		No Information Submerged		On Surface	
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation							
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational		Operational	
New	Feature Code	1	AQ116	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AQ116							
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> No Information Pipeline Transport		Other Solid Mineral Fuel Mining		Petroleum and/or Gas Extraction Utilities		Petroleum Refining	
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation							
	Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information		Other					
	Geographic Name Information : Geographic Name Type	2	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original		Native Original Provisional Variant Transliterated	
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0							

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
<i>allowed values:</i> False			No Information		True	
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information		True	
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Milligrams per Litre	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information		Destroyed Unmaintained	
Predominant Maximum Water Depth	1	-999999.0	REAL	Metre	0	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> -999999.0						
Predominant Minimum Water Depth	1	-999999.0	REAL	Metre	0	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> -999999.0						
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Chemical Petrol			Gas Petroleum		No Information Sewage	
					Other Water	
New Water Resource Information : Pump Type	1	No Information	Enumeration	Unitless	0	The type of pump used to move liquid or semi-liquid material from one location to another.
<i>allowed values:</i> Airlift No Information Turbine			Centrifugal Other Vacuum		Gravity Reciprocating	
					Jet Rotary	

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Aluminum Brick Concrete Iron						
Masonry Metal No Information Other						
Prestressed Concrete Reinforced Concrete Steel Stone						
Wood						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
New Water Resource Information : Water Flow	1	-999999.0	Real	Cubic Metres per Second	0	The rate of water flow through or exiting from a feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated No Information Nonpotable Other						
Potable Treatable						
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Brackish Brine Fresh						
Mineral No Information Not Applicable Other						
Saline Seawater						
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Commercial Domestic Irrigation Industrial						
Institutional Livestock Military Municipal						
No Information Other Power Generation Recreational						
Sanitary Domestic						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Average Water Depth	1	[-999999.0, -999999.0]	Real_Interval	Metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999.0, -999999.0]						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information

	Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999.0						
	Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
	<i>allowed values:</i> -999999.0						
New	Water Resource Information : Device Power Type	1	No Information	Enumeration	Unitless	0	The method by the device is powered, if any.
	<i>allowed values:</i> Compressed Air No Information Steam			Electricity Other		Gravity Petroleum Product	Manual Solar
New	Water Resource Information : Device Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the device and the underlying ground (terrain), liquid or waterbody bottom.
	<i>allowed values:</i> Above Surface On Waterbody Bottom			Below Ground Surface Other		No Information Submerged	On Surface
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned		Not in Operation Temporarily Non-operational	Operational
New	Feature Code	1	AQ116	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AQ116						
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
	<i>allowed values:</i> No Information Pipeline Transport			Other Solid Mineral Fuel Mining		Petroleum and/or Gas Extraction Utilities	Petroleum Refining
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	2	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.

<i>allowed values:</i>	Conventional	Native Transliterated	Unverified Original	Historical Original	No Information	Unverified Transliterated	Historical Transliterated	Other	Variant Original	Native Original	Provisional	Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.						
<i>allowed values:</i>	<i>-999999.0</i>											
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.						
<i>allowed values:</i>	<i>-999999.0</i>											
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.						
<i>allowed values:</i>	<i>-999999.0</i>											
Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.						
<i>allowed values:</i>	<i>False</i>			No Information			<i>True</i>					
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.						
<i>allowed values:</i>	<i>-999999.0</i>											
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.						
<i>allowed values:</i>	No Information											
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.						
<i>allowed values:</i>	No Information											
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.						
<i>allowed values:</i>	<i>False</i>			No Information			<i>True</i>					
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).						
<i>allowed values:</i>	<i>-999999.0</i>											
Water Resource Information : pH	1	-999999.0	Real	Milligrams per Litre	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.						
<i>allowed values:</i>	<i>-999999.0</i>											
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.						
<i>allowed values:</i>	Construction Intact		Damaged		No Information		Destroyed Unmaintained		Dismantled			
Predominant Maximum Water Depth	1	-999999.0	REAL	Metre	0	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.						
<i>allowed values:</i>	<i>-999999.0</i>											

	Predominant Minimum Water Depth	1	-999999.0	REAL	Metre	0	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
	<i>allowed values:</i>	-999999.0					
	Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
