Feature Stable (Area)

New ☐ Stable

A building similar to a barn and adapted for the shelter and feeding of domestic animals, being divided into individual stalls. [Description] Although commonly used to house horses, it may be used to house other animals (for example: prize cattle, sheep or goats) and often includes a storage loft (for example: for hay).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<u>allowed values:</u> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<u>allowed values:</u> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).

allowed values: noInformation

New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	AJ080	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AJ080						
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
	<i>allowed values:</i> Animal Boarding Raising of Animals			Hobbies and/or Leisure Activities Recreation			No Information Other
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.

allowed values: -999999.0

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
--------	---	-----------	------	-------	---	--

allowed values: -999999.0

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
-------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
---	---	----------------	--------	----------	----	--

allowed values: No Information

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
---------------------	---	----------------	---------	----------	---	---

allowed values: False

No Information

True

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
--------------------	---	----------------	-------------	----------	---	--

allowed values: Construction
IntactDamaged
No InformationDestroyed
Unmaintained

Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
---	---	---	----------	----------	----	--

allowed values: U

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
---	---	----------------	----------	----------	----	---

allowed values: No Information

Other

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
---	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
--	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer

Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i>	Conical		Domed			Flat
	No Information		Other			Pitched
	Pyramidal		Sawtoothed			Semi-cylindrical
						Flat with Clerestory
						Pitched with Clerestory
						With Clerestory
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

allowed values: *noInformation*

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
--------------------------	---	---------------	----------------	----------	-----	--

Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i>	Adobe Brick		Brick			Concrete
	Masonry		Metal			No Information
	Prestressed Concrete		Reinforced Concrete			Sod
	Stone		Wood			Iron
						Other
						Steel
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

allowed values: *noInformation*

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

	Stone	Wood				
Width	1	-999999.0	REAL	metre	0	<p>The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane.</p> <p>[Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.</p>

Feature Stadium (Area)New ☐ Stadium

A field and/or stage partly or completely surrounded by a structure designed to allow spectators to stand or sit while viewing an event. [Description] The field and/or stage may be enclosed in a building or be outdoors. Stadiums are surrounded on most or all sides by tiered seating for spectators. Often designed in size and shape to accommodate specific sports (for example: baseball, football, basketball or ice hockey), theater or musical performances.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999.0	Real	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Cover Closure Type	1	No Information	Enumeration	Unitless	0	The extent and/or nature of the cover (for example: a roof) of a structure.
<i>allowed values:</i> Complete Partial			Moveable			No Information Open

New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<u>allowed values:</u> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<u>allowed values:</u> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	AK160	CONSTRAINED_STRING	Unitless	5	Feature Code
	<u>allowed values:</u> AK160						
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
	<u>allowed values:</u> Club Recreation Sports, Amusement and Recreation			Food Service Religious Activities			No Information Restaurant Other Sports Centre
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<u>allowed values:</u> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

allowed values: -999999.0

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
-------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
---	---	----------------	--------	----------	----	--

allowed values: No Information

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
---------------------	---	----------------	---------	----------	---	---

allowed values: False

No Information

True

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
--------------------	---	----------------	-------------	----------	---	--

allowed values: Construction

Unmaintained

Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
---	---	---	----------	----------	----	--

allowed values: U

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
---	---	----------------	----------	----------	----	---

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

						Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained
						Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i> Conical No Information Pyramidal			Domed Other Sawtoothed			Flat Pitched Semi-cylindrical Flat with Clerestory Pitched with Clerestory With Clerestory
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original
						Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem

allowed values: *noInformation*

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMNonIC
--	---	---------------	----------------	----------	-----	---

allowed values: *noInformation*

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMOwnerProducer
---	---	---------------	----------------	----------	-----	---

allowed values: *noInformation*

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	---

allowed values: *noInformation*

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
--------------------------	---	---------------	----------------	----------	-----	--

allowed values: *noInformation*allowed values: *pimGUID*

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature SteepGrade (Line)

New ☐ Steep Grade

A stretch along a land transportation route where the slope is high enough to slow, hinder, or even stop traffic. [Description] The percent (%) slope is the ratio of change in elevation (vertical distance) to horizontal ground distance multiplied by 100.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	AQ120	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AQ120						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencl . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Gradient Length	1	-999999.0	REAL	metre	0	The length of a road or railway segment having a significant gradient, specifically greater than or equal to 7 percent (%) for a road or greater than or equal to 3 percent (%) for a railway.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False		No Information				True

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). <i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Surface Slope	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.
<i>allowed values:</i> [-999999.0, -999999.0]						
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> No Information			Other			
Road						Pedestrian Railway

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

	<u>allowed values:</u> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Predominant Feature Height	1	-999999.0	REAL	metre	0	The predominant height (the height of at least 50 percent) of the feature measured from the lowest point of the base at ground or water level (downhill side/downstream side).
	<u>allowed values:</u> -999999.0						
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMCClassificationAll
	<u>allowed values:</u> U						
	Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode

<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed (' ' and ') substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ('). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	2	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> No Information			Other			
Surface Slope	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	Rock Soil The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.
<i>allowed values:</i> [-999999.0, -999999.0]						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

<i>allowed values:</i> GB045						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (":"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999.0							
	Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
<u>allowed values:</u> False							
No Information							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information							
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information							
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False							
No Information							
True							

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained Dismantled
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i>	Aircraft Coal Gas Other Salt Tobacco		Ammunition Cobbles Gravel Petrol Sand Uranium			Biodiesel Coke Lumber Petroleum Stone Water Chemical Explosive No Information Radioactive Material Timber
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i>	noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

allowed values: *noInformation*

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
--------------------------	---	---------------	----------------	----------	-----	---

allowed values: *noInformation*allowed values: *pimGUID*

Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
---------------------------------	---	---------------	----------------	----------	----	--

allowed values: *noInformation*

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature **StorageDepot (Point)** New ☐ **Storage Depot**

A tract used for the storage of products and/or supplies.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<u>allowed values:</u> <i>No Information</i>						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<u>allowed values:</u> <i>-999999.0</i>						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<u>allowed values:</u> <i>-999999.0</i>						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<u>allowed values:</u> <i>noInformation</i>						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<u>allowed values:</u> <i>[-999999, -999999]</i>						

	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	AM010	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AM010						
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
	<i>allowed values:</i> Agriculture Manufacturing Other Road Freight Transport Transport			Commerce Materials Recovery Petroleum and/or Gas Extraction Road Transport Warehousing and Storage			Defence Activities Mining and Quarrying Power Generation Sales Yard Wholesale Merchant Emergency Operations No Information Railway Transport Transfer Hub
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
<i>allowed values:</i> False			No Information		True	
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information		True	
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information		Destroyed Unmaintained	
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Aircraft Coal Gas Other Salt Tobacco			Ammunition Cobbles Gravel Petrol Sand Uranium		Biodiesel Coke Lumber Petroleum Stone Water

<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation

[Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic. <i>allowed values:</i> -999999.0
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack). <i>allowed values:</i> noInformation
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography. <i>allowed values:</i> [-999999, -999999]
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water. <i>allowed values:</i> -999999.0
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density. <i>allowed values:</i> -999999.0
Containment Berm Present	1	No Information	Boolean	Unitless	0	An indication that a facility (for example: a storage tank, a drum storage area, or a liquid transfer area) is surrounded by an embankment or wall that provides a barrier to retain liquid (for example: leaked fuel oil). [Description] The embankment or wall is typically part of a spill containment system that may additionally provide fire protection, product recovery and/or process isolation. <i>allowed values:</i> False No Information True
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public). <i>allowed values:</i> Civilian Other Joint Military and Civilian Private Military Public No Information
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life. <i>allowed values:</i> -999999.0
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance. <i>allowed values:</i> noInformation
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures. <i>allowed values:</i> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AM070	CONSTRAINED_STRING	Unitless	5	Feature Code

<i>allowed values:</i> AM070							
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation							
	Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc. [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information							
	Geographic Name Information : Geographic Name Type	2	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original							
<i>allowed values:</i> Historical Original No Information Unverified Transliterated							
<i>allowed values:</i> Historical Transliterated Other Variant Original							
<i>allowed values:</i> Native Original Provisional Variant Transliterated							
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0							
	Height of Object	1	-999999.0	REAL	metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0							
	Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
<i>allowed values:</i> False							
<i>allowed values:</i> No Information							
<i>allowed values:</i> True							
	Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.

<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False No Information True						
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact Damaged No Information Destroyed Unmaintained Dismantled						
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Beverage Biodiesel Chemical Gas Liquefied Natural Gas (LNG) Liquefied Petroleum Gas (LPG) No Information Other Petrol Petroleum Radioactive Material Sewage Water						
New Pump Present	1	No Information	Boolean	Unitless	0	An indication that a feature supports, contains, or makes use of one or more pumps.
<i>allowed values:</i> False No Information True						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structure Shape	1	No Information	Enumeration	Unitless	0	The geometric form, appearance, and/or configuration of the feature as a whole.
<i>allowed values:</i>			Board-like Prism Cylindrical with Domed Top Horizontal Capped Cylindrical Pyramidal Square Prism	Cubic Cylindrical with Flat Top Horizontal Cylindrical Rectangular Prism Vertical Capped Cylindrical	Cylindrical on Tower Cylindrical with Framework No Information Spherical Vertical Cylindrical	Cylindrical with Conical Top Domed Other Spherical on Column
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
<i>allowed values:</i> False			No Information		True	
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).

allowed values:	Aluminum Metal Reinforced Concrete		Concrete No Information Steel		Iron Other		Masonry Prestressed Concrete
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.	
allowed values:	noInformation						
Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.	
allowed values:	Above Surface		Below Ground Surface			No Information	On Surface
Volume	1	-999999.0	REAL	cubicMetre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.	
allowed values:	-999999.0						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.	
allowed values:	-999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).	
allowed values:	-999999.0						
Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.	
allowed values:	Contaminated Potable		No Information Treatable			Nonpotable	Other
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.	
allowed values:	Alkaline Mineral Saline		Brackish No Information Seawater			Brine Not Applicable	Fresh Other
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.	
allowed values:	Agricultural Irrigation Institutional No Information Sanitary Domestic		Commercial Livestock Other			Domestic Irrigation Military Power Generation	Industrial Municipal Recreational
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
allowed values: -999999.0							
	Height of Object	1	-999999.0	REAL	metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
allowed values: -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
allowed values: -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999.0							
	Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
allowed values: False				No Information	True		
	Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
allowed values: -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.

<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False No Information True						
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact Damaged No Information Destroyed Unmaintained Dismantled						
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Beverage Biodiesel Chemical Gas Liquefied Natural Gas (LNG) Liquefied Petroleum Gas (LPG) No Information Other Petrol Petroleum Radioactive Material Sewage Water						
New Pump Present	1	No Information	Boolean	Unitless	0	An indication that a feature supports, contains, or makes use of one or more pumps.
<i>allowed values:</i> False No Information True						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structure Shape	1	No Information	Enumeration	Unitless	0	The geometric form, appearance, and/or configuration of the feature as a whole.
<i>allowed values:</i> Board-like Prism Cylindrical with Domed Top Horizontal Capped Cylindrical Pyramidal Square Prism			Cubic Cylindrical with Flat Top Horizontal Cylindrical Rectangular Prism Vertical Capped Cylindrical			Cylindrical on Tower Cylindrical with Framework No Information Spherical Vertical Cylindrical
						Cylindrical with Conical Top Domed Other Spherical on Column
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).

allowed values:	Aluminum Metal Reinforced Concrete		Concrete No Information Steel		Iron Other		Masonry Prestressed Concrete
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.	
allowed values:	noInformation						
Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.	
allowed values:	Above Surface		Below Ground Surface			No Information	On Surface
Volume	1	-999999.0	REAL	cubicMetre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.	
allowed values:	-999999.0						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.	
allowed values:	-999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).	
allowed values:	-999999.0						
Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.	
allowed values:	Contaminated Potable		No Information Treatable			Nonpotable	Other
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.	
allowed values:	Alkaline Mineral Saline		Brackish No Information Seawater			Brine Not Applicable	Fresh Other
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.	
allowed values:	Agricultural Irrigation Institutional No Information Sanitary Domestic		Commercial Livestock Other			Domestic Irrigation Military Power Generation	Industrial Municipal Recreational
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.	

allowed values: -999999.0

Feature StorageTankAON (Area)

New ☒ Storage Tank Area of Numerous

Area of numerous containers used for the storage of liquids and/or gases that are not supported by towers.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights. <i>allowed values:</i> <i>False</i> <i>No Information</i> <i>True</i>
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature. <i>allowed values:</i> <i>-999999.0</i>
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic. <i>allowed values:</i> <i>-999999.0</i>
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack). <i>allowed values:</i> <i>noInformation</i>
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography. <i>allowed values:</i> <i>[-999999, -999999]</i>
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water. <i>allowed values:</i> <i>-999999.0</i>
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density. <i>allowed values:</i> <i>-999999.0</i>
Containment Berm Present	1	No Information	Boolean	Unitless	0	An indication that a facility (for example: a storage tank, a drum storage area, or a liquid transfer area) is surrounded by an embankment or wall that provides a barrier to retain liquid (for example: leaked fuel oil). [Description] The embankment or wall is typically part of a spill containment system that may additionally provide fire protection, product recovery and/or process isolation. <i>allowed values:</i> <i>False</i> <i>No Information</i> <i>True</i>
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public). <i>allowed values:</i> Civilian Other Joint Military and Civilian Private Military Public No Information
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life. <i>allowed values:</i> <i>-999999.0</i>
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance. <i>allowed values:</i> <i>noInformation</i>
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures. <i>allowed values:</i> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational
New Feature Code	1	NU070	CONSTRAINED_STRING	Unitless	5	Feature Code <i>allowed values:</i> <i>NU070</i>
Feature Count	1	-999999	Integer	Unitless	0	The number of features of the same type within a defined region. [Description] May be used to indicate the number of features actually present in near proximity to each other although only one representative feature is collected. For example, the number of adjacent pipelines.

<i>allowed values:</i> -999999							
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation							
	Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (":"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information							
	Geographic Name Information : Geographic Name Type	2	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original							
<i>allowed values:</i> Historical Original No Information Unverified Transliterated							
<i>allowed values:</i> Historical Transliterated Other Variant Original							
<i>allowed values:</i> Native Original Provisional Variant Transliterated							
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0							
	Height of Object	1	-999999.0	REAL	metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0							
	Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
<i>allowed values:</i> False							
<i>allowed values:</i> No Information							
<i>allowed values:</i> True							
	Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.

allowed values: No Information

Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
---	---	----------------	--------	----------	----	--

allowed values: No Information

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
---------------------	---	----------------	---------	----------	---	---

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
---	---	---	----------	----------	----	--

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
--	---	-----------	------	----------------------	---	--

allowed values: *-999999.0*

Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
-----------	---	----------------	---------	----------	---	---

allowed values: *False*

Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
--	---	-----------	------	----------------	---	--

allowed values: *-999999.0*

Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
---	---	-----------	------	----------------------	---	---

allowed values: *-999999.0*

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Vertical Construction Material		3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).	
allowed values:	Aluminum			Concrete			Iron	Masonry
	Metal			No Information			Other	Prestressed Concrete
	Reinforced Concrete			Steel				

Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
---------------------------------	---	---------------	----------------	----------	----	--

allowed values: *noInformation*

Volume	1	-999999.0	REAL	cubicMetre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable No Information Treatable Nonpotable Other						
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline Brackish No Information Seawater Brine Not Applicable Fresh Other						
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic Commercial Livestock Other Domestic Irrigation Military Power Generation Industrial Municipal Recreational						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature StormDrain (Point)New ☐ Storm Drain**A collector opening into a pipe or channel to allow the removal of excess runoff water or in some cases sewage. [Description] In civil engineering terms, a drop inlet.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).

allowed values: noInformation

New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	AQ114	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AQ114						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.

Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMCClassificationAll

allowed values: [U](#)

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
---	---	----------------	----------	----------	----	---

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	---

allowed values: noInformation

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Administrative Division	1	No Information	Enumeration	Unitless	0	The nature of an administrative division as established by an international body (for example: the United Nations), a supranational body (for example: the European Union), a State (for example: France), or a similar entity (for example: the Vatican) or organization (for example: the International Hydrographic Organization).
<i>allowed values:</i>						International or Supranational Subnational National No Information Other
Angle of Orientation	1	-999999.0	Real	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i>						-999999.0
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i>						noInformation
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i>						[-999999, -999999]
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i>						Civilian No Information Tribal Joint Military and Civilian Other Military Private Municipal Public
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i>						noInformation
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i>						No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AQ162	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i>						AQ162
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i>						noInformation
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i>						No Information
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMCClassificationAll
<i>allowed values:</i> U						

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Concrete Other			Iron Steel			Metal Treated Timber No Information Wood
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID

Feature StructuralPile (Point)

New ☐ Structural Pile

A long pile (for example: a heavy timber or section of steel, wood, or concrete) forced into the earth that may serve as a support (for example: for a pier) or as a free standing pole within a marine environment.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	BD100	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BD100						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

New	Feature Code	1	AM060	CONSTRAINED_ STRING	Unitless	5	Feature Code
		<i>allowed values:</i> AM060					
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
		<i>allowed values:</i> noInformation					
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
		<i>allowed values:</i> No Information					
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
		<i>allowed values:</i> No Information					
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
		<i>allowed values:</i> Conventional Native Transliterated Unverified Original					
	Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The intended use(s) of a designated hazard protection shelter based on the kind of emergency. [Description] Hazard shelters may be located inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
		<i>allowed values:</i> Bomb Shelter Storm Shelter					
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
		<i>allowed values:</i> -999999.0					
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
		<i>allowed values:</i> -999999.0					
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
		<i>allowed values:</i> -999999.0					
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
		<i>allowed values:</i> No Information					

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact Damaged No Information Destroyed Unmaintained Dismantled						
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Ammunition Other Chemical Petrol Explosive Radioactive Material No Information Uranium						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed (' ' and ') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

allowed values: noInformation

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature SurfaceBunker (Point)New ☐ Surface Bunker

A surface structure that may be covered and/or surrounded with earth and is resistant to ordnance. [Description] Used, for example, for storage and/or aircraft protection.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	Real	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).

<i>allowed values:</i> Civilian Other		Joint Military and Civilian Private		Military Public		No Information	
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation							
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational		Operational	
New	Feature Code	1	AM060	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i> AM060							
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation							
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Feature **SurveyPoint (Point)**New ☒ **Survey Point**

A location where horizontal and/or vertical control has been determined by surveying methods. [Description] Surveys are used to establish positions (horizontal or vertical) of selected points. The points are then used to reference other survey observations or measurements.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Base Elevation	1	-999999.0	REAL	metre	0	The vertical distance from a specified vertical datum to the terrain surface of or at the base of the feature. [Description] If the feature is not supported above the surface by another feature then the base of the feature is usually located at ground or water level on the downhill/downstream side. For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). In the case of a survey marker (monument) this is usually the elevation assigned to the marker (monument).

allowed values: *-999999.0*

Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
--------------------------------	---	---------------	----------------	----------	----	---

	allowed values: <i>noInformation</i>						
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	allowed values: <i>[-999999, -999999]</i>						
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	allowed values: Civilian Other			Joint Military and Civilian Private			Military Public No Information
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	allowed values: <i>noInformation</i>						
New	Feature Code	1	ZB050	CONSTRAINED_STRING	Unitless	5	Feature Code
	allowed values: <i>ZB050</i>						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	allowed values: <i>noInformation</i>						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	allowed values: <i>No Information</i>						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencl . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	allowed values: Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	allowed values: <i>No Information</i>						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	allowed values: <i>No Information</i>						
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	allowed values: Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
---	---	---	----------	----------	----	--

allowed values: U

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
---	---	----------------	----------	----------	----	--

allowed values: No Information

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
---	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
--	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
---	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	--

allowed values: noInformation

New Survey Point Type	1	No Information	Enumeration	Unitless	0	The type of a survey point based on the purpose for which it is established.
<div> <i>allowed values:</i> Astronomic Position Geodetic Point Other Benchmark Gravity Point Theodolite Station Cadastral Control Point Magnetic Station Tidal Benchmark Camera Station No Information Transit Station </div>						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature Swamp (Area)New ☐ Swamp

A seasonally flooded, poorly drained wetland with more woody plants than a marsh and better drainage than a bog. [Description] It is covered with water all or most of the year, and accumulating dead vegetation does not rapidly decay. It can exist on flat-lying areas created by certain geomorphic environments. The vegetation mainly consists of hydrophytic trees and/or scrubs whose roots are adapted to wet conditions, with an open to very dense canopy closure. A subtype of the more generalized wetland.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Average Water Depth	1	[-999999.0, -999999.0]	Real_Interval	Metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999.0, -999999.0]						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Bottom Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing the bottom of a body of water.
<i>allowed values:</i> Bedrock Other Sand and Gravel			Clay and Silt Peat Sand over Mud			Gravel and Cobble Rocks and Boulders Silty Sands No Information Sand Soil
Canopy Cover	1	-999999.0	REAL	percent	0	The fraction of canopy cover within a defined area during the season of maximum foliage. [Description] The canopy is formed by the upper branches of the trees in a forest forming a more or less continuous layer.
<i>allowed values:</i> -999999.0						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						

Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	ED020	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> ED020						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Foliage Type	1	No Information	Enumeration	Unitless	0	The predominant foliage type of the vegetation.
<i>allowed values:</i> Deciduous Other			Evergreen			Mixed No Information
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999.0						

Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry Perennial			<i>Ephemeral</i>			Intermittent No Information
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Milligrams per Litre	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Predominant Vegetation Height	1	-999999.0	REAL	metre	0	The predominant height (the height of at least 50 percent) of the vegetation.
<i>allowed values:</i> -999999.0						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. <u>allowed values:</u> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<u>allowed values:</u> noInformation						
Stem Diameter	1	[-999999.0, -999999.0]	REAL_Interval	Decimetre	0	The average diameter of the tree trunks in an area, measured at a height of approximately 1.5 metres or 4.5 feet on the high side (if on a hillside) above the surface of the ground. [Description] Commonly referred to as the 'diameter at breast height' (dbh). For trees up to 2 metres high, the stem diameter is measured at the mid-point between the ground and the stem tip.
<u>allowed values:</u> [-999999.0, -999999.0]						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<u>allowed values:</u> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<u>allowed values:</u> -999999.0						
Tide Influenced	1	No Information	Boolean	Unitless	0	An indication that a waterbody is affected by the tide.
<u>allowed values:</u> False No Information True						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<u>allowed values:</u> -999999.0						
Tree Spacing	1	[-999999.0, -999999.0]	REAL_INTERVAL	Unitless	0	The average tree spacing between trees in a stand, determined from centre to centre of adjacent trees.
<u>allowed values:</u> [-999999.0, -999999.0]						
Undergrowth Density	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The fraction of land within a defined area that is covered by undergrowth (for example: scrub, brush, and/or bush).
<u>allowed values:</u> [-999999.0, -999999.0]						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

allowed values: noInformationallowed values: pimGUID

Vegetation Species	3	No Information	Enumeration	Unitless	0	The predominant species of a tract of vegetation.
<i>allowed values:</i> Mangrove Swamp Cypress Nipa No Information Other						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable No Information Treatable Nonpotable Other						
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline Brackish No Information Seawater Brine Not Applicable Fresh Other						
Water Resource Information : Water Use	1	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic Commercial Livestock Other Domestic Irrigation Military Power Generation Industrial Municipal Recreational						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	FC177	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> FC177						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information						
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original Historical Original <i>No Information</i> Unverified Transliterated Historical Transliterated <i>Other</i> Variant Original Native Original Provisional Variant Transliterated						

Hydrographic Depth	1	-999999.0	REAL	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISOwnerProducer
<i>allowed values:</i> noInformation						
Hydrographic Depth : Sounding Metadata : Sounding Datum	1	No Information	Enumeration	Unitless	0	The tidal datum to which soundings and drying heights are referenced. [Description] It is usually taken to correspond to a low water stage of the tide.

allowed values:	Approximate Lowest Astronomical Tide Approximate Mean Sea Level High Water Springs Highest High Water Local Datum Lower Low Water Large Tide Mean High Water Mean Higher High Water Springs Mean Lower Low Water Mean Water Level No Information	Approximate Mean Low Water Chart Datum (Unspecified) Higher High Water Indian Spring High Water Low Water Lowest Astronomical Tide Mean High Water Neaps Mean Low Water Mean Lower Low Water Springs Neap Tide Other	Approximate Mean Low Water Springs Equinoctial Spring Low Water Higher High Water Large Tide Indian Spring Low Water Low Water Springs Lowest Low Water Mean High Water Springs Mean Low Water Neaps Mean Sea Level Nearly Highest High Water Spring Tide	Approximate Mean Lower Low Water High Water Highest Astronomical Tide International Great Lakes Datum 1985 Lower Low Water Lowest Low Water Springs Mean Higher High Water Mean Low Water Springs Mean Tide Level Nearly Lowest Low Water		
Hydrographic Depth : Sounding Metadata : Sounding Datum Name	1	No Information	String	Unitless	80	The name of the tidal datum to which soundings and drying heights are referenced. [Description] Used when the sounding datum is known but not specified using Attribute: 'Sounding Datum'.
allowed values:	No Information					
Hydrographic Depth : Sounding Metadata : Sounding Velocity Correction Method	1	No Information	Enumeration	Unitless	0	The method of correction that has been used to correct a sounding velocity instrument reading to obtain the correct depth.
allowed values:	Mathews Tables Sound Velocity Meter	No Information Sounder 1500 Calibrated				Not Applicable Sounder 4800 Calibrated Other Sounder Other Calibrated
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
allowed values:	noInformation					
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
allowed values:	noInformation

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						

New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	AK170	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AK170						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.

	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<i>allowed values:</i> Dry Perennial			Ephemeral			Intermittent No Information
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<i>allowed values:</i> -999999.0						

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Milligrams per Litre	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Dismantled Unmaintained
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
<i>allowed values:</i> Above Surface Below Waterbody Surface			Above Waterbody Bottom No Information			Below Ground Surface On Surface Below Waterbody Bottom On Waterbody Bottom
Volume	1	-999999.0	REAL	cubicMetre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline			Brackish No Information Seawater			Brine Not Applicable Fresh Other

Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
allowed values:	Agricultural Irrigation		Commercial		Domestic Irrigation	
	Institutional		Livestock		Industrial	
	No Information		Other		Military	
	Sanitary Domestic				Power Generation	
					Municipal	
					Recreational	
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999.0

Feature SwimmingPool (Point)

New ☐ Swimming Pool

A man-made pool used for swimming outdoors.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
allowed values: No Information						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
allowed values: -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
allowed values: -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
allowed values: noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
allowed values: [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
allowed values: -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.

<i>allowed values:</i> -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other Joint Military and Civilian Private Military Public No Information						
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN ⁻ . These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational						
New Feature Code	1	AK170	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AK170						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information Other						
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original Historical Original No Information Unverified Transliterated Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated						
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						

Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry Perennial						
<i>Ephemeral</i> <i>Intermittent</i> <i>No Information</i>						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False <i>No Information</i> <i>True</i>						
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Milligrams per Litre	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.

<u>allowed values:</u> <i>noInformation</i>						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<u>allowed values:</u> <i>noInformation</i>						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<u>allowed values:</u> <i>-999999.0</i>						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<u>allowed values:</u> <i>-999999.0</i>						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<u>allowed values:</u> <i>-999999.0</i>						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<u>allowed values:</u> <i>noInformation</i>						
<u>allowed values:</u> <i>pimGUID</i>						
Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
<u>allowed values:</u> <div> <div>Above Surface</div> <div>Below Waterbody Surface</div> </div> <div> <div>Above Waterbody Bottom</div> <div>No Information</div> </div> <div> <div>Below Ground Surface</div> <div>On Surface</div> </div> <div> <div>Below Waterbody Bottom</div> <div>On Waterbody Bottom</div> </div>						
Volume	1	-999999.0	REAL	cubicMetre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<u>allowed values:</u> <i>-999999.0</i>						

Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline Brackish No Information Seawater Brine Not Applicable Fresh Other						
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic Commercial Livestock Other Domestic Irrigation Military Power Generation Industrial Municipal Recreational						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature SwimmingPoolAON (Area)

New ☒ Swimming Pool Area of Numerous

Area of numerous man-made pools used for swimming outdoors.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).

allowed values: noInformation

New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
	Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<i>allowed values:</i> -999999.0						
	Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<i>allowed values:</i> -999999.0						
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
	Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999.0						
	Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
	<i>allowed values:</i> -999999.0						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	NU170	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> NU170						
	Feature Count	1	-999999	Integer	Unitless	0	The number of features of the same type within a defined region. [Description] May be used to indicate the number of features actually present in near proximity to each other although only one representative feature is collected. For example, the number of adjacent pipelines.
	<i>allowed values:</i> -999999						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<u>allowed values:</u> Dry Perennial			Ephemeral			Intermittent No Information
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information			True
	Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<u>allowed values:</u> -999999.0						
	Water Resource Information : pH	1	-999999.0	Real	Milligrams per Litre	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<u>allowed values:</u> -999999.0						

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMNonIC
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMOwnerProducer
<i>allowed values:</i>	noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed (' ' and ') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> <i>noInformation</i> <i>allowed values:</i> Canal No Information Other Railway Road						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature TankCrossing (Point) New ☒ Tank Crossing

A crossing or turn pad where tracked military vehicles cross over other transportation elements. [Description] Typically a hardened area minimizing the impact of tracked vehicles on the underlying transportation feature (for example: road or railway). May be used as a crossing over other transportation, or a turn pad within a system of tank trails.

Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i>	Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated	
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i>	-999999.0					
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i>	-999999.0					
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i>	-999999.0					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i>	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i>	No Information					

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Biodiesel Liquefied Petroleum Gas (LPG) Petroleum			Chemical No Information			Gas Other Liquefied Natural Gas (LNG) Petrol
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	---

allowed values: noInformation

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
--------------------------	---	---------------	----------------	----------	-----	--

Feature TankFarm (Point)

 Tank Farm

A tract of land occupied by large-capacity tanks in which petroleum, natural gas, or liquid petrochemicals are stored. [Description] The tanks are usually round, constructed from metal plates, and separated from each other by berms intended to contain any leakage.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.

allowed values: -999999.0

	Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
	<i>allowed values:</i> noInformation						
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	AM071	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AM071						
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
	<i>allowed values:</i> Chemical Manufacture Petroleum Refining Transfer Hub			No Information Pipeline Transport Utilities			Other Power Generation Petroleum and/or Gas Extraction Road Freight Transport
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation

New Feature Code	1	AP055	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AP055						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.

<i>allowed values:</i> No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact Damaged No Information Destroyed Unmaintained Dismantled						
Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).
<i>allowed values:</i> Depressed Level No Information Raised						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMOwnerProducer
<i>allowed values:</i> noInformation						
Route Designation	3	No Information	String	Unitless	24	The official type(s) and/or designation(s) assigned to a route. [Description] A road network may be identified in accordance with a specified typing scheme (for example: based the nature of service that it is intended to provide) and numbering scheme (for example: composed of a prefix indicating an administrative region and then a number).
<i>allowed values:</i> No Information						
Route Pavement Information : Route Surface Composition	1	No Information	Enumeration	Unitless	0	The composition(s) of a durable surface (for example: a pavement) intended to sustain ground traffic (for example: vehicular traffic or foot traffic). [Description] Depending on the traffic situation (for example: on a floor, in a courtyard, or on a road) different compositions may be used, however in general such surfaces are composed of pieces of a hard material fitted closely together (for example: cobble-stone or brick) or of an undivided hard layer (for example: concrete) so as to give a compact, uniform, and smooth surface.
<i>allowed values:</i> Aggregate Brick Flexible Pavement No Information Stabilized Earth Asphalt Cobble-stone Ice Other Unimproved Asphalt over Concrete Concrete Macadam Rigid Pavement Wood Bound Surface Corduroy Metal Snow Wood Plank						

New Sinuosity	1	-999999.0	Real	Metres	0	The actual path length divided by the shortest path length of a section of the road or trail allowing for estimates of speed given the curves of the roadway. [Description] This allows for routing algorithms to more precisely estimate the speed.
<u>allowed values:</u> -999999.0						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<u>allowed values:</u> noInformation						
Speed Limit (KPH)	1	-999999.0	Real	Kilometre per Hour	0	The maximum vehicle speed legally permitted, expressed in kilometres per hour.
<u>allowed values:</u> -999999.0						
Speed Limit (MPH)	1	-999999.0	Real	Statute Mile per Hour	0	The maximum vehicle speed legally permitted, expressed in miles per hour.
<u>allowed values:</u> -999999.0						
Supported by Bridge Span	1	No Information	Boolean	Unitless	0	The object is at least partially supported by, or passes across, a bridge span. [Description] For example, an aqueduct carried across a valley by one or more bridge spans.
<u>allowed values:</u> False No Information True						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<u>allowed values:</u> noInformation						
<u>allowed values:</u> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Aerodrome Pavement Information : Aerodrome Movement Area Surface Composition	3	No Information	Enumeration	Unitless	0	The type of the predominant material of which a surface of the movement area is composed. [Description] Example surfaces include: asphalt, concrete, or grass.
<i>allowed values:</i> Asphalt Clay Gravel Macadam Other Stone			Asphalt Over Concrete Concrete Ice Membrane Pierced Steel Planking Water			Bituminous Mix Coral Landing Mat No Information Sand Wood Brick Earthen Laterite Non-bituminous Mix Snow
Aerodrome Pavement Information : Aerodrome Movement Area Surface Preparation Method	3	No Information	Enumeration	Unitless	0	The preparation technique(s) applied to a surface composition.
<i>allowed values:</i> Aggregate Seal Coat No Information Rolled			Graded Oiled Rubberized Seal Coat			Grass Other Grooved Porous Friction Course
Aerodrome Pavement Information : Aerodrome Pavement Functional Status	1	No Information	Enumeration	Unitless	0	The functional status of the pavement of an aerodrome movement area. [Description] An aerodrome movement area is that part of an aerodrome to be used for aircraft movement operations, consisting of the manoeuvring area and the apron(s).
<i>allowed values:</i> Excellent Good Estimated Under Construction			Fair No Information Unserviceable			Fair Estimated Poor Good Poor Estimated
Aerodrome Surface Status	1	No Information	Enumeration	Unitless	0	The operational status of an aerodrome movement area, as a category. [Description] For example: serviceable, unserviceable, closed, or work-in-progress.
<i>allowed values:</i> Closed Work in Progress			No Information			Open Parked or Disabled Aircraft
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Deck Level	1	-999999	Integer	unitless	0	The relative level of a deck within a set of vertically stacked decks, one over another, in a transportation structure (for example: on a bridge or in a tunnel). [Description] The lowest deck is numbered '1' and the remaining decks are numbered in ascending order (bottom to top) with the uppermost deck being assigned the highest value. When no deck is present, the deck level is zero.
<i>allowed values:</i> -999999						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						

Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i>	No Information		Non-operational		Operational	
	Partially Operational		Planned		Temporarily Non-operational	
New Feature Code	1	GB075	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i>	GB075					
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i>	noInformation					
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i>	No Information					
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i>	No Information		Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i>	Conventional		Historical Original		Historical Transliterated	
	Native Transliterated		No Information		Other	
	Unverified Original		Unverified Transliterated		Variant Original	
					Native Original	
					Provisional	
					Variant Transliterated	
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i>	-999999.0					
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i>	-999999.0					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i>	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i>	No Information					
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.

<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained	Dismantled	
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll		
<i>allowed values:</i> U								
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode		
<i>allowed values:</i> No Information			Other					
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem		
<i>allowed values:</i> noInformation								
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC		
<i>allowed values:</i> noInformation								
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer		
<i>allowed values:</i> noInformation								
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.		
<i>allowed values:</i> noInformation								
Supported by Bridge Span	1	No Information	Boolean	Unitless	0	The object is at least partially supported by, or passes across, a bridge span. [Description] For example, an aqueduct carried across a valley by one or more bridge spans.		
<i>allowed values:</i> False			No Information			True		
Taxiway Type	1	No Information	Enumeration	Unitless	0	The type of an aircraft taxiway based on its connectivity to other aerodrome ground surfaces.		
<i>allowed values:</i>	Air Taxiway Helicopter Ground Taxiway No Information Rapid Exit and/or Turnoff Taxiway		Aircraft Stand Taxilane Lead-in Taxilane Other Stub Taxiway			Apron Taxiway Lead-out Taxilane Parallel Taxiway Turnaround Taxiway	Dispersal Loop Perimeter	

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

allowed values: pimGUID

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

allowed values: *noInformation**allowed values:* *pimGUID*

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature TestSite (Area)

New ☐ Test Site

A site for the testing of technical products and equipment.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	FA100	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> FA100						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed (' ' and ') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0

Feature Thicket (Area)New ☐ Thicket

A tract covered mainly by low-growing, uncultured, woody plants that are thickly tangled together. [Description] For example, covered by brushwood and/or stunted trees. The predominant height may be up to 6-8 metres.

	Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
	Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
	<i>allowed values:</i> -999999.0						
	Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
	<i>allowed values:</i> noInformation						
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
New	Feature Code	1	EB020	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> EB020						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			

Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original
						Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Predominant Vegetation Height	1	-999999.0	REAL	metre	0	The predominant height (the height of at least 50 percent) of the vegetation.
<i>allowed values:</i> -999999.0						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMNonIC
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Undergrowth Density	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The fraction of land within a defined area that is covered by undergrowth (for example: scrub, brush, and/or bush).
<i>allowed values:</i> [-999999.0, -999999.0]						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vegetation Trafficability Impact	1	-999999.0	Real	Percent	0	The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
<i>allowed values:</i> -999999.0						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Bottom Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing the bottom of a body of water.

							<div> <div>allowed values:</div> <div> Bedrock Gravel and Cobble Paved Sand Soil </div> </div> <div> <div></div> <div> Clay and Silt Masonry Peat Sand and Gravel </div> </div> <div> <div></div> <div> Concrete No Information Reinforced Concrete Sand over Mud </div> </div> <div> <div></div> <div> Coral Other Rocks and Boulders Silty Sands </div> </div>
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
							<div> <div>allowed values:</div> <div>[-999999, -999999]</div> </div>
	Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
							<div> <div>allowed values:</div> <div>-999999.0</div> </div>
	Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
							<div> <div>allowed values:</div> <div>-999999.0</div> </div>
	Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
							<div> <div>allowed values:</div> <div>-999999.0</div> </div>
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
							<div> <div>allowed values:</div> <div>noInformation</div> </div>
New	Feature Code	1	BA040	CONSTRAINED_STRING	Unitless	5	Feature Code
							<div> <div>allowed values:</div> <div>BA040</div> </div>
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
							<div> <div>allowed values:</div> <div>noInformation</div> </div>
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
							<div> <div>allowed values:</div> <div>No Information</div> </div>
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISNonIC
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline			Brackish No Information Seawater		Brine Not Applicable	Fresh Other

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Tomb (Area)

New ☐ Tomb

A structure within which a corpse is entombed. [Description] It is often a building-like structure that may be partly or wholly underground (except for its entrance), but may be a simple enclosure cut into solid rock (for example: into a cliff face or inside of a cave). It may contain a single corpse or a related group (for example: a family) may be entombed together.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0

	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information						
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original		
					Native Original Provisional Variant Transliterated		
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Height of Object	1	-999999.0	REAL	metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						
	Least Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling. The least depth below surface level may be located at ground or water level and therefore have a value of zero (for example: an opencast extraction mine, a terrain depression or a lake). For depths defined with respect to a time-varying water level, consideration should be given to the use of Attribute: 'Hydrographic Depth'.
	<i>allowed values:</i> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

	Surface Vault					

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
--------------------------	---	---------------	----------------	----------	-----	--

allowed values: noInformation

allowed values: pimGUID

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Tomb (Point)

New ☐ Tomb

A structure within which a corpse is entombed. [Description] It is often a building-like structure that may be partly or wholly underground (except for its entrance), but may be a simple enclosure cut into solid rock (for example: into a cliff face or inside of a cave). It may contain a single corpse or a related group (for example: a family) may be entombed together.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	AL036	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL036						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			

Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original
						Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Height of Object	1	-999999.0	REAL	metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Least Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling. The least depth below surface level may be located at ground or water level and therefore have a value of zero (for example: an opencast extraction mine, a terrain depression or a lake). For depths defined with respect to a time-varying water level, consideration should be given to the use of Attribute: 'Hydrographic Depth'.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained
Religious Information : Religious Designation	1	No Information	Enumeration	Unitless	0	A designation denoting a religion or system of belief.

allowed values:	Buddhism Islam No Information Roman Catholic		Chaldean Judaism Orthodox Shia		Christian <i>Mixed and/or No Designation</i> Other Shinto	Hinduism Nestorian Protestant Sunni
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
allowed values: U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
allowed values: No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
allowed values: noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
allowed values: noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
allowed values: noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Guyed	1	No Information	Boolean	Unitless	0	An indication that an object is guided, secured, or steadied by guy wires.
	<i>allowed values:</i> False			No Information			True
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Height of Object	1	-999999.0	REAL	metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i> Conical Other			Domed Pitched			Flat Pyramidal No Information Semi-cylindrical
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
<i>allowed values:</i> False			No Information			True
Tower Shape	1	No Information	Enumeration	Unitless	0	The general shape and/or structure of a tower.
<i>allowed values:</i> Mast Truss			No Information Tubular			Other Pole
Tower Type	3	No Information	Enumeration	Unitless	0	The type of a tower based on its intended use(s).
<i>allowed values:</i> Drop Tower Lookout Tower Solar Power Tower			Fire Tower No Information Telecommunication Tower			Guard Tower Observation Tower Industrial Tower Other
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Tower (Point)

New ☐ Tower

A relatively tall, narrow structure that may either stand alone or may form part of another structure. [Description] Usually of a square, circular, or rectangular cross-section.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
allowed values: False			No Information			True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
allowed values: -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
allowed values: -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
allowed values: noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
allowed values: [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
allowed values: Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
allowed values: noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.

<i>allowed values:</i> No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational		Operational	
New	Feature Code	1	AL241	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL241							
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation							
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc. [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information							
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original		Native Original Provisional Variant Transliterated	
	Guyed	1	No Information	Boolean	Unitless	0	An indication that an object is guided, secured, or steadied by guy wires.
<i>allowed values:</i> False							
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0							
	Height of Object	1	-999999.0	REAL	metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
<i>allowed values:</i> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0							

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information		True	
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information		Destroyed Unmaintained Dismantled	
Pylon Configuration	1	No Information	Enumeration	Unitless	0	The configuration of a pylon or pole.
<i>allowed values:</i> 'A' Other			'H' 'T'		'I' 'Y' No Information	
Pylon Material	1	No Information	Enumeration	Unitless	0	The primary type of material composing a pylon. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Aluminum Masonry Steel			Concrete Metal Wood		Fibreglass No Information Iron Other	
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<u>allowed values:</u> noInformation						
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<u>allowed values:</u> Conical Other			Domed Pitched			Flat Pyramidal No Information Semi-cylindrical
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<u>allowed values:</u> noInformation						
Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
<u>allowed values:</u> False			No Information			True
Tower Shape	1	No Information	Enumeration	Unitless	0	The general shape and/or structure of a tower.
<u>allowed values:</u> Mast Truss			No Information Tubular			Other Pole
Tower Type	3	No Information	Enumeration	Unitless	0	The type of a tower based on its intended use(s).
<u>allowed values:</u> Drop Tower Lookout Tower Solar Power Tower			Fire Tower No Information Telecommunication Tower			Guard Tower Observation Tower Industrial Tower Other
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<u>allowed values:</u> noInformation						
<u>allowed values:</u> pimGUID						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<u>allowed values:</u> noInformation						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<u>allowed values:</u> -999999.0						
Wireless Telecommunication Information : Wireless Telecommunication Type	1	No Information	Enumeration	Unitless	0	The type of a wireless telecommunication service based on the mechanism(s) of transmission and/or the nature of the communication(s) supported. [Description] For example, radio broadcast or mobile phone service.

allowed values: Cellular Phone

Feature TrafficLight (Point)

New ☐ Traffic Light

A set of automatic lights (usually red, amber, and green) for controlling road traffic, especially at a road intersection. [Description] Usually attached to tall poles or suspended from overhead cables.

	Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
	Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
	allowed values: <i>noInformation</i>						
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	allowed values: <i>[-999999, -999999]</i>						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	allowed values: <i>noInformation</i>						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	allowed values: No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	AQ160	CONSTRAINED_STRING	Unitless	5	Feature Code
	allowed values: <i>AQ160</i>						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	allowed values: <i>noInformation</i>						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	allowed values: No Information						

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMCClassificationAll
	<i>allowed values:</i> U						

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature TrafficSeparationScheme (Line)

New ☐ Traffic Separation Scheme

A maritime routing measure that separates opposing streams of traffic by appropriate means. [Description] For example, traffic lanes and traffic circles. Often referred to by its acronym, TSS.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
-----------	-------------	---------	-----------	-------	--------	----------------------

	Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
	<i>allowed values:</i> noInformation						
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> No Information			Other			Private Public
	Direction of Flow	1	-999999.0	REAL	Arc Degree	0	The bearing of movement or direction of the flow.
	<i>allowed values:</i> -999999.0						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
New	Feature Code	1	FC041	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> FC041						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	IMO Adopted	1	No Information	Boolean	Unitless	0	An indication that a Traffic Separation Scheme (TSS) has been adopted by the International Maritime Organization (IMO).
	<i>allowed values:</i> False			No Information			True
	Length	1	-999999.0	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Maritime Navigation Marked	1	No Information	Boolean	Unitless	0	An indication that a feature is significant to maritime safety of navigation and is marked (for example: by a light or beacon) by a maritime-specific navigational aid. [Description] Mariners may also use other prominent features (for example: rotating aeronautical beacons or lighted structures) for informal navigational purposes.
	<i>allowed values:</i> False			No Information			True

Maritime Traffic Separation Scheme Component	1	No Information	Enumeration	Unitless	0	The type of a component of a maritime Traffic Separation Scheme (TSS) based on its purpose. [Description] A TSS is a routing scheme whose intent is to reduce the risk of collision in congested and/or converging areas by separating traffic moving in opposite, or nearly opposite, directions.
<i>allowed values:</i> Boundary Lane Part Outbound Lane Separation Zone			Crossing Line Point			Inbound Lane No Information Precautionary Area Inshore Traffic Zone Other Roundabout
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

TSS-associated Aids to Navigation	1	No Information	String	Unitless	2E+09	A description of marked navigational aids that are either associated with or supporting a maritime Traffic Separation Scheme (TSS).
-----------------------------------	---	----------------	--------	----------	-------	---

allowed values: *No Information*

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Contained within Tunnel	1	No Information	Boolean	Unitless	0	The object is at least partially located within, or passes through, a tunnel. [Description] For example, a canal passing through a tunnel.
<i>allowed values:</i> False			No Information			True
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Deck Level	1	-999999	Integer	unitless	0	The relative level of a deck within a set of vertically stacked decks, one over another, in a transportation structure (for example: on a bridge or in a tunnel). [Description] The lowest deck is numbered '1' and the remaining decks are numbered in ascending order (bottom to top) with the uppermost deck being assigned the highest value. When no deck is present, the deck level is zero.
<i>allowed values:</i> -999999						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AP050	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AP050						

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<u>allowed values:</u> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information			True
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<u>allowed values:</u> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
	Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).
	<u>allowed values:</u> Depressed			Level			No Information Raised

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Route Pavement Information : Road Weather Restriction	1	No Information	Enumeration	Unitless	0	The type of weather conditions under which a road is usable.
<i>allowed values:</i> All-weather No Information			Closed in Winter Other			Fair-weather Winter Only Limited All-weather
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Supported by Bridge Span	1	No Information	Boolean	Unitless	0	The object is at least partially supported by, or passes across, a bridge span. [Description] For example, an aqueduct carried across a valley by one or more bridge spans.
<i>allowed values:</i> False			No Information			True
Through Route	1	No Information	Boolean	Unitless	0	An indication that a ground transportation route (for example: road, cart track or trail) is the most direct way through (both into and then out of) a built-up area or populated place. [Description] Routes may branch off of the main through route providing an alternate through route out of the built-up area or populated place. The direct or alternate ways through a built-up area or populated place may consist of the quickest or shortest route. A through route may have devices (for example: traffic lights) to control traffic flow.
<i>allowed values:</i> False			No Information			True

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

On Surface

On Waterbody Bottom

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact

Destroyed						
Dismantled						
No Information						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

allowed values: pimGUID

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

	<i>allowed values:</i> CBRNE Civilian Support Emergency Operations Law Enforcement Public Order Sports Centre			Civil Intelligence Emergency Relief Services Meeting Place Rescue and Paramedical Services Vocational Education			Club Firefighting No Information Safety Defence Activities Government Other Shooting Range
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other

	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.

allowed values: -999999.0

Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
-------------------	---	-----------	------	-------	---	---

allowed values: -999999.0

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	---

allowed values: *noInformation*

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

Feature TransportationBlock (Area)

New ☐ Transportation Block

A substantial semi-permanent assemblage of material, usually in the form of concrete blocks and/or cylinders, positioned alongside or above a land transportation route, ready to be activated as a potential barrier. [Description] For example, a rolling block is positioned alongside the route and a drop gate is positioned above the route.

Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Transportation Block Type	1	No Information	Enumeration	Unitless	0	The type of a transportation block based on its method of action. [Description] May be used as a means of subtyping Feature: 'Transportation Block'.
<i>allowed values:</i> Drop Gate			No Information			Rolling Block
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> Canal Railway			No Information Road			Pedestrian

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

allowed values: pimGUID

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature TransportationBlock (Point)

New ☐ Transportation Block

A substantial semi-permanent assemblage of material, usually in the form of concrete blocks and/or cylinders, positioned alongside or above a land transportation route, ready to be activated as a potential barrier. [Description] For example, a rolling block is positioned alongside the route and a drop gate is positioned above the route.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	Real	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.

allowed values: -999999.0

Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.

<i>allowed values:</i> AQ068						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information Other						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact Damaged No Information Destroyed Unmaintained Dismantled						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation

Height Above Surface Level 1 -999999.0 REAL metre 0 The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.

allowed values: -999999.0

Highest Elevation 1 -999999.0 REAL metre 0 The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.

allowed values: -999999.0

Length 1 -999999.0 REAL metre 0 The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

allowed values: -999999.0

Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
<i>allowed values:</i> False			No Information			True
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Multi-unit Building	1	No Information	Boolean	Unitless	0	An indication that a building is divided into two or more distinct sets of rooms or other interior spaces that are internally fully-connected while being separated from each other and common areas by controlled access point(s) (for example: lockable doors) that enable physical privacy and security for its occupants. [Description] For example, an apartment building consisting of multiple self-contained residences individually including spaces for personal activities, cooking, eating, sleeping, and (usually) a private bathroom, or an office building housing multiple commercial establishments individually including spaces for reception, meetings, single or open-plan work areas, as well as individual or common-use bathrooms or cafeterias.
<i>allowed values:</i> False			No Information			True
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
<i>allowed values:</i> False			No Information			True
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> Aeronautical Canal Railway			Automotive No Information Road			Bus Other Truck Cableway Pedestrian Underground Railway
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0

Feature TransportationStation (Point)New ☐ Transportation Station

A station, usually having associated structures, which serves as a place for disembarking or taking on passengers or freight along a transportation route. [Description]
Transportation routes may include railway, pipeline, road, water or air. Transportation stations may have associated structures for vehicle parking or ticket sales.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Attached Building	1	No Information	Boolean	Unitless	0	An indication that a building is physically contiguous (for example: shares a common wall) with one or more adjacent buildings. [Description] When a single residence is attached to a single adjacent residence it is considered to be 'semi-detached' and may be termed a 'duplex'. When a single residence is attached to two adjacent residences on opposite sides to form a row it is termed a 'terraced house' or 'row house'.
<i>allowed values:</i> False			No Information			True
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
---	---	----------------	--------	----------	-----	---

allowed values: *No Information*

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
----------------------------	---	-----------	------	-------	---	---

allowed values: *-999999.0*

Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
-------------------	---	-----------	------	-------	---	---

allowed values: *-999999.0*

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
--------	---	-----------	------	-------	---	--

allowed values: *-999999.0*

Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
<i>allowed values:</i> False			No Information			True
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Multi-unit Building	1	No Information	Boolean	Unitless	0	An indication that a building is divided into two or more distinct sets of rooms or other interior spaces that are internally fully-connected while being separated from each other and common areas by controlled access point(s) (for example: lockable doors) that enable physical privacy and security for its occupants. [Description] For example, an apartment building consisting of multiple self-contained residences individually including spaces for personal activities, cooking, eating, sleeping, and (usually) a private bathroom, or an office building housing multiple commercial establishments individually including spaces for reception, meetings, single or open-plan work areas, as well as individual or common-use bathrooms or cafeterias.
<i>allowed values:</i> False			No Information			True
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. Feature TransRouteCharacterChange (Line)New ☐ Transportation Route Characteristic Change

A section of a transportation route where its size (for example: narrowing or expansion in width) and/or operating speed is significantly different than in the adjacent sections of the route. [Description] For example, an increase or decrease in the number of lanes in a road. Constrictions along or beside a transportation route may impede the flow of vehicles or people thus resulting in 'choke points'.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Bypass Condition	1	No Information	Enumeration	Unitless	0	The ease or ability to circumvent a destroyed section of bridge, tunnel or pass within a distance of two kilometres from the feature. [Description] Bypass condition will not consider other bridges in bypass determination.

New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Horizontal Clearance	1	-999999.0	REAL	metre	0	The distance available to pass a load that extends laterally beyond the wheels of a vehicle.
<i>allowed values:</i> -999999.0						

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMOOwnerProducer
<i>allowed values:</i> noInformation						
Route Minimum Travelled Way Width	1	-999999.0	REAL	metre	0	The minimum width of the travelled way of a route. [Description] Excludes pavements and shoulders.
<i>allowed values:</i> -999999.0						
Route Width Constriction Type	1	No Information	Enumeration	Unitless	0	The type of a route width constriction based on the nature of the surrounding area. [Description] For example, reduction in road width to less than 4 metres is considered to be a constriction. Width restrictions cause vehicles and people to travel through narrow passages creating choke points.

<i>allowed values:</i>	Arcade Building Curb Embankment Ford Hedgerow Other Pipeline Crossing Point Ramp Rock Formation Transportation Block		Bridge Pier Causeway Structure Cut Entrance and/or Exit Gallery Memorial Monument Parking Garage Prepared Watercourse Crossing Reduced Track or Lane Count Route-related Structure Transportation Route Protection Structure		Bridge Superstructure Cave Dam Fence Gantry No Information Pass Railway Signal Retail Stand Stair Tunnel	Bridge Tower Culvert Dropgate Fire Hydrant Gate Non-building Structure Pipeline Railway Switch Road Interchange Steep Terrain Face Underpass
Route Width Expansion Type	1	No Information	Enumeration	Unitless	0	The type of a route width expansion based on the nature of the expansion and/or surrounding area.
<i>allowed values:</i>	Increased Track or Lane Count Roadside Rest Area		No Information Shoulder		Other Siding	Railway Sidetrack
Safe Horizontal Clearance	1	-999999.0	REAL	metre	0	Minimum safe horizontal distance between adjacent structures on either side of a navigable channel.
<i>allowed values:</i>	-999999.0					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i>	noInformation					
Traffic Restriction Type	1	No Information	Enumeration	Unitless	0	The reason for traffic restriction based on the nature of the route.
<i>allowed values:</i>	No Information Road Interchange		Other Sharp Curves		Railway Switch Steep Grades	Reduced Track or Lane Count
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i>	Canal Pedestrian		Inland Waterway Railway		No Information Road	Other
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature TransRouteCharacterChange (Point)

New ☐ Transportation Route Characteristic Change

A section of a transportation route where its size (for example: narrowing or expansion in width) and/or operating speed is significantly different than in the adjacent sections of the route. [Description] For example, an increase or decrease in the number of lanes in a road. Constrictions along or beside a transportation route may impede the flow of vehicles or people thus resulting in 'choke points'.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Bypass Condition	1	No Information	Enumeration	Unitless	0	The ease or ability to circumvent a destroyed section of bridge, tunnel or pass within a distance of two kilometres from the feature. [Description] Bypass condition will not consider other bridges in bypass determination.
<i>allowed values:</i> Difficult			Easy			Impossible No Information
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	AQ059	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AQ059						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other

Feature TransRouteProtectStruct (Area)

New ☐ Transportation Route Protection Structure

A structure built over and/or along a transportation route designed to prevent damage to, or blockage of, the route from rock slides, snow slides and/or weather phenomena. [Description] For example, a snow shed, a rock shed or a gallery. These structures are usually located in rugged mountainous regions.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded. <i>allowed values:</i> -999999.0
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature. <i>allowed values:</i> -999999.0
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack). <i>allowed values:</i> noInformation
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography. <i>allowed values:</i> [-999999, -999999]
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public). <i>allowed values:</i> No Information Other Private Public
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance. <i>allowed values:</i> noInformation
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures. <i>allowed values:</i> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AL211	CONSTRAINED_STRING	Unitless	5	Feature Code <i>allowed values:</i> AL211
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set. <i>allowed values:</i> noInformation

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u> No Information			Other			
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Horizontal Clearance	1	-999999.0	REAL	metre	0	The distance available to pass a load that extends laterally beyond the wheels of a vehicle.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information		True	
	Overhead Clearance	1	-999999.0	REAL	metre	0	The least distance between the travelled way and any obstruction vertically above it. [Description] Reference STANAG 2253.
	<u>allowed values:</u> -999999.0						
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<u>allowed values:</u> Construction Intact			Damaged No Information		Destroyed Unmaintained	Dismantled
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
	<u>allowed values:</u> U						

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

Transportation Route Protection Structure Type	1	No Information	Enumeration	Unitless	0	The type of a transportation route protection structure based on its configuration and/or intended purpose.
<i>allowed values:</i> Gallery Rock Protection Shed			No Information Snow Protection Shed			Other Protection Shed
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> Canal Road			No Information			Other Railway
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

New ☐ Transportation Route Protection Structure

A structure built over and/or along a transportation route designed to prevent damage to, or blockage of, the route from rock slides, snow slides and/or weather phenomena.
[Description] For example, a snow shed, a rock shed or a gallery. These structures are usually located in rugged mountainous regions.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> No Information			Other			Private Public
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AL211	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL211						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.

<i>allowed values:</i> <i>noInformation</i>						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information <i>Other</i>						
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> <i>-999999.0</i>						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> <i>-999999.0</i>						
Horizontal Clearance	1	-999999.0	REAL	metre	0	The distance available to pass a load that extends laterally beyond the wheels of a vehicle.
<i>allowed values:</i> <i>-999999.0</i>						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> <i>-999999.0</i>						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> <i>False</i> <i>No Information</i> <i>True</i>						
Overhead Clearance	1	-999999.0	REAL	metre	0	The least distance between the travelled way and any obstruction vertically above it. [Description] Reference STANAG 2253.
<i>allowed values:</i> <i>-999999.0</i>						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact <i>Damaged</i> <i>No Information</i> <i>Destroyed</i> <i>Unmaintained</i> <i>Dismantled</i>

	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Horizontal Clearance	1	-999999.0	REAL	metre	0	The distance available to pass a load that extends laterally beyond the wheels of a vehicle.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False		No Information			True	
	Overhead Clearance	1	-999999.0	REAL	metre	0	The least distance between the travelled way and any obstruction vertically above it. [Description] Reference STANAG 2253.
	<u>allowed values:</u> -999999.0						
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<u>allowed values:</u> Construction Intact		Damaged No Information			Destroyed Unmaintained	Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Transportation Route Protection Structure Type	1	No Information	Enumeration	Unitless	0	The type of a transportation route protection structure based on its configuration and/or intended purpose.
<i>allowed values:</i> Gallery Rock Protection Shed			No Information Snow Protection Shed			Other Protection Shed
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> Canal Road			No Information			Other Railway

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Tree (Point)

New ☐ Tree

An individual woody perennial plant, typically having a single stem or trunk growing to a considerable height and bearing lateral branches at some distance from the ground. [Description] May be distinguished by its relative isolation from other features, thus serving as a landmark.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	EC005	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> EC005						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.

allowed values: noInformation

Foliage Type	1	No Information	Enumeration	Unitless	0	The predominant foliage type of the vegetation.
<u>allowed values:</u>	Deciduous		Evergreen			No Information Other
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u>	No Information					
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

<i>allowed values:</i> No Information							
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISClassificationAll	
<i>allowed values:</i> U							
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode	
<i>allowed values:</i> No Information			Other				
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISDissem	
<i>allowed values:</i> noInformation							
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISNonIC	
<i>allowed values:</i> noInformation							
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISOwnerProducer	
<i>allowed values:</i> noInformation							
New Snow or Ice Depth	1	[-999999.0, -999999.0]	REAL_Interval	Metre	0	The depth of the snow or ice. [Description] The snow or ice layer ranges from the top of the snow or ice surface to the underlying terrain.	
<i>allowed values:</i> [-999999.0, -999999.0]							

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	--

allowed values: noInformation

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
--------------------------	---	---------------	----------------	----------	-----	--

allowed values: noInformation

allowed values: pimGUID

Vegetation Trafficability Impact	1	-999999.0	Real	Percent	0	The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
----------------------------------	---	-----------	------	---------	---	---

allowed values: -999999.0

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Tunnel (Area)

New ☐ Tunnel

An underground passage that is open at both ends and usually contains a land transportation route (for example: a road and/or a railway). [Description] Commonly used to pass through a hill or mountain, or under a river or road. May also provide underground passage in a mine.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.

allowed values: -999999.0

Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
------	---	-----------	------	-------------	---	---

	allowed values: -999999.0						
	Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
	allowed values: noInformation						
	Bypass Condition	1	No Information	Enumeration	Unitless	0	The ease or ability to circumvent a destroyed section of bridge, tunnel or pass within a distance of two kilometres from the feature. [Description] Bypass condition will not consider other bridges in bypass determination.
	allowed values: Difficult			Easy			Impossible
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	allowed values: [-999999, -999999]						No Information
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	allowed values: No Information			Other			Private
	Deck Count	1	-999999	Integer	unitless	0	The number of vertically stacked decks, one over another, in a transportation structure (for example: a bridge or a tunnel).
	allowed values: -999999						Public
	Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
	allowed values: -999999.0						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	allowed values: noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	allowed values: No Information			Non-operational			Not in Operation
	Partially Operational			Planned			Temporarily Non-operational
New	Feature Code	1	AQ130	CONSTRAINED_STRING	Unitless	5	Feature Code
	allowed values: AQ130						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	allowed values: noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	allowed values: No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	allowed values: No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.

<i>allowed values:</i> Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original		Native Original Provisional Variant Transliterated	
Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The intended use(s) of a designated hazard protection shelter based on the kind of emergency. [Description] Hazard shelters may be located inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.	
<i>allowed values:</i> Bomb Shelter Storm Shelter			Fallout Shelter			No Information	Other
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.	
<i>allowed values:</i> -999999.0							
Horizontal Clearance	1	-999999.0	REAL	metre	0	The distance available to pass a load that extends laterally beyond the wheels of a vehicle.	
<i>allowed values:</i> -999999.0							
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.	
<i>allowed values:</i> -999999.0							
Least Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling. The least depth below surface level may be located at ground or water level and therefore have a value of zero (for example: an opencast extraction mine, a terrain depression or a lake). For depths defined with respect to a time-varying water level, consideration should be given to the use of Attribute: 'Hydrographic Depth'.	
<i>allowed values:</i> -999999.0							
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<i>allowed values:</i> -999999.0							
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i> No Information							
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i> No Information							
Overhead Clearance	1	-999999.0	REAL	metre	0	The least distance between the travelled way and any obstruction vertically above it. [Description] Reference STANAG 2253.	
<i>allowed values:</i> -999999.0							
Pedestrian Traversable	1	No Information	Boolean	Unitless	0	An indication that a feature is traversable on foot.	
<i>allowed values:</i> False			No Information			True	
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.	
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained	Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). 	Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
	<i>allowed values:</i> -999999.0						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	AQ130	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AQ130						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The intended use(s) of a designated hazard protection shelter based on the kind of emergency. [Description] Hazard shelters may be located inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
	<i>allowed values:</i> Bomb Shelter Storm Shelter			Fallout Shelter			No Information Other
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Horizontal Clearance	1	-999999.0	REAL	metre	0	The distance available to pass a load that extends laterally beyond the wheels of a vehicle.
	<i>allowed values:</i> -999999.0						
	Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.

allowed values: -999999.0

Least Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling. The least depth below surface level may be located at ground or water level and therefore have a value of zero (for example: an opencast extraction mine, a terrain depression or a lake). For depths defined with respect to a time-varying water level, consideration should be given to the use of Attribute: 'Hydrographic Depth'.
---------------------------------	---	-----------	------	-------	---	---

allowed values: -999999.0

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
--------	---	-----------	------	-------	---	--

allowed values: -999999.0

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
-------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
---	---	----------------	--------	----------	----	--

allowed values: No Information

Overhead Clearance	1	-999999.0	REAL	metre	0	The least distance between the travelled way and any obstruction vertically above it. [Description] Reference STANAG 2253.
--------------------	---	-----------	------	-------	---	--

allowed values: -999999.0

Pedestrian Traversable	1	No Information	Boolean	Unitless	0	An indication that a feature is traversable on foot.

Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISClassificationAll
---	---	---	----------	----------	----	--

allowed values: U

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
---	---	----------------	----------	----------	----	---

allowed values: No Information

Other

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
---	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Route Total Usable Width	1	-999999.0	REAL	Metre	0	The total usable width of the travelled way of a route. [Description] Includes pavements and shoulders.
<i>allowed values:</i> -999999.0						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> Aqueduct No Transportation System Railway			Canal Other Road			Inland Waterway Pedestrian Taxiway No Information Portage
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature TunnelMouth (Point)New ☐ Tunnel Mouth

The opening of a tunnel into a larger space (for example: onto the terrain surface). [Description] A tunnel is usually open to the terrain surface at both ends, but may sometimes lead to an enclosed space, for example: leading to an underground bunker, into an underground mine (termed an 'adit') or into an underground railway station.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other Joint Military and Civilian Private Military Public No Information						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational

Feature **UndergroundBunker (Area)** New ☐ Underground Bunker

A reinforced underground shelter. [Description] May be located within a mountain or buried below the terrain. Often used as an underground facility for military command, control, and/or troop billeting.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Deepest Depth Below Surface Level	1	-999999.0	REAL	metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AH060	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AH060						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The intended use(s) of a designated hazard protection shelter based on the kind of emergency. [Description] Hazard shelters may be located inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
<i>allowed values:</i> Bomb Shelter Storm Shelter			Fallout Shelter			No Information Other
Least Depth Below Surface Level	1	-999999.0	REAL	metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling. The least depth below surface level may be located at ground or water level and therefore have a value of zero (for example: an opencast extraction mine, a terrain depression or a lake). For depths defined with respect to a time-varying water level, consideration should be given to the use of Attribute: 'Hydrographic Depth'.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Military Service Branch	1	No Information	Enumeration	Unitless	0	The branch of the armed forces of a nation. [Description] May also be applied to similar organizations following military discipline (for example: a coastguard).
<i>allowed values:</i> Air Force Marines			Army Navy			Coastguard No Information Joint Other
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Permanent	1	No Information	Boolean	Unitless	0	An indication that a feature is permanent. [Description] Temporary features last, or are meant to last, for a limited time only.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Bedrock No Information Soil			Brick Other			Concrete Prestressed Concrete Masonry Reinforced Concrete
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

allowed values: noInformation*allowed values:* pimGUID

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						

Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i>	Bedrock No Information Soil		Brick Other			Concrete Prestressed Concrete Masonry Reinforced Concrete
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i>	noInformation					
<i>allowed values:</i>	pimGUID					
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature UndergroundDwelling (Point)

New ☐ Underground Dwelling

Underground living quarters.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i>	No Information					
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i>	-999999.0					
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i>	noInformation					
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i>	[-999999, -999999]					

	Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
	<i>allowed values:</i> -999999.0						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	AL250	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AL250						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencl . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The intended use(s) of a designated hazard protection shelter based on the kind of emergency. [Description] Hazard shelters may be located inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
	<i>allowed values:</i> Bomb Shelter Storm Shelter			Fallout Shelter			No Information Other
	Least Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling. The least depth below surface level may be located at ground or water level and therefore have a value of zero (for example: an opencast extraction mine, a terrain depression or a lake). For depths defined with respect to a time-varying water level, consideration should be given to the use of Attribute: 'Hydrographic Depth'.
	<i>allowed values:</i> -999999.0						

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact						
Damaged						
Destroyed						
Dismantled						
No Information						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Aluminum Other			Iron Steel			Metal Wood No Information
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Average Water Depth	1	[-999999.0, -999999.0]	Real_Interval	Metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999.0, -999999.0]						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						
Direction of Flow	1	-999999.0	REAL	arcDegree	0	The bearing of movement or direction of the flow.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	BH145	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BH145						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.

<u>allowed values:</u> <i>nolInformation</i>						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> <i>No Information</i>						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> <i>No Information</i>			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original <i>No Information</i> Unverified Transliterated	Historical Transliterated <i>Other</i> Variant Original	Native Original Provisional Variant Transliterated	
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<u>allowed values:</u> <i>-999999.0</i>						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> <i>No Information</i>						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> <i>No Information</i>						
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<u>allowed values:</u> <i>-999999.0</i>						
Water Resource Information : pH	1	-999999.0	Real	Milligrams per Litre	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<u>allowed values:</u> <i>-999999.0</i>						
Predominant Average Water Velocity	1	-999999.0	REAL	Metre per Second	0	The average water velocity, exclusive of high water due to runoff or low water due to drought.
<u>allowed values:</u> <i>-999999.0</i>						
Predominant Maximum Water Depth	1	-999999.0	REAL	Metre	0	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> <i>-999999.0</i>						
Predominant Maximum Water Velocity	1	-999999.0	REAL	Metre per Second	0	The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.
<u>allowed values:</u> <i>-999999.0</i>						
Predominant Water Depth	1	[-999999.0, -999999.0]	Real_Interval	Metre	0	The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> <i>[-999999.0, -999999.0]</i>						

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable						
No Information Treatable Nonpotable Other						
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline						
Brackish No Information Seawater Brine Not Applicable Fresh Other						
Watercourse Sink Type	1	No Information	Enumeration	Unitless	0	The type of the sink of a watercourse.
<i>allowed values:</i> Disappearing Other						
Dissipating Sinkhole Hole No Information

Feature VehicleBarrier (Line)

New ☐ Vehicle Barrier

An obstruction associated with a transportation route (for example: a road, a railway, a tunnel, or a bridge) to constrain, restrict, and/or prevent passage of vehicles. [Description] A permanent obstruction is fixed in place at a given location to continuously constrain traffic, and it is constructed such that it cannot be removed without major roadway excavation. A semi-permanent obstruction is placed at a given location so that traffic can be continuously constrained, but it is constructed such that it can be removed without major roadway excavation. A temporary, or non-permanent obstruction is placed at a given location to constrain traffic for a limited time only, and it is constructed such that it can be removed without major roadway excavation.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
-----------	-------------	---------	-----------	-------	--------	----------------------

	Angle of Orientation	1	-999999.0	Real	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
	<i>allowed values:</i> -999999.0						
	Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
	<i>allowed values:</i> -999999.0						
	Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).

New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	AP041	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AP041						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						

Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact Damaged No Information Destroyed Unmaintained Dismantled						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISNonIC
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Concrete Other Wood			Masonry Prestressed Concrete			Metal Reinforced Concrete No Information Soil
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> No Information Underground Railway			Other			Railway Road
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature VehicleBarrier (Point)

New ☐ Vehicle Barrier

An obstruction associated with a transportation route (for example: a road, a railway, a tunnel, or a bridge) to constrain, restrict, and/or prevent passage of vehicles. [Description] A permanent obstruction is fixed in place at a given location to continuously constrain traffic, and it is constructed such that it cannot be removed without major roadway excavation. A semi-permanent obstruction is placed at a given location so that traffic can be continuously constrained, but it is constructed such that it can be removed without major roadway excavation. A temporary, or non-permanent obstruction is placed at a given location to constrain traffic for a limited time only, and it is constructed such that it can be removed without major roadway excavation.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	Real	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<u>allowed values:</u> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<u>allowed values:</u> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<u>allowed values:</u> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<u>allowed values:</u> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<u>allowed values:</u> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AP041	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> AP041						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<u>allowed values:</u> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.

<i>allowed values:</i> Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original		Native Original Provisional Variant Transliterated	
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.	
<i>allowed values:</i> -999999.0							
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.	
<i>allowed values:</i> -999999.0							
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<i>allowed values:</i> -999999.0							
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i> No Information							
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i> No Information							
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.	
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained	Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll	
<i>allowed values:</i> U							
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<u>allowed values:</u> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
	<u>allowed values:</u> U						
	Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
	<u>allowed values:</u> No Information			Other			

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Route Pavement Information : Route Surface Composition	1	No Information	Enumeration	Unitless	0	The composition(s) of a durable surface (for example: a pavement) intended to sustain ground traffic (for example: vehicular traffic or foot traffic). [Description] Depending on the traffic situation (for example: on a floor, in a courtyard, or on a road) different compositions may be used, however in general such surfaces are composed of pieces of a hard material fitted closely together (for example: cobble-stone or brick) or of an undivided hard layer (for example: concrete) so as to give a compact, uniform, and smooth surface.
<i>allowed values:</i> Aggregate Brick Flexible Pavement No Information Stabilized Earth			Asphalt Cobble-stone Ice Other Unimproved			Asphalt over Concrete Concrete Macadam Rigid Pavement Wood Bound Surface Corduroy Metal Snow Wood Plank
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID

<i>allowed values:</i> Aircraft Boat Motorcycle			Automobile Bus No Information			Barge Caravan Other Bicycle Caravanette Ship

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature VesselLift (Area)

New ☐ Vessel Lift

A mechanical device for lifting vessels from the water. [Description] The device may be, for example, a stationary crane or a wheeled vehicle. After removal from the water the vessel may be maintained (for example: cleaning the hull of encrustations) or stored (for example: moved to a building, shed, or lot for winter storage).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BI005	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BI005						

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<u>allowed values:</u> noInformation							
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999.0							
	Lifting Capacity	1	-999999.0	REAL	tonne	0	The maximum weight that can be safely raised by a lifting device (for example: a crane).
<u>allowed values:</u> -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information							
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information							
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False

<i>allowed values:</i> Center Pivot Linear Move Subirrigation			Drip No Information Terrace			Furrow Other Lateral Move Overhead
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation

Crop Information : Crop Species	1	Grape	Enumeration	Unitless	0	The predominant species of a crop land.
<i>allowed values:</i> Grape						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Crop Information : Farming Pattern	3	No Information	Enumeration	Unitless	0	The general arrangement(s) and/or pattern(s) of farming fields.
<i>allowed values:</i> Intermingled Trees No Information Treeless			Intermingled Woods Other Trellised			Irregular Regular Linear Terraced
New Feature Code	1	EA050	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> EA050						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.

allowed values: noInformation

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (":"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.

<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

	<i>allowed values:</i> DB190						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

<i>allowed values:</i> noInformation						
Surface Slope	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The slope (rate of upward inclination of the surface from the horizontal) of the surface of a feature (for example: the terrain or a waterbody floor). [Description] The (percent) slope is determined as the change in height divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100. Generally the slope is determined along the primary alignment of a feature (its established direction of flow or use; for example: a road, a railway, a ridge line, and/or a bridge). In those cases where the primary alignment is essentially horizontal (for example, a beach, a watercourse bank, or a cut) the surface slope is typically determined at right angles to the primary alignment.
<i>allowed values:</i> [-999999.0, -999999.0]

[DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<u>allowed values:</u> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<u>allowed values:</u> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<u>allowed values:</u> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<u>allowed values:</u> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<u>allowed values:</u> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

Width	1	-999999.0	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Volcano (Point)

New ☐ Volcano

A hill or mountain situated over an opening or openings in the Earth's crust through which lava, cinders, steam, and/or gases, are or have been expelled.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	DB180	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> DB180						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other

	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False			No Information			True
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. Predominant Feature Height	1	[-999999.0, -999999.0]	REAL_INTERVAL	Metre	0	The predominant height (the height of at least 50 percent) of the feature measured from the lowest point of the base at ground or water level (downhill side/downstream side).
allowed values: [-999999.0, -999999.0]						

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
<i>allowed values:</i> Brick No Information Steel			Concrete Other Stone			Masonry Prestressed Concrete Treated Timber Metal Reinforced Concrete Wood
Thickness	1	-999999.0	REAL	metre	0	The distance between the two opposite surfaces of an object, usually the distance of smallest measure. [Description] The third dimension of an object, distinct from length and width (breadth).
<i>allowed values:</i> -999999.0						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature WasteHeap (Area)New ☒ Waste Heap

An area where heaped material (for example: waste or spoil) is deposited. [Description] Waste heaps may be located at disposal sites or in unsanctioned and unprepared locations where illegal dumping takes place. Illegal dumping sites are usually composed of materials produced in the immediately surrounding area; for example, in a residential neighborhood their content would principally be household trash. Illegal dumping sites have no associated structures or facilities.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

						Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISClassificationAll	
<i>allowed values:</i> U							
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode	
<i>allowed values:</i> No Information			Other				
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISDissem	
<i>allowed values:</i> noInformation							

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature WaterAerodrome (Area)

New ☐ Water Aerodrome

An aerodrome intended to be used either wholly or in part for the arrival, departure and surface movement of aircraft on water.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aerodrome Elevation	1	-999999.0	REAL	metre	0	The vertical distance above Mean Sea Level (MSL) of the highest point of the landing area. <i>allowed values:</i> -999999.0
Aerodrome Official Name	1	No Information	String	Unitless	80	The primary official name of an aerodrome as designated by an appropriate authority. <i>allowed values:</i> No Information
Airfield Symbol Type	1	No Information	Enumeration	Unitless	0	The type of airfield symbol designation. <i>allowed values:</i> A - Active Civilian E - Abandoned or Closed (with usable runways or landing areas) B - Active Joint (Civilian/Military) G - Unusable for landing or take-off C - Active Military No Information D - Active (with less than the minimum facilities) X - Decoy
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature. <i>allowed values:</i> -999999.0
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack). <i>allowed values:</i> noInformation
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography. <i>allowed values:</i> [-999999, -999999]
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public). <i>allowed values:</i> Civilian Other Joint Military and Civilian Private Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance. <i>allowed values:</i> noInformation
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures. <i>allowed values:</i> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational
New Feature Code	1	GB065	CONSTRAINED_STRING	Unitless	5	Feature Code <i>allowed values:</i> GB065
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set. <i>allowed values:</i> noInformation
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end. <i>allowed values:</i> No Information

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	ICAO Location Indicator	1	noInformation	StructuredText	Unitless	14	The identifier that is assigned to a location in accordance with rules prescribed by the International Civil Aviation Organization (ICAO) in Document 7910. [Description] If available this indicator shall be used as primary for identification. [DatatypeSpecification] A structured text value specifying an ICAO location indicator. [EncodingSpecification] The 2 letter ICAO code of the State being responsible for the aerodrome in accordance with ICAO Doc7910, followed by either a two-digit integer between 01 and 99 or characters in the range A-Z.
	<u>allowed values:</u> noInformation						
	Installation Operator	1	No Information	String	Unitless	2E+09	The name of the company or authority operating an installation.
	<u>allowed values:</u> No Information						
New	Largest Aircraft	1	No Information	String	Unitless	254	The largest aircraft that has used the facility within the past five years.
	<u>allowed values:</u> No Information						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Magnetic Variation	1	-999999.0	Real	Arc Degree	0	The angular difference between True North and Magnetic North measured at a given position and date. [Description] The value given indicates whether the angular difference is East (positive) or West (negative) of True North. True North is the direction of the northern point at which the geographic meridian lines meet.
	<u>allowed values:</u> -999999.0						
	Magnetic Variation Information : Magnetic Variation Date	1	noInformation	StructuredText	Unitless	20	The date on which the magnetic variation was measured. [Structure] MMDDYYYY
	<u>allowed values:</u> noInformation						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.

<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained	Dismantled
Port of Entry	1	No Information	Boolean	Unitless	0	An indication that a facility is a port of entry for customs and immigration purposes.	
<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>	
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISClassificationAll	
<i>allowed values:</i> <i>U</i>							
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode	
<i>allowed values:</i> <i>No Information</i>			Other				
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISDissem	
<i>allowed values:</i> <i>noInformation</i>							
Restriction Information : Security Attributes Group <resource non- intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISNonIC	
<i>allowed values:</i> <i>noInformation</i>							
Restriction Information : Security Attributes Group <resource owner- producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISOwnerProducer	
<i>allowed values:</i> <i>noInformation</i>							
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.	
<i>allowed values:</i> <i>noInformation</i>							
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

	ICAO Location Indicator	1	noInformation	StructuredText	Unitless	14	The identifier that is assigned to a location in accordance with rules prescribed by the International Civil Aviation Organization (ICAO) in Document 7910. [Description] If available this indicator shall be used as primary for identification. [DatatypeSpecification] A structured text value specifying an ICAO location indicator. [EncodingSpecification] The 2 letter ICAO code of the State being responsible for the aerodrome in accordance with ICAO Doc7910, followed by either a two-digit integer between 01 and 99 or characters in the range A-Z.
<i>allowed values:</i> noInformation							
	Installation Operator	1	No Information	String	Unitless	2E+09	The name of the company or authority operating an installation.
<i>allowed values:</i> No Information							
New	Largest Aircraft	1	No Information	String	Unitless	254	The largest aircraft that has used the facility within the past five years.
<i>allowed values:</i> No Information							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0							
	Magnetic Variation	1	-999999.0	Real	Arc Degree	0	The angular difference between True North and Magnetic North measured at a given position and date. [Description] The value given indicates whether the angular difference is East (positive) or West (negative) of True North. True North is the direction of the northern point at which the geographic meridian lines meet.

allowed values: -999999.0

Magnetic Variation Information : Magnetic Variation Date	1	noInformation	StructuredText	Unitless	20	The date on which the magnetic variation was measured. [Structure] MMDDYYYY

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<u>allowed values:</u> Construction Intact Damaged No Information Destroyed Dismantled Unmaintained						
Port of Entry	1	No Information	Boolean	Unitless	0	An indication that a facility is a port of entry for customs and immigration purposes.
<u>allowed values:</u> False No Information True						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<u>allowed values:</u> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<u>allowed values:</u> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<u>allowed values:</u> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<u>allowed values:</u> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0

[Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Waterfall (Point)

New ☐ Waterfall

A vertically descending part of a watercourse where it falls from a height (for example: over a rock or a precipice). [Description] In place names, commonly shortened to 'fall' or 'falls', for example, 'Niagara Falls'.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	Real	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	BH180	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BH180						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other

<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						

Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			

Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original
						Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry Perennial			Ephemeral			Intermittent No Information
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Milligrams per Litre	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.

<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained	Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll	
<i>allowed values:</i> U							
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode	
<i>allowed values:</i> No Information			Other				
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMDissem	
<i>allowed values:</i> noInformation							
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC	
<i>allowed values:</i> noInformation							
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer	
<i>allowed values:</i> noInformation							
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.	
<i>allowed values:</i> noInformation							
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.	
<i>allowed values:</i> -999999.0							
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.	
<i>allowed values:</i> -999999.0							
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.	
<i>allowed values:</i> -999999.0							

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Aluminum Brick Concrete Iron						
Masonry Metal No Information Other						
Prestressed Concrete Reinforced Concrete Steel Treated Timber						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated No Information Nonpotable Other						
Potable Treatable						
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Brine Fresh						
Mineral No Information Not Applicable Other						
Saline Seawater						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999.0

Feature WaterIntakeTower (Point)

New ☐ Water Intake Tower

A tower-like structure associated with a dam or water source and used for the intake of water.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights. <i>allowed values:</i> False No Information True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded. <i>allowed values:</i> -999999.0
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature. <i>allowed values:</i> -999999.0
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic. <i>allowed values:</i> -999999.0
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack). <i>allowed values:</i> noInformation
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography. <i>allowed values:</i> [-999999, -999999]
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water. <i>allowed values:</i> -999999.0
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density. <i>allowed values:</i> -999999.0
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public). <i>allowed values:</i> Civilian Other Joint Military and Civilian Private Military Public No Information
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life. <i>allowed values:</i> -999999.0
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance. <i>allowed values:</i> noInformation
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures. <i>allowed values:</i> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BI050	CONSTRAINED_STRING	Unitless	5	Feature Code <i>allowed values:</i> BI050
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.

<i>allowed values:</i> <i>noInformation</i>						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information

<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Aluminum Masonry Prestressed Concrete			Brick Metal Reinforced Concrete			Concrete No Information Steel Iron Other Treated Timber
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable			No Information Treatable			Nonpotable Other
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline			Brackish No Information Seawater			Brine Not Applicable Fresh Other

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature **WaterMeasurementLocation (Area)** New ☐ Water Measurement Location

A location at which water-related measurements are taken. [Description] Water measurements include, for example: water chemistry and/or quality; water depth, volume or velocity; and water presence variability or seasonality.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Water Resource Information : Arsenic Concentration	1	-999999.0	REAL	gramPerCubicMetre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Average Water Depth	1	[-999999.0, -999999.0]	REAL_INTERVAL	metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999.0, -999999.0]						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	REAL	gramPerCubicMetre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	REAL	unitless	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Water Resource Information : Cyanide Concentration	1	-999999.0	REAL	gramPerCubicMetre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.

<i>allowed values:</i> noInformation							
New	Feature Code	1	ZD070	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i> ZD070							
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation							
	Geographic Name Information : Full Name (first)	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information							
<i>allowed values:</i> No Information							
<i>allowed values:</i> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry				Intermittent	No Information	Perennial	
	Least Depth Below Surface Level	1	-999999.0	REAL	metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling. The least depth below surface level may be located at ground or water level and therefore have a value of zero (for example: an opencast extraction mine, a terrain depression or a lake). For depths defined with respect to a time-varying water level, consideration should be given to the use of Attribute: 'Hydrographic Depth'.
<i>allowed values:</i> -999999.0							
	Water Resource Information : Magnesium Concentration	1	-999999.0	REAL	gramPerCubicMetre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information							
	Geographic Name Information : Name Identifier (first)	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information							

allowed values: No Informationallowed values: No Information

Water Resource Information : Nephelometric Turbidity	1	-999999.0	REAL	unitless	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
---	---	-----------	------	----------	---	---

allowed values: -999999.0

Water Resource Information : pH	1	-999999.0	REAL	unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
---------------------------------	---	-----------	------	----------	---	--

allowed values: -999999.0

Predominant Average Water Velocity	1	-999999.0	REAL	metrePerSecond	0	The average water velocity, exclusive of high water due to runoff or low water due to drought.
------------------------------------	---	-----------	------	----------------	---	--

allowed values: -999999.0

Predominant Maximum Water Depth	1	-999999.0	REAL	metre	0	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
---------------------------------	---	-----------	------	-------	---	--

allowed values: -999999.0

Predominant Maximum Water Velocity	1	-999999.0	REAL	metrePerSecond	0	The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.
------------------------------------	---	-----------	------	----------------	---	--

allowed values: -999999.0

Predominant Minimum Water Depth	1	-999999.0	REAL	metre	0	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
---------------------------------	---	-----------	------	-------	---	---

allowed values: -999999.0

Predominant Minimum Water Velocity	1	-999999.0	REAL	metrePerSecond	0	The average minimum (seasonal low water) water velocity, exclusive of high water due to runoff or low water due to drought.
------------------------------------	---	-----------	------	----------------	---	---

allowed values: -999999.0

Predominant Water Depth	1	[-999999.0, -999999.0]	REAL_INTERVAL	metre	0	The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
-------------------------	---	------------------------	---------------	-------	---	--

allowed values: [-999999.0, -999999.0]

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll

<i>allowed values: -999999.0</i>						
Water Resource Information : Cyanide Concentration	1	-999999.0	REAL	gramPerCubicMetre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values: -999999.0</i>						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values: noInformation</i>						
New Feature Code	1	ZD070	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values: ZD070</i>						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values: noInformation</i>						

Geographic Name Information : Full Name (first)	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
<i>allowed values:</i> No Information						
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type (first)	1	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.

<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry			Intermittent			No Information Perennial
Least Depth Below Surface Level	1	-999999.0	REAL	metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the highest point of a feature located completely underground. [Description] For example, in the case of an underground dwelling the least depth below surface level would be measured to its ceiling. The least depth below surface level may be located at ground or water level and therefore have a value of zero (for example: an opencast extraction mine, a terrain depression or a lake). For depths defined with respect to a time-varying water level, consideration should be given to the use of Attribute: 'Hydrographic Depth'.
<i>allowed values:</i> -999999.0						
Water Resource Information : Magnesium Concentration	1	-999999.0	REAL	gramPerCubicMetre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier (first)	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
<i>allowed values:</i> No Information						
<i>allowed values:</i> No Information						
Water Resource Information : Nephelometric Turbidity	1	-999999.0	REAL	unitless	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						

Water Resource Information : pH	1	-999999.0	REAL	unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<u>allowed values:</u> -999999.0						
Predominant Average Water Velocity	1	-999999.0	REAL	metrePerSecond	0	The average water velocity, exclusive of high water due to runoff or low water due to drought.
<u>allowed values:</u> -999999.0						
Predominant Maximum Water Depth	1	-999999.0	REAL	metre	0	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> -999999.0						
Predominant Maximum Water Velocity	1	-999999.0	REAL	metrePerSecond	0	The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.
<u>allowed values:</u> -999999.0						
Predominant Minimum Water Depth	1	-999999.0	REAL	metre	0	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> -999999.0						
Predominant Minimum Water Velocity	1	-999999.0	REAL	metrePerSecond	0	The average minimum (seasonal low water) water velocity, exclusive of high water due to runoff or low water due to drought.
<u>allowed values:</u> -999999.0						
Predominant Water Depth	1	[-999999.0, -999999.0]	REAL_INTERVAL	metre	0	The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> [-999999.0, -999999.0]						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<u>allowed values:</u> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<u>allowed values:</u> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<u>allowed values:</u> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<u>allowed values:</u> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<u>allowed values:</u> noInformation						

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	REAL	gramPerCubicMetre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	REAL	degreeCelsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	REAL	gramPerCubicMetre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Water Resource Information : Water Conductivity	1	-999999.0	REAL	microsiemensPerCentimetre	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	REAL	gramPerCubicMetre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable			No Information Treatable			Nonpotable Other
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Seawater			Brackish No Information			Brine Not Applicable Fresh Saline

Feature WaterMill (Area)New ☐ Water Mill

A structure that uses a water wheel or turbine to drive a mechanical process (for example: grinding grain into flour, cutting timber into lumber, or stripping bark from trees for use in tanning). [Description] A water mill that only generates electricity is more usually termed a 'hydroelectric plant'.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999.0	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AJ055	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AJ055						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Grain Milling Power Generation			No Information Pumping			Oil-mill Sawmilling Other

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<u>allowed values:</u> noInformation						
	Floor Count	1	-999999	Integer	Unitless	0	The number of floors in a structure (for example: a building).
	<u>allowed values:</u> -999999						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information		True	

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained Dismantled
Manufacturing Information : Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i>	Coffee No Information Sugar		Cotton No Product			Lumber Olive Oil Milled Grain Other
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. <i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i>	noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques))' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques))' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i>	noInformation					

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
---------------------------------	---	---------------	----------------	----------	----	--

allowed values: noInformation

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature WaterMill (Point)New ☐ Water Mill

A structure that uses a water wheel or turbine to drive a mechanical process (for example: grinding grain into flour, cutting timber into lumber, or stripping bark from trees for use in tanning). [Description] A water mill that only generates electricity is more usually termed a 'hydroelectric plant'.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999.0	REAL	Arc Degree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.

<u>allowed values:</u> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<u>allowed values:</u> Civilian Other Joint Military and Civilian Private Military Public No Information						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<u>allowed values:</u> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<u>allowed values:</u> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational						
New Feature Code	1	AJ055	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> AJ055						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<u>allowed values:</u> Grain Milling Power Generation No Information Pumping Oil-mill Sawmilling Other						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<u>allowed values:</u> noInformation						
Floor Count	1	-999999	Integer	Unitless	0	The number of floors in a structure (for example: a building).
<u>allowed values:</u> -999999						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> No Information Other						
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<u>allowed values:</u> Conventional Native Transliterated Unverified Original Historical Original No Information Unverified Transliterated Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated						
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.

allowed values: -999999.0

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISClassificationAll
---	---	---	----------	----------	----	--

allowed values: U

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
---	---	----------------	----------	----------	----	---

allowed values: No Information

<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Periodic Marine Current Month Interval	1	noInformation	StructuredText	Unitless	14	The month interval of the presence of a marine current. [Description] For example, a marine current may be present during the months of March through June. [Structure] Formatted in accordance with ISO 8601:2000, 5.2.1, Calendar date - month, as a single data element comprising five characters as two pairs of digits separated by a solidus ('/') where the first [MM] digit-pair represents the ordinal number of a calendar month within the calendar year, and the second [MM] digit-pair the ordinal number of a subsequent calendar month within the same or subsequent calendar year, as 'MM/MM' (for example: '03/09' for March through September). Either of the months may be left unspecified by the use of '-' (for example: '11/-' for November through an unspecified ending month).
<i>allowed values:</i> noInformation						
Reference Water Level	1	No Information	Enumeration	Unitless	0	The reference water level from which temporal offsets in a time-series of measurements (for example: current speed or current direction) are determined.
<i>allowed values:</i> High Tide			Low Tide			No Information
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Hydrographic Depth : Sounding Metadata : Sounding Datum	1	No Information	Enumeration	Unitless	0	The tidal datum to which soundings and drying heights are referenced. [Description] It is usually taken to correspond to a low water stage of the tide.
<i>allowed values:</i>						
Approximate Lowest Astronomical Tide			Approximate Mean Low Water			Approximate Mean Low Water Springs
Approximate Mean Sea Level			Chart Datum (Unspecified)			Equinoctial Spring Low Water
High Water Springs			Higher High Water			Higher High Water Large Tide
Highest High Water			Indian Spring High Water			Indian Spring Low Water
Local Datum			Low Water			Low Water Springs
Lower Low Water Large Tide			Lowest Astronomical Tide			Lowest Low Water
Mean High Water			Mean High Water Neaps			Mean Higher High Water
Mean Higher High Water Springs			Mean Low Water			Mean Low Water Springs
Mean Lower Low Water			Mean Lower Low Water Springs			Mean Tide Level
Mean Water Level			Neap Tide			Nearly Highest High Water
No Information			Other			Nearly Lowest Low Water
						Spring Tide
Hydrographic Depth : Sounding Metadata : Sounding Datum Name	1	No Information	String	Unitless	80	The name of the tidal datum to which soundings and drying heights are referenced. [Description] Used when the sounding datum is known but not specified using Attribute: 'Sounding Datum'.
<i>allowed values:</i> No Information						
Hydrographic Depth : Sounding Metadata : Sounding Velocity Correction Method	1	No Information	Enumeration	Unitless	0	The method of correction that has been used to correct a sounding velocity instrument reading to obtain the correct depth.
<i>allowed values:</i>						
Mathews Tables			No Information			Not Applicable
Sound Velocity Meter			Sounder 1500 Calibrated			Other
						Sounder 4800 Calibrated
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Tidal Current Direction	1	-999999.0	REAL	Arc Degree	0	The tidal current direction at the time of the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level.
<i>allowed values:</i> -999999.0						

Page 2042 of 2120

Tidal Current Speed 4 Hours After	1	-999999.0	REAL	Knot	0	The tidal current speed 4 hours after the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
<i>allowed values:</i> -999999.0						
Tidal Current Speed 4 Hours Before	1	-999999.0	REAL	Knot	0	The tidal current speed 4 hours before the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
<i>allowed values:</i> -999999.0						
Tidal Current Speed 5 Hours After	1	-999999.0	REAL	Knot	0	The tidal current speed 5 hours after the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
<i>allowed values:</i> -999999.0						
Tidal Current Speed 5 Hours Before	1	-999999.0	REAL	Knot	0	The tidal current speed 5 hours before the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
<i>allowed values:</i> -999999.0						
Tidal Current Speed 6 Hours After	1	-999999.0	REAL	Knot	0	The tidal current speed 6 hours after the tide reference level. [Description] Typically used together with Attribute: 'Reference Water Level' to specify the tide reference level from which the time offset is specified.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Hydrographic Depth : Sounding Metadata : Vessel Draft Correction	1	No Information	Boolean	Unitless	0	An indication that a vessel draft correction has been applied.
<i>allowed values:</i> False No Information True

Feature WaterRace (Line)

New ☐ Water Race

An artificial channel for a current of water, especially one built to provide water for industrial or agricultural purposes or for transporting water-borne materials. [Description] For example, a sluice, a flume, or a tailrace.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						

New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<u>allowed values:</u> [-999999, -999999]						
	Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<u>allowed values:</u> -999999.0						
	Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<u>allowed values:</u> -999999.0						
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<u>allowed values:</u> Civilian Other			Joint Military and Civilian Private			Military Public No Information
	Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<u>allowed values:</u> -999999.0						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<u>allowed values:</u> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<u>allowed values:</u> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	BH065	CONSTRAINED_STRING	Unitless	5	Feature Code
	<u>allowed values:</u> BH065						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<u>allowed values:</u> noInformation						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u> No Information			Other			
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<u>allowed values:</u> Dry Perennial			Ephemeral			Intermittent No Information

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False No Information True						
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Milligrams per Litre	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact Damaged No Information Destroyed Dismantled Unmaintained						
Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).
<i>allowed values:</i> Depressed Level No Information Raised						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the feature and the underlying ground (terrain) or waterbody bottom.
<i>allowed values:</i> Above Surface			Below Ground Surface			No Information On Surface
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						

Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i>	Contaminated Potable		No Information Treatable			Nonpotable Other
Water Race Type	1	No Information	Enumeration	Unitless	0	The type of a water race based on its structure and/or intended purpose.
<i>allowed values:</i>	Flume Tailrace		Headrace			No Information Sluice
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i>	Alkaline Mineral Saline		Brackish No Information Seawater			Brine Not Applicable Fresh Other
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i>	Agricultural Irrigation Institutional No Information Sanitary Domestic		Commercial Livestock Other			Domestic Irrigation Military Power Generation Industrial Municipal Recreational
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999.0

Feature WaterTower (Area)

New ☐ Water Tower

A tower supporting an elevated storage tank of water.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i>	False		No Information			True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i>	-999999.0					
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i>	-999999.0					

	Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
	<i>allowed values:</i> -999999.0						
	Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
	<i>allowed values:</i> noInformation						
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
	Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<i>allowed values:</i> -999999.0						
	Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<i>allowed values:</i> -999999.0						
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private		Military Public	No Information
	Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999.0						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned		Not in Operation Temporarily Non-operational	Operational
New	Feature Code	1	AM080	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AM080						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			

Geographic Name Information : Geographic Name Type	2	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original
						Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry Perennial			Ephemeral			Intermittent No Information
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.

<i>allowed values:</i> Construction Intact		Damaged No Information		Destroyed Unmaintained		Dismantled	
New	Pump Present	1	No Information	Boolean	Unitless	0	An indication that a feature supports, contains, or makes use of one or more pumps.
<i>allowed values:</i> False		No Information		True			
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U							
	Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information		Other					
	Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation							
	Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation							
	Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation							
	Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation							
	Structure Shape	1	No Information	Enumeration	Unitless	0	The geometric form, appearance, and/or configuration of the feature as a whole.
<i>allowed values:</i> Cylindrical on Tower No Information				Cylindrical with Conical Top Other		Cylindrical with Domed Top Spherical	
						Cylindrical with Flat Top Spherical on Column	
	Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0							

Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Volume	1	-999999.0	REAL	cubicMetre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable			No Information Treatable			Nonpotable Other
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline			Brackish No Information Seawater			Brine Not Applicable Fresh Other
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic			Commercial Livestock Other			Domestic Irrigation Military Power Generation Industrial Municipal Recreational
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0

The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<i>allowed values:</i> Dry			Ephemeral			Intermittent
	Perennial						No Information
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						

Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
New Pump Present	1	No Information	Boolean	Unitless	0	An indication that a feature supports, contains, or makes use of one or more pumps.
<i>allowed values:</i> False			No Information			True
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structure Shape	1	No Information	Enumeration	Unitless	0	The geometric form, appearance, and/or configuration of the feature as a whole.
<i>allowed values:</i> Cylindrical on Tower No Information			Cylindrical with Conical Top Other			Cylindrical with Domed Top Spherical Cylindrical with Flat Top Spherical on Column
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Supported	1	No Information	Boolean	Unitless	0	An indication that a feature is physically supported by another feature. [Description] For example, a tower may be supported by a building, an aerial may be supported by a tower, or a pipeline may be supported by a trestle.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Volume	1	-999999.0	REAL	cubicMetre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<i>allowed values:</i> -999999.0						

Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable No Information Treatable Nonpotable Other						
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline Brackish No Information Seawater Brine Not Applicable Fresh Other						
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic Commercial Livestock Other Domestic Irrigation Military Power Generation Industrial Municipal Recreational						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature WaterTreatmentBed (Area)New ☐ Water Treatment Bed**A tract for the treatment of water that consists of a bed of material where water is aerated or filtered.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.

	<u>allowed values:</u> -999999.0						
	Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
	<u>allowed values:</u> noInformation						
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<u>allowed values:</u> [-999999, -999999]						
	Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<u>allowed values:</u> -999999.0						
	Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<u>allowed values:</u> -999999.0						
	Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<u>allowed values:</u> -999999.0						
	Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
	<u>allowed values:</u> -999999.0						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<u>allowed values:</u> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<u>allowed values:</u> No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational Operational		
New	Feature Code	1	BH040	CONSTRAINED_STRING	Unitless	5	Feature Code
	<u>allowed values:</u> BH040						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<u>allowed values:</u> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Volume	1	-999999.0	REAL	cubicMetre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						

Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
---	---	-----------	------	----------------------	---	--

allowed values: -999999.0

Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<u>allowed values:</u>	Alkaline Mineral Saline		Brackish No Information Seawater		Brine Not Applicable	Fresh Other

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
allowed values: U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
allowed values: No Information						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
allowed values: noInformation						
Restriction Information : Security Attributes Group <resource non- intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
allowed values: noInformation						
Restriction Information : Security Attributes Group <resource owner- producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. allowed values: noInformation						

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

[CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
	<u>allowed values:</u> U						
	Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
	<u>allowed values:</u> No Information			Other			

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Water Turbulence Type	1	No Information	Enumeration	Unitless	0	The type of a water disturbance caused by the interaction of any combination of waves, currents, eddies, tidal streams, wind, shoals, and obstructions. [Description] May be used as a means of subtyping Feature: 'Water Turbulence'.
<i>allowed values:</i> Breakers						
		Eddies				
		No Information				
		Other				

Relationships:

- WaterTurbulence (Point) - has attribute metadata in - Zero or more - FeatureAttMetadata (Table)
- WaterTurbulence (Point) - has dataset metadata in - Zero or one - Dataset (Area)
- WaterTurbulence (Point) - has dataset metadata in - Zero or one - Dataset (Table)

- WaterTurbulence (Point) - is an extended member of configuration level - Exactly one - GGDM_Specialized (Feature)

Feature WaterWell (Area)

New ☐ Water Well

A shaft sunk into the ground to reach and tap a supply of water intended for uses other than power generation, heating or the extraction of minerals. [Description] May be, for example, drilled to tap deep underground reservoirs or dug to reach a shallow water table. Dug wells are typically circular, lined with masonry, have a stone border and a structure built above then for lowering and raising a bucket.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aquifer Name	1	No Information	String	Unitless	2E+09	The common or scientific name of an aquifer.
<i>allowed values:</i> No Information						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New Casing Diameter	1	-999999.0	REAL	inches	0	The internal diameter of the inner tubular lining installed within a well borehole and acting as the pump chamber casing. [Description] The casing diameter represents the internal diameter of the pump chamber casing, or the casing that is present between the surface level and the installed pump. If the depth of the pump is unknown the casing diameter at the screened locations is collected. Some wells are constructed with no casing, others may have a single casing and still others may have an outer casing and inner casing. In deep wells or when special conditions exist, the casing diameter may become smaller, or telescope as the well deepens.
<i>allowed values:</i> -999999.0						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						
New Water Resource Information : Device Power Type	1	No Information	Enumeration	Unitless	0	The method by the device is powered, if any.

	<i>allowed values:</i> <i>Compressed Air</i> No Information <i>Steam</i>		<i>Electricity</i> Other		<i>Gravity</i> <i>Petroleum Product</i>		<i>Manual</i> <i>Solar</i>
New	Water Resource Information : Device Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the device and the underlying ground (terrain), liquid or waterbody bottom.
	<i>allowed values:</i> <i>Above Surface</i> <i>On Waterbody Bottom</i>		<i>Below Ground Surface</i> Other		No Information <i>Submerged</i>		<i>On Surface</i>
New	Dynamic Water Level	1	-999999.0	REAL	metre	0	The stabilized level of the water table in a well, measured with respect to the surface level and measured after a well has been pumped continuously for several hours.
	<i>allowed values:</i> <i>-999999.0</i>						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> <i>noInformation</i>						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational		Operational
New	Feature Code	1	BH230	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> <i>BH230</i>						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> <i>noInformation</i>						
	Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information		Other				
	Geographic Name Information : Geographic Name Type	2	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original		Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> <i>-999999.0</i>						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> <i>-999999.0</i>						

Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry			Intermittent			No Information Perennial
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
New Pump Depth	1	-999999.0	REAL	metre	0	The measurement from the well head to the top of the submersible pump located within the well borehole.
<i>allowed values:</i> -999999.0						
New Water Resource Information : Pump Type	1	No Information	Enumeration	Unitless	0	The type of pump used to move liquid or semi-liquid material from one location to another.
<i>allowed values:</i> Airlift No Information Turbine			Centrifugal Other Vacuum			Gravity Reciprocating Jet Rotary
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Static Water Level	1	-999999.0	REAL	metre	0	The natural level of the water table in a well, measured with respect to surface level when water is not being actively withdrawn. [Description] May be a positive value when an artesian aquifer is tapped and the resulting pressure is sufficient to raise the water in a connected tube above the surface level.
<i>allowed values:</i> -999999.0						
New Sub-Surface Stratum Type	3	No Information	Enumeration	Unitless	0	Layer of internally consistent consolidated or unconsolidated rock having characteristics that distinguish it from other layers.
<i>allowed values:</i> Basalt Dolomite Karst Mud Sandstone Unconsolidated			Boulders Granite Limestone No Information Schist Volcanic Rock			Clay Gravel Marl Other Semi-consolidated and Consolidated Volcanic Ash Conglomerate Igneous Rock Metamorphic Rock Sand Shale
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
New Terrain Subsurface Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the subsurface layer of the terrain.

allowed values: Basalt
Dolomite
Karst
Mud
Sandstone

Boulders
Granite
Limestone
No Information
Schist

Clay
Gravel
Marl
Other
Shale

Conglomerate
Igneous Rock
Metamorphic Rock
Sand

Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
New Water Resource Information : Water Flow	1	-999999.0	Real	Litres per Minute	0	The rate of water flow through or exiting from a feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable			No Information Treatable			Nonpotable Other
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Seawater			Brackish No Information			Brine Not Applicable Fresh Saline
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic			Commercial Livestock Other			Domestic Irrigation Military Power Generation Industrial Municipal Recreational
Water Well Construction Description	1	No Information	String	Unitless	2E+09	A narrative or other textual description of the screening, casing, and/or finishing of a water well. [Description] A well screen is system of mesh screening or holes designed to allow water to enter a well or borehole without undue loss of flow while excluding sand, silt, and other geologic material. A well casing is a tubular structure placed in the drilled hole to maintain the physical opening from the underground water source to the surface, and also to insulate the passage of water from either loss or pollution in the intervening strata. The casing extends above the surface and protects against surface contaminants entering the water supply by its height and some form of covering.
<i>allowed values:</i> No Information						
Well Type	1	No Information	Enumeration	Unitless	0	The type of a well, generally based on method of construction.
<i>allowed values:</i> Artesian No Information			Drilled Other			Dug Walled-in Dug or Drilled

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature WaterWell (Point)

New ☐ Water Well

A shaft sunk into the ground to reach and tap a supply of water intended for uses other than power generation, heating or the extraction of minerals. [Description] May be, for example, drilled to tap deep underground reservoirs or dug to reach a shallow water table. Dug wells are typically circular, lined with masonry, have a stone border and a structure built above then for lowering and raising a bucket.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aquifer Name	1	No Information	String	Unitless	2E+09	The common or scientific name of an aquifer.
<i>allowed values:</i> No Information						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New Casing Diameter	1	-999999.0	REAL	inches	0	The internal diameter of the inner tubular lining installed within a well borehole and acting as the pump chamber casing. [Description] The casing diameter represents the internal diameter of the pump chamber casing, or the casing that is present between the surface level and the installed pump. If the depth of the pump is unknown the casing diameter at the screened locations is collected. Some wells are constructed with no casing, others may have a single casing and still others may have an outer casing and inner casing. In deep wells or when special conditions exist, the casing diameter may become smaller, or telescope as the well deepens.
<i>allowed values:</i> -999999.0						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.

<i>allowed values:</i> -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other Joint Military and Civilian Private Military Public No Information						
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						
New Water Resource Information : Device Power Type	1	No Information	Enumeration	Unitless	0	The method by the device is powered, if any.
<i>allowed values:</i> Compressed Air No Information Steam Electricity Other Gravity Petroleum Product Manual Solar						
New Water Resource Information : Device Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the device and the underlying ground (terrain), liquid or waterbody bottom.
<i>allowed values:</i> Above Surface On Waterbody Bottom Below Ground Surface Other No Information Submerged On Surface						
New Dynamic Water Level	1	-999999.0	REAL	metre	0	The stabilized level of the water table in a well, measured with respect to the surface level and measured after a well has been pumped continuously for several hours.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational Non-operational Planned Not in Operation Temporarily Non-operational Operational						
New Feature Code	1	BH230	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BH230						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	2	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original
						Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry			Intermittent			No Information Perennial
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.

	<i>allowed values:</i> Construction Intact		Damaged No Information		Destroyed Unmaintained	Dismantled
New Pump Depth	1	-999999.0	REAL	metre	0	The measurement from the well head to the top of the submersible pump located within the well borehole.
	<i>allowed values:</i> -999999.0					
New Water Resource Information : Pump Type	1	No Information	Enumeration	Unitless	0	The type of pump used to move liquid or semi-liquid material from one location to another.
	<i>allowed values:</i> Airlift No Information Turbine		Centrifugal Other Vacuum		Gravity Reciprocating	Jet Rotary
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
	<i>allowed values:</i> U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
	<i>allowed values:</i> No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
	<i>allowed values:</i> noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
	<i>allowed values:</i> noInformation					
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
	<i>allowed values:</i> noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques))' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques))' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
	<i>allowed values:</i> noInformation					
Static Water Level	1	-999999.0	REAL	metre	0	The natural level of the water table in a well, measured with respect to surface level when water is not being actively withdrawn. [Description] May be a positive value when an artesian aquifer is tapped and the resulting pressure is sufficient to raise the water in a connected tube above the surface level.

<i>allowed values:</i> -999999.0							
New	Sub-Surface Stratum Type	3	No Information	Enumeration	Unitless	0	Layer of internally consistent consolidated or unconsolidated rock having characteristics that distinguish it from other layers.
<i>allowed values:</i> Basalt Dolomite Karst Mud Sandstone Unconsolidated				Boulders Granite Limestone No Information Schist Volcanic Rock		Clay Gravel Marl Other Semi-consolidated and Consolidated Volcanic Ash Conglomerate Igneous Rock Metamorphic Rock Sand Shale	
Water Resource Information : Sulfate Concentration		1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0							
Water Resource Information : Temperature		1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0							
New	Terrain Subsurface Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the subsurface layer of the terrain.
<i>allowed values:</i> Basalt Dolomite Karst Mud Sandstone				Boulders Granite Limestone No Information Schist		Clay Gravel Marl Other Shale Conglomerate Igneous Rock Metamorphic Rock Sand	
Water Resource Information : Total Dissolved Solids		1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0							
Unique Entity Identifier		1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation							
<i>allowed values:</i> pimGUID							
Water Resource Information : Water Conductivity		1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0							
New	Water Resource Information : Water Flow	1	-999999.0	Real	Litres per Minute	0	The rate of water flow through or exiting from a feature.
<i>allowed values:</i> -999999.0							
Water Resource Information : Water Hardness		1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0							
Water Resource Information : Water Potability		1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable				No Information Treatable		Nonpotable Other	
Water Resource Information : Water Type		1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.

allowed values:	Alkaline Mineral Seawater		Brackish No Information		Brine Not Applicable	Fresh Saline
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
allowed values:	Agricultural Irrigation Institutional No Information Sanitary Domestic		Commercial Livestock Other		Domestic Irrigation Military Power Generation	Industrial Municipal Recreational
Water Well Construction Description	1	No Information	String	Unitless	2E+09	A narrative or other textual description of the screening, casing, and/or finishing of a water well. [Description] A well screen is system of mesh screening or holes designed to allow water to enter a well or borehole without undue loss of flow while excluding sand, silt, and other geologic material. A well casing is a tubular structure placed in the drilled hole to maintain the physical opening from the underground water source to the surface, and also to insulate the passage of water from either loss or pollution in the intervening strata. The casing extends above the surface and protects against surface contaminants entering the water supply by its height and some form of covering.
allowed values:	No Information					
Well Type	1	No Information	Enumeration	Unitless	0	The type of a well, generally based on method of construction.
allowed values:	Artesian No Information		Drilled Other		Dug Walled-in	Dug or Drilled
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature WaterWellAON (Area)

New ☒ Water Well Area of Numerous

Area of numerous shafts sunk into the ground to reach and tap supply(s) of water intended for uses other than power generation, heating or the extraction of minerals.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aquifer Name	1	No Information	String	Unitless	2E+09	The common or scientific name of an aquifer.
allowed values:	No Information					
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
allowed values:	-999999.0					
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
allowed values:	-999999.0					

	Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
	<i>allowed values:</i> noInformation						
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
	Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<i>allowed values:</i> -999999.0						
	Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<i>allowed values:</i> -999999.0						
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private	Military Public	No Information	
	Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999.0						
New	Water Resource Information : Device Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the device and the underlying ground (terrain), liquid or waterbody bottom.
	<i>allowed values:</i> Above Surface On Waterbody Bottom			Below Ground Surface Other	No Information Submerged	On Surface	
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned	Not in Operation Temporarily Non-operational	Operational	
New	Feature Code	1	NM230	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> NM230						
	Feature Count	1	-999999	Integer	Unitless	0	The number of features of the same type within a defined region. [Description] May be used to indicate the number of features actually present in near proximity to each other although only one representative feature is collected. For example, the number of adjacent pipelines.
	<i>allowed values:</i> -999999						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	2	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
	<i>allowed values:</i> Dry			Intermittent			No Information Perennial
	Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False			No Information			True
	Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
	<i>allowed values:</i> -999999.0						
	Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
	<i>allowed values:</i> -999999.0						
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
New	Water Resource Information : Pump Type	1	No Information	Enumeration	Unitless	0	The type of pump used to move liquid or semi-liquid material from one location to another.
	<i>allowed values:</i> Airlift No Information Turbine			Centrifugal Other Vacuum			Gravity Reciprocating Jet Rotary

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
---	---	---	----------	----------	----	--

allowed values: U

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
---	---	----------------	----------	----------	----	---

allowed values: No Information

Other

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
---	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
--	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
---	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	--

allowed values: noInformation

Static Water Level	1	-999999.0	REAL	metre	0	The natural level of the water table in a well, measured with respect to surface level when water is not being actively withdrawn. [Description] May be a positive value when an artesian aquifer is tapped and the resulting pressure is sufficient to raise the water in a connected tube above the surface level.
--------------------	---	-----------	------	-------	---	--

allowed values: -999999.0

New Sub-Surface Stratum Type	3	No Information	Enumeration	Unitless	0	Layer of internally consistent consolidated or unconsolidated rock having characteristics that distinguish it from other layers.
------------------------------	---	----------------	-------------	----------	---	--

<i>allowed values:</i>	Basalt	Boulders	Clay	Conglomerate
	Dolomite	Granite	Gravel	Igneous Rock
	Karst	Limestone	Marl	Metamorphic Rock
	Mud	No Information	Other	Sand
	Sandstone	Schist	Semi-consolidated and Consolidated Volcanic Ash	Unconsolidated
	Volcanic Rock			

Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
New Terrain Subsurface Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the subsurface layer of the terrain.
<i>allowed values:</i> Basalt Dolomite Karst Mud Sandstone			Boulders Granite Limestone No Information Schist		Clay Gravel Marl Other Shale	Conglomerate Igneous Rock Metamorphic Rock Sand
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
New Water Resource Information : Water Flow	1	-999999.0	Real	Litres per Minute	0	The rate of water flow through or exiting from a feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable			No Information Treatable		Nonpotable	Other
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline			Brackish No Information Seawater		Brine Not Applicable	Fresh Other
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic			Commercial Livestock Other		Domestic Irrigation Military Power Generation	Industrial Municipal Recreational

Water Well Construction Description	1	No Information	String	Unitless	2E+09	A narrative or other textual description of the screening, casing, and/or finishing of a water well. [Description] A well screen is system of mesh screening or holes designed to allow water to enter a well or borehole without undue loss of flow while excluding sand, silt, and other geologic material. A well casing is a tubular structure placed in the drilled hole to maintain the physical opening from the underground water source to the surface, and also to insulate the passage of water from either loss or pollution in the intervening strata. The casing extends above the surface and protects against surface contaminants entering the water supply by its height and some form of covering.
-------------------------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Well Type	1	No Information	Enumeration	Unitless	0	The type of a well, generally based on method of construction.
<u>allowed values:</u>	Artesian		Drilled			Dug
	No Information		Other			Walled-in

Feature Waterwork (Area)

New ☐ Waterwork

An establishment for storing, purifying, and supplying an area or town with water.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<u>allowed values:</u>	No Information					
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<u>allowed values:</u>	-999999.0					
New Annual Flow Rate	1	-999999.0	Real	Cubic Metres per Hours		The annualized rate of water flow through or exiting from a feature.
<u>allowed values:</u>	-999999.0					
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<u>allowed values:</u>	-999999.0					
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<u>allowed values:</u>	-999999.0					
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<u>allowed values:</u>	noInformation					
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<u>allowed values:</u>	[-999999, -999999]					
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.

Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

allowed values: [-999999.0](#)

Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
New Water Resource Information : Water Flow	1	-999999.0	Real	Cubic Metres per Second	0	The rate of water flow through or exiting from a feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable			No Information Treatable			Nonpotable Other
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline			Brackish No Information Seawater			Brine Not Applicable Fresh Other
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic			Commercial Livestock Other			Domestic Irrigation Military Power Generation Industrial Municipal Recreational
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
New Annual Flow Rate	1	-999999.0	Real	Cubic Metres per Hours		The annualized rate of water flow through or exiting from a feature.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other						
Joint Military and Civilian Private						
Military Public						
No Information						

	Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999.0

New	Water Resource Information : Device Relative Location	1	No Information	Enumeration	Unitless	0	The relationship between the device and the underlying ground (terrain), liquid or waterbody bottom.
	<i>allowed values:</i> Above Surface On Waterbody Bottom			Below Ground Surface Other			No Information Submerged On Surface
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	BH220	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BH220						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	2	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						

Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.

<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
New Water Resource Information : Water Flow	1	-999999.0	Real	Cubic Metres per Second	0	The rate of water flow through or exiting from a feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable No Information Nonpotable Other						
<i>allowed values:</i> Potable Treatable

<i>allowed values:</i> Mineral No Information Not Applicable Other						
<i>allowed values:</i> Saline Seawater						
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Commercial Domestic Irrigation Industrial						
<i>allowed values:</i> Institutional Livestock Military Municipal						
<i>allowed values:</i> No Information Other Power Generation Recreational						
<i>allowed values:</i> Sanitary Domestic						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature WindFarm (Area)

New ☐ Wind Farm

A collection of windmotors that are collocated and are organized as a single power generation unit.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AD060	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AD060						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

<u>allowed values:</u> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information							
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information							
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False							
No Information							
True							

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMNonIC
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMOwnerProducer
<i>allowed values:</i>	noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat)' (CSP:Okra) (FMM:Organic Techniques) could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i>	noInformation					
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

allowed values: noInformation*allowed values:* pimGUID

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AJ050	CONSTRAINED_STRING	Unitless	5	Feature Code

<i>allowed values:</i> AJ050							
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation							
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

<i>allowed values:</i> Conventional Native Transliterated Unverified Original				Historical Original No Information Unverified Transliterated			
				Historical Transliterated Other Variant Original			
				Native Original Provisional Variant Transliterated			
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information							
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information							
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False No Information True							

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False No Information True						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact Damaged No Information Destroyed Dismantled Unmaintained						
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Milled Grain No Information Other Water						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMNonIC
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Tower Shape	1	No Information	Enumeration	Unitless	0	The general shape and/or structure of a tower.
<i>allowed values:</i> Mast Tripod			No Information Truss			Other Tubular Tower Mill
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Aluminum Masonry Steel			Brick Metal Stone			Concrete No Information Wood Iron Other
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature WindTurbine (Point) New ☐ Wind Turbine

A tower and associated equipment that generates electrical power from wind.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			<i>No Information</i>			<i>True</i>
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public <i>No Information</i>
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AJ051	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AJ051						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

<i>allowed values:</i>	noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed (' ' and ') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ('). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i>	noInformation					
Tower Shape	1	No Information	Enumeration	Unitless	0	The general shape and/or structure of a tower.
<i>allowed values:</i>	Mast Truss		No Information Tubular			Other Tripod

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Aluminum Metal Wood Concrete No Information Fibreglass Other Iron Steel						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
	Dangerous to Navigation	1	No Information	Boolean	Unitless	0	An indication that a hazard in a waterbody is considered to be dangerous to surface navigation. [Description] For example, broken piles, a rock formation, or a reef in moderately deep waters. For large vessels a depth of less than 20 metres is generally considered to be dangerous.
	<i>allowed values:</i> False			<i>No Information</i>			<i>True</i>
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
New	Feature Code	1	BD180	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BD180						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			<i>Other</i>

	Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
	<i>allowed values:</i> -999999.0						
	Length	1	-999999.0	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AK180	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AK180						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original
						Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained
						Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation
