Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The intended use(s) of a designated hazard protection shelter based on the kind of emergency. [Description] Hazard shelters may be located inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.	
<i>allowed values:</i> Bomb Shelter Storm Shelter			Fallout Shelter			No Information	Other
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.	
<i>allowed values:</i> -999999.0							
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.	
<i>allowed values:</i> -999999.0							
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<i>allowed values:</i> -999999.0							
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i> No Information							
Multi-unit Building	1	No Information	Boolean	Unitless	0	An indication that a building is divided into two or more distinct sets of rooms or other interior spaces that are internally fully-connected while being separated from each other and common areas by controlled access point(s) (for example: lockable doors) that enable physical privacy and security for its occupants. [Description] For example, an apartment building consisting of multiple self-contained residences individually including spaces for personal activities, cooking, eating, sleeping, and (usually) a private bathroom, or an office building housing multiple commercial establishments individually including spaces for reception, meetings, single or open-plan work areas, as well as individual or common-use bathrooms or cafeterias.	
<i>allowed values:</i> False			No Information			True	
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i> No Information							
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.	
<i>allowed values:</i> False			No Information			True	
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.	
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained	Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll	

allowed values: U

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
---	---	----------------	----------	----------	----	---

allowed values: No Information

Other

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
---	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Restriction Information : Security Attributes Group <resource non- intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
---	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Restriction Information : Security Attributes Group <resource owner- producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	---

allowed values: noInformation

Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<u>allowed values:</u> No Information Road			Other			Pedestrian Railway

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
--------------------------	---	---------------	----------------	----------	-----	--

allowed values: noInformationallowed values: pimGUID

Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
---------------------------------	---	---------------	----------------	----------	----	--

allowed values: *noInformation*

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<u>allowed values:</u> <i>No Information</i>						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<u>allowed values:</u> <i>False</i>			<i>No Information</i>			<i>True</i>
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<u>allowed values:</u> <i>-999999.0</i>						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<u>allowed values:</u> <i>-999999.0</i>						
Attached Building	1	No Information	Boolean	Unitless	0	An indication that a building is physically contiguous (for example: shares a common wall) with one or more adjacent buildings. [Description] When a single residence is attached to a single adjacent residence it is considered to be 'semi-detached' and may be termed a 'duplex'. When a single residence is attached to two adjacent residences on opposite sides to form a row it is termed a 'terraced house' or 'row house'.
<u>allowed values:</u> <i>False</i>			<i>No Information</i>			<i>True</i>
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<u>allowed values:</u> <i>noInformation</i>						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<u>allowed values:</u> <i>[-999999, -999999]</i>						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<u>allowed values:</u> <i>Civilian</i> <i>Other</i>			<i>Joint Military and Civilian</i> <i>Private</i>			<i>Military</i> <i>Public</i> <i>No Information</i>
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.

<i>allowed values:</i> <i>noInformation</i>						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> <div> <div>No Information</div> <div>Partially Operational</div> </div> <div> <div>Non-operational</div> <div>Planned</div> </div> <div> <div>Not in Operation</div> <div>Temporarily Non-operational</div> </div> <div> <div>Operational</div> </div>						
New Feature Code	1	AQ080	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> <i>AQ080</i>						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> <div> <div>Customs Checkpoint</div> <div>Inspection Station</div> <div>Pedestrian Transport</div> <div>Road Transport</div> <div>Water Transport</div> </div> <div> <div>Emergency Operations</div> <div>Meeting Place</div> <div>Postal Activities</div> <div>Station</div> </div> <div> <div>Inland Waters Transport</div> <div>No Information</div> <div>Railway Transport</div> <div>Stop</div> </div> <div> <div>Inspection</div> <div>Other</div> <div>Restroom</div> <div>Transfer Hub</div> </div>						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> <i>noInformation</i>						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> <i>No Information</i>						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> <div>No Information</div> <div>Other</div>						
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> <div> <div>Conventional</div> <div>Native Transliterated</div> <div>Unverified Original</div> </div> <div> <div>Historical Original</div> <div>No Information</div> <div>Unverified Transliterated</div> </div> <div> <div>Historical Transliterated</div> <div>Other</div> <div>Variant Original</div> </div> <div> <div>Native Original</div> <div>Provisional</div> <div>Variant Transliterated</div> </div>						
Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The intended use(s) of a designated hazard protection shelter based on the kind of emergency. [Description] Hazard shelters may be located inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
<i>allowed values:</i> <div> <div>Bomb Shelter</div> <div>Storm Shelter</div> </div> <div> <div>Fallout Shelter</div> </div> <div> <div>No Information</div> </div> <div> <div>Other</div> </div>						
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> <i>-999999.0</i>						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> <i>-999999.0</i>						

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Multi-unit Building	1	No Information	Boolean	Unitless	0	An indication that a building is divided into two or more distinct sets of rooms or other interior spaces that are internally fully-connected while being separated from each other and common areas by controlled access point(s) (for example: lockable doors) that enable physical privacy and security for its occupants. [Description] For example, an apartment building consisting of multiple self-contained residences individually including spaces for personal activities, cooking, eating, sleeping, and (usually) a private bathroom, or an office building housing multiple commercial establishments individually including spaces for reception, meetings, single or open-plan work areas, as well as individual or common-use bathrooms or cafeterias.
<i>allowed values:</i> False No Information True						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False No Information True						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact Damaged No Information Destroyed Dismantled Unmaintained						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. <i>allowed values:</i> No Information Road			Other			Pedestrian Railway
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0

Feature FireHydrant (Point)New ☐ Fire Hydrant

An apparatus for drawing water directly from a main, especially alongside a street or road, consisting of a pipe with one or more nozzles or spouts, to which a hose of a fire-engine may be attached.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN ⁻ . These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational

New	Feature Code	1	AL017	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AL017						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information

	<i>allowed values:</i> Conventional Native Transliterated Unverified Original		Other No Information Unverified Transliterated		Historical Original Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated		
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> <i>-999999.0</i>						
Water Resource Information : pH	1	-999999.0	Real	Milligrams per Litre	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> <i>-999999.0</i>						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMCClassificationAll
<i>allowed values:</i> <i>U</i>						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMDissem
<i>allowed values:</i> <i>noInformation</i>						
Restriction Information : Security Attributes Group <resource non- intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMNonIC
<i>allowed values:</i> <i>noInformation</i>						
Restriction Information : Security Attributes Group <resource owner- producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMOwnerProducer
<i>allowed values:</i> <i>noInformation</i>						

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Military Service Branch	1	No Information	Enumeration	Unitless	0	The branch of the armed forces of a nation. [Description] May also be applied to similar organizations following military discipline (for example: a coastguard).
<i>allowed values:</i> Air Force Coastguard No Information			Air National Guard Joint Not Applicable			Army Marines Other
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Permanent	1	No Information	Boolean	Unitless	0	An indication that a feature is permanent. [Description] Temporary features last, or are meant to last, for a limited time only.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.

<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained	Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll	
<i>allowed values:</i> U							
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode	
<i>allowed values:</i> No Information			Other				
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem	
<i>allowed values:</i> noInformation							
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC	
<i>allowed values:</i> noInformation							
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer	
<i>allowed values:</i> noInformation							
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.	
<i>allowed values:</i> noInformation							
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).	
<i>allowed values:</i> noInformation							
<i>allowed values:</i> pimGUID							
Weapons Range Type	3	No Information	Enumeration	Unitless	0	The type of a weapons range based on its intended use(s).	

allowed values:	Demolition Area No Information		Field Artillery Other		Grenade Small Arms	Impact Area Tank
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature FiringRange (Point)

New ☐ Firing Range

A site designated for the purpose of discharging firearms or detonating munitions.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	Real	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
allowed values: -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
allowed values: -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
allowed values: noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
allowed values: [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
allowed values: Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
allowed values: noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
allowed values: No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	FA015	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: FA015						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.

	<i>allowed values:</i>	Defence Activities Recreation		Law Enforcement		No Information	Other
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i>	noInformation					
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i>	No Information		Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.	
	<i>allowed values:</i>	Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i>	-999999.0					
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i>	-999999.0					
	Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
	<i>allowed values:</i>	-999999.0					
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i>	-999999.0					
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i>	No Information					
	Military Service Branch	1	No Information	Enumeration	Unitless	0	The branch of the armed forces of a nation. [Description] May also be applied to similar organizations following military discipline (for example: a coastguard).

New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry Perennial			Ephemeral			Intermittent No Information

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Milligrams per Litre	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Dismantled Unmaintained
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Bivalve Mollusc Mussels			Crustacean No Information			Cultivated Shellfish Fish Other Oysters
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Volume	1	-999999.0	REAL	cubicMetre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						

Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable No Information Treatable Nonpotable Other						
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline Brackish No Information Seawater Brine Not Applicable Fresh Other						
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic Commercial Livestock Other Domestic Irrigation Military Power Generation Industrial Municipal Recreational						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature FishFarmFacility (Point)New ☐ Fish Farm Facility

A facility involved in the breeding (hatching and associated activities) and cultivation (raising for release or harvesting) of fish in tanks or landlocked enclosures. [Description]
Fish species raised on fish farms include, for example, salmon, catfish, tilapia, cod, carp, and trout.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						

	Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
	<i>allowed values:</i> -999999.0						
	Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
	<i>allowed values:</i> noInformation						
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
	Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<i>allowed values:</i> -999999.0						
	Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<i>allowed values:</i> -999999.0						
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private		Military Public	No Information
	Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999.0						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned		Not in Operation Temporarily Non-operational	Operational
New	Feature Code	1	BH051	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BH051

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Volume	1	-999999.0	REAL	cubicMetre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable No Information Treatable Nonpotable Other						
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline Brackish No Information Seawater Brine Not Applicable Fresh Other						
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic Commercial Livestock Other Domestic Irrigation Military Power Generation Industrial Municipal Recreational						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	BB100	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BB100						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Height Above Surface Level	1	-999999.0	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.		
<i>allowed values:</i>	-999999.0							
Length	1	-999999.0	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.		
<i>allowed values:</i>	-999999.0							
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.		
<i>allowed values:</i>	No Information							
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.		
<i>allowed values:</i>	No Information							
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.		
<i>allowed values:</i>	Construction Intact			Damaged No Information			Destroyed Unmaintained	Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISClassificationAll		
<i>allowed values:</i>	U							
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode		
<i>allowed values:</i>	No Information							Other

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i>	noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat)' (CSP:Okra) (FMM:Organic Techniques) could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i>	noInformation					
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

allowed values: noInformation*allowed values:* pimGUID

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature FishWeir (Area)New ☐ Fish Weir

A fence of stakes or wall of stones set in a river or along the shore to direct fish towards fish traps or nets. [Description] The weir is shaped so as to encourage fish to naturally congregate, usually based on river or tidal flow. Although generally consisting of linear segments on rivers, in shore areas one or more components may be curved so as to form an enclosure with a narrow entrance. When constructed of stones the thickness of the wall constitutes a permanent hazard to maritime navigation.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> No Information			Other			Private Public
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BB110	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BB110						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.

allowed values: noInformation

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMOwnerProducer
---	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature Flagpole (Point)

New ☐ Flagpole

A staff or pole on which a flag is raised.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.

allowed values: <i>noInformation</i>							
New	Feature Code	1	AL073	CONSTRAINED_ STRING	Unitless	5	Feature Code
allowed values: <i>AL073</i>							
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
allowed values: <i>noInformation</i>							
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values: <i>No Information</i>							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencl . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
allowed values: <i>No Information</i> <i>Other</i>							
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
allowed values: <i>Conventional</i> <i>Historical Original</i> <i>Historical Transliterated</i> <i>Native Original</i> <i>Native Transliterated</i> <i>No Information</i> <i>Other</i> <i>Provisional</i> <i>Unverified Original</i> <i>Unverified Transliterated</i> <i>Variant Original</i> <i>Variant Transliterated</i>							
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
allowed values: <i>-999999.0</i>							
	Height of Object	1	-999999.0	REAL	metre	0	The vertical distance measured from the base to the top of the feature that gives the greatest value. [Description] For example, the Height of Object of a two story building with a basement is three stories while the Height of Object of a man doesn't change as a result of standing in a trench whereas his Height Above Surface Level (based on the prevailing terrain surface level) may be considered to be correspondingly reduced by the depth of the trench.
allowed values: <i>-999999.0</i>							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
allowed values: <i>-999999.0</i>							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: <i>No Information</i>							
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: <i>No Information</i>							
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values: <i>False</i> <i>No Information</i> <i>True</i>							

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMNonIC
<i>allowed values:</i> noInformation

	<i>allowed values:</i> No Information			Other			
	Guyed	1	No Information	Boolean	Unitless	0	An indication that an object is guided, secured, or steadied by guy wires.
	<i>allowed values:</i> False			No Information			True
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0

<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Concrete Other			Masonry Steel			Metal No Information
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature FloatingDryDock (Area)

New ☐ Floating Dry Dock

A form of dry dock consisting of a floating structure of one or more sections which can be partly submerged by controlled flooding to receive a vessel, then raised by pumping out the water so that the vessel's bottom can be exposed.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	Real	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.

<i>allowed values:</i> No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational		Operational	
New	Feature Code	1	BB199	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i> BB199							
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation							
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	2	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.

<i>allowed values:</i> No Information			Other			Steel	Wood
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. <i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

allowed values: pimGUID

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

[Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact Damaged No Information Destroyed Unmaintained Dismantled						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						

Structural Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.
allowed values:	Brick No Information Rock Wood		Concrete Other Soil			Gravel Prestressed Concrete Steel Masonry Reinforced Concrete Treated Timber
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i>	No Information					
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained Dismantled
	Predominant Average Water Velocity	1	-999999.0	REAL	Metre per Second	0	The average water velocity, exclusive of high water due to runoff or low water due to drought.
	<i>allowed values:</i>	-999999.0					

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Route Pavement Information : Route Surface Composition	1	No Information	Enumeration	Unitless	0	The composition(s) of a durable surface (for example: a pavement) intended to sustain ground traffic (for example: vehicular traffic or foot traffic). [Description] Depending on the traffic situation (for example: on a floor, in a courtyard, or on a road) different compositions may be used, however in general such surfaces are composed of pieces of a hard material fitted closely together (for example: cobble-stone or brick) or of an undivided hard layer (for example: concrete) so as to give a compact, uniform, and smooth surface.
<i>allowed values:</i>	Aggregate		Asphalt			Asphalt over Concrete
	Brick		Cobble-stone			Concrete
	Flexible Pavement		Ice			Macadam
	No Information		Other			Rigid Pavement
	Stabilized Earth		Unimproved			Wood
						Bound Surface
						Corduroy
						Metal
						Snow
						Wood Plank
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.

allowed values:	Caravan Route		Drove		No Information		Other
	Pack-road		Pedestrian		Pipeline Maintenance		Portage
	Power Line Maintenance		Road				
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).	

allowed values: noInformation**allowed values:** pimGUID

Waterbody Depth	1	-999999.0	REAL	Metre	0	The distance, measured vertically upward, from the bottom of an inland waterbody to a reference level datum.	
allowed values: -999999.0							
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumlSMClassificationAll

allowed values: U

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Maritime Bottom Characteristic (First Sediment Colour)	1	No Information	Enumeration	Unitless	0	The general colour of a waterbody sediment based on the Geological Society of America (GSA) rock colour chart and the Munsell colour system. [Description] The Munsell system is based on a colour solid, or approximately a colour sphere, which has a neutral gray central axis grading from white at the top to black at the bottom. This property of lightness is called value. Around the circumference or equator of the solid are the ten major hues, each of which is divided into ten numbered divisions, so that 5 marks the middle of the hue, and 10 marks the boundary between one hue and the next. Thus, any particular hue can be designated by a number and a letter such as 5R or 10YR. Any single vertical section through the neutral gray axis and a particular hue constitutes a colour chart on which the colors grade in value from light at the top to dark at the bottom, and in chroma (degree of saturation) from gray at one edge to the most vivid colors out at the margin. Both value and chroma are numbered so any particular colour can be given a numerical designation representing hue, value, and chroma such as 5R 6/4 and 10YR 8/2. Colour names are based on the Inter-Society Color Council-National Bureau of Standards system of names.
<i>allowed values:</i>

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i>	noInformation					
Maritime Bottom Characteristic (First Material Type)	1	No Information	Enumeration	Unitless	0	The primary type(s) of material composing a feature, exclusive of the surface. [Description] The basis for 'primary' may be, for example, compositional dominance or structural organization.

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature Forest (Area)

New ☐ Forest

A tract of land primarily covered by trees and undergrowth. [Description] The area is sometimes mixed with pasture.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	Real	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Canopy Cover	1	-999999.0	REAL	percent	0	The fraction of canopy cover within a defined area during the season of maximum foliage. [Description] The canopy is formed by the upper branches of the trees in a forest forming a more or less continuous layer.
<i>allowed values:</i> -999999.0						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	EC015	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> EC015						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.

allowed values: noInformation

Foliage Type	1	No Information	Enumeration	Unitless	0	The predominant foliage type of the vegetation.
<i>allowed values:</i> Deciduous Other			Evergreen			Mixed No Information
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Predominant Vegetation Height	1	-999999.0	REAL	metre	0	The predominant height (the height of at least 50 percent) of the vegetation.
<i>allowed values:</i> -999999.0						

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Shelter Belt	1	No Information	Boolean	Unitless	0	An indication that a feature (for example: a linear stand of trees) functions as a shelter belt, protecting other features (for example: roads, railways, cropland, and/or structures) from the effects of adverse weather.
<i>allowed values:</i> False			No Information			True
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Stem Diameter	1	[-999999.0, -999999.0]	REAL_INTERVAL	metre	0	The average diameter of the tree trunks in an area, measured at a height of approximately 1.5 metres or 4.5 feet on the high side (if on a hillside) above the surface of the ground. [Description] Commonly referred to as the 'diameter at breast height' (dbh). For trees up to 2 metres high, the stem diameter is measured at the mid-point between the ground and the stem tip.
<i>allowed values:</i> [-999999.0, -999999.0]						
Tree Spacing	1	[-999999.0, -999999.0]	REAL_INTERVAL	metre	0	The average tree spacing between trees in a stand, determined from centre to centre of adjacent trees.
<i>allowed values:</i> [-999999.0, -999999.0]						
Undergrowth Density	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The fraction of land within a defined area that is covered by undergrowth (for example: scrub, brush, and/or bush).
<i>allowed values:</i> [-999999.0, -999999.0]						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vegetation Species	3	No Information	Enumeration	Unitless	0	The predominant species of a tract of vegetation.
<i>allowed values:</i> Casuarina Filao						
Conifer						
Cypress						
Eucalyptus						
No Information						
Other						
Palm						
Vegetation Trafficability Impact	1	-999999.0	Real	Percent	0	The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
<i>allowed values:</i> -999999.0						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Forest (Line)

New ☐ Forest

A tract of land primarily covered by trees and undergrowth. [Description] The area is sometimes mixed with pasture.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	Real	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Canopy Cover	1	-999999.0	REAL	percent	0	The fraction of canopy cover within a defined area during the season of maximum foliage. [Description] The canopy is formed by the upper branches of the trees in a forest forming a more or less continuous layer.
<i>allowed values:</i> -999999.0						

New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<u>allowed values:</u> [-999999, -999999]						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<u>allowed values:</u> noInformation						
New	Feature Code	1	EC015	CONSTRAINED_STRING	Unitless	5	Feature Code
	<u>allowed values:</u> EC015						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<u>allowed values:</u> noInformation						
	Foliage Type	1	No Information	Enumeration	Unitless	0	The predominant foliage type of the vegetation.
	<u>allowed values:</u> Deciduous Other			Evergreen			Mixed No Information
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Predominant Vegetation Height	1	-999999.0	REAL	metre	0	The predominant height (the height of at least 50 percent) of the vegetation.
<i>allowed values:</i> -999999.0						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Shelter Belt	1	No Information	Boolean	Unitless	0	An indication that a feature (for example: a linear stand of trees) functions as a shelter belt, protecting other features (for example: roads, railways, cropland, and/or structures) from the effects of adverse weather.
<i>allowed values:</i> False			No Information			True

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Stem Diameter	1	[-999999.0, -999999.0]	REAL_INTERVAL	metre	0	The average diameter of the tree trunks in an area, measured at a height of approximately 1.5 metres or 4.5 feet on the high side (if on a hillside) above the surface of the ground. [Description] Commonly referred to as the 'diameter at breast height' (dbh). For trees up to 2 metres high, the stem diameter is measured at the mid-point between the ground and the stem tip.
<i>allowed values:</i> [-999999.0, -999999.0]						
Tree Spacing	1	[-999999.0, -999999.0]	REAL_INTERVAL	metre	0	The average tree spacing between trees in a stand, determined from centre to centre of adjacent trees.
<i>allowed values:</i> [-999999.0, -999999.0]						
Undergrowth Density	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The fraction of land within a defined area that is covered by undergrowth (for example: scrub, brush, and/or bush).
<i>allowed values:</i> [-999999.0, -999999.0]						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vegetation Species	3	No Information	Enumeration	Unitless	0	The predominant species of a tract of vegetation.
<i>allowed values:</i> <div>Casuarina</div> <div>Filao</div> <div>Conifer</div> <div>No Information</div> <div>Cypress</div> <div>Other</div> <div>Eucalyptus</div> <div>Palm</div>						
Vegetation Trafficability Impact	1	-999999.0	Real	Percent	0	The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
<i>allowed values:</i> -999999.0						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0

Feature FortifiedBuilding (Area)

New ☐ Fortified Building

A building that is specifically designed or reinforced to provide for defense from armed attack.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.

allowed values: -999999.0

Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Attached Building	1	No Information	Boolean	Unitless	0	An indication that a building is physically contiguous (for example: shares a common wall) with one or more adjacent buildings. [Description] When a single residence is attached to a single adjacent residence it is considered to be 'semi-detached' and may be termed a 'duplex'. When a single residence is attached to two adjacent residences on opposite sides to form a row it is termed a 'terraced house' or 'row house'.
<i>allowed values:</i> False No Information True						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Manufacturing Information : By-product	3	No Information	Enumeration	Unitless	0	The principal by-product(s) of a production, mining, or agricultural activity. [Description] If multiple by-products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Ash Cinders No Byproduct No Information Other Radioactive Material Refuse Scrap-metal Sewage Slag						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Joint Military and Civilian Military No Information Other Private Public						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Non-operational Not in Operation Operational Partially Operational Planned Temporarily Non-operational						
New Feature Code	1	AH055	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AH055						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Floor Count	1	-999999	Integer	unitless	0	The number of floors in a structure (for example: a building).
	<i>allowed values:</i> -999999						
	Fortified Building Type	1	No Information	Enumeration	Unitless	0	The type of a building that is fortified or reinforced to provide for defense from armed attack.
	<i>allowed values:</i> Blockhouse No Information			Casement Non-specific Fortified			Keep Other Martello Tower Pillbox
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.

<i>allowed values:</i>	Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The intended use(s) of a designated hazard protection shelter based on the kind of emergency. [Description] Hazard shelters may be located inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.	
<i>allowed values:</i>	Bomb Shelter Storm Shelter		Fallout Shelter			No Information	Other
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.	
<i>allowed values:</i>	-999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.	
<i>allowed values:</i>	-999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<i>allowed values:</i>	-999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i>	No Information						
Military Service Branch	1	No Information	Enumeration	Unitless	0	The branch of the armed forces of a nation. [Description] May also be applied to similar organizations following military discipline (for example: a coastguard).	
<i>allowed values:</i>	Air Force Marines		Army Navy			Coastguard No Information	Joint Other
Multi-unit Building	1	No Information	Boolean	Unitless	0	An indication that a building is divided into two or more distinct sets of rooms or other interior spaces that are internally fully-connected while being separated from each other and common areas by controlled access point(s) (for example: lockable doors) that enable physical privacy and security for its occupants. [Description] For example, an apartment building consisting of multiple self-contained residences individually including spaces for personal activities, cooking, eating, sleeping, and (usually) a private bathroom, or an office building housing multiple commercial establishments individually including spaces for reception, meetings, single or open-plan work areas, as well as individual or common-use bathrooms or cafeterias.	
<i>allowed values:</i>	False		No Information			True	
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i>	No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.	
<i>allowed values:</i>	False		No Information			True	
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.	
<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained	Dismantled
Manufacturing Information : Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.	

allowed values:	Aircraft Biochemical Chemical Coke Cotton Electronic Equipment Fluorine Gas Ice Liquefied Natural Gas (LNG) Metal Munitions Nuclear Fuel Petrochemical Petroleum Lubricant Radioactive Material Sewage Sugar Vegetation Product Zinc	Aluminum Biodiesel Clothing Concrete Desalinated Water Explosive Food Glass Iron Liquefied Petroleum Gas (LPG) Milk No Information Olive Oil Petrol Phosphorus Rice Silver Textile Water	Ammunition Brick Coal Consumer Goods Electric Power Fertilizer Frozen Water Gold Lead Lumber Milled Grain No Product Other Petroleum Plastic Rubber Snow Tobacco Whale Products	Asphalt Cement Coffee Copper Electrical Equipment Fish Fruit Heating Steam and/or Water Lime Manganese Motor Vehicle Non-solid Hydrocarbon Fuel Paper Petroleum and/or Natural Gas Prestressed Concrete Salt Steel Uranium Wine		
Manufacturing Information : Raw Material	3	No Information	Enumeration	Unitless	0	The principal 'raw', or input, material(s) involved in a production activity. [Description] If multiple 'raw' materials are specified then they are usually listed in descending order of importance.
allowed values:	Aluminum Chemical Copper Gold Lumber No Raw Material Paper Radioactive Material Snow Tobacco Wood	Asphalt Clay Cotton Ice Manganese Oil Petroleum and/or Natural Gas Rubber Steel Uranium Zinc	Bauxite Coal Gas Iron Metal Ore Plant Material Sewage Sugar Vegetation	Cement Coke Glass Lead No Information Other Plastic Silver Textile Water		
Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).
allowed values:	Depressed	Level	No Information			Raised
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISClassificationAll
allowed values:	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
allowed values:	No Information	Other				
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISDissem

allowed values: *noInformation*

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
--	---	---------------	----------------	----------	-----	---

allowed values: *noInformation*

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
---	---	---------------	----------------	----------	-----	---

allowed values: *noInformation*

Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i> Conical No Information Pyramidal			Domed Other Sawtoothed			Flat Pitched Semi-cylindrical Flat with Clerestory Pitched with Clerestory With Clerestory

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	--

allowed values: *noInformation*

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
--------------------------	---	---------------	----------------	----------	-----	--

allowed values: *noInformation**allowed values:* *pimGUID*

Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Adobe Brick Fibreglass Metal Plant Material Steel			Aluminum Glass Mud-based Construction Prestressed Concrete Stone			Brick Iron No Information Reinforced Concrete Treated Timber Concrete Masonry Other Sod Wood

Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
---------------------------------	---	---------------	----------------	----------	----	--

allowed values: *noInformation*

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Manufacturing Information : By-product	3	No Information	Enumeration	Unitless	0	The principal by-product(s) of a production, mining, or agricultural activity. [Description] If multiple by-products are specified then they are usually listed in descending order of importance.

<i>allowed values:</i> Ash Other Sewage			Cinders Radioactive Material Slag			No Byproduct Refuse	No Information Scrap-metal
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]							
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public	No Information
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation							
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational	Operational
New	Feature Code	1	AH055	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AH055							
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Floor Count	1	-999999	Integer	unitless	0	The number of floors in a structure (for example: a building).
	<i>allowed values:</i> -999999						
	Fortified Building Type	1	No Information	Enumeration	Unitless	0	The type of a building that is fortified or reinforced to provide for defense from armed attack.
	<i>allowed values:</i> Blockhouse No Information			Casement Non-specific Fortified			Keep Other Martello Tower Pillbox
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencl . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.

<i>allowed values:</i>	Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The intended use(s) of a designated hazard protection shelter based on the kind of emergency. [Description] Hazard shelters may be located inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.	
<i>allowed values:</i>	Bomb Shelter Storm Shelter		Fallout Shelter			No Information	Other
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.	
<i>allowed values:</i>	-999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.	
<i>allowed values:</i>	-999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<i>allowed values:</i>	-999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i>	No Information						
Military Service Branch	1	No Information	Enumeration	Unitless	0	The branch of the armed forces of a nation. [Description] May also be applied to similar organizations following military discipline (for example: a coastguard).	
<i>allowed values:</i>	Air Force Marines		Army Navy			Coastguard No Information	Joint Other
Multi-unit Building	1	No Information	Boolean	Unitless	0	An indication that a building is divided into two or more distinct sets of rooms or other interior spaces that are internally fully-connected while being separated from each other and common areas by controlled access point(s) (for example: lockable doors) that enable physical privacy and security for its occupants. [Description] For example, an apartment building consisting of multiple self-contained residences individually including spaces for personal activities, cooking, eating, sleeping, and (usually) a private bathroom, or an office building housing multiple commercial establishments individually including spaces for reception, meetings, single or open-plan work areas, as well as individual or common-use bathrooms or cafeterias.	
<i>allowed values:</i>	False		No Information			True	
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i>	No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.	
<i>allowed values:</i>	False		No Information			True	
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.	
<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained	Dismantled
Manufacturing Information : Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.	

allowed values:	Aircraft Biochemical Chemical Coke Cotton Electronic Equipment Fluorine Gas Ice Liquefied Natural Gas (LNG) Metal Munitions Nuclear Fuel Petrochemical Petroleum Lubricant Radioactive Material Sewage Sugar Vegetation Product Zinc	Aluminum Biodiesel Clothing Concrete Desalinated Water Explosive Food Glass Iron Liquefied Petroleum Gas (LPG) Milk No Information Olive Oil Petrol Phosphorus Rice Silver Textile Water	Ammunition Brick Coal Consumer Goods Electric Power Fertilizer Frozen Water Gold Lead Lumber Milled Grain No Product Other Petroleum Plastic Rubber Snow Tobacco Whale Products	Asphalt Cement Coffee Copper Electrical Equipment Fish Fruit Heating Steam and/or Water Lime Manganese Motor Vehicle Non-solid Hydrocarbon Fuel Paper Petroleum and/or Natural Gas Prestressed Concrete Salt Steel Uranium Wine		
Manufacturing Information : Raw Material	3	No Information	Enumeration	Unitless	0	The principal 'raw', or input, material(s) involved in a production activity. [Description] If multiple 'raw' materials are specified then they are usually listed in descending order of importance.
allowed values:	Aluminum Chemical Copper Gold Lumber No Raw Material Paper Radioactive Material Snow Tobacco Wood	Asphalt Clay Cotton Ice Manganese Oil Petroleum and/or Natural Gas Rubber Steel Uranium Zinc	Bauxite Coal Gas Iron Metal Ore Plant Material Sewage Sugar Vegetation	Cement Coke Glass Lead No Information Other Plastic Silver Textile Water		
Relative Level	1	No Information	Enumeration	Unitless	0	The relationship of the elevation of the terrain surface of or at the base of the feature and that of the surrounding terrain. [Description] The terrain may be either dry or submerged (for example: a waterbody bottom).
allowed values:	Depressed	Level	No Information			Raised
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISClassificationAll
allowed values:	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
allowed values:	No Information	Other				
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISDissem

allowed values: noInformation

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
--	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
---	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i> Conical No Information Pyramidal			Domed Other Sawtoothed			Flat Pitched Semi-cylindrical Flat with Clerestory Pitched with Clerestory With Clerestory

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	--

allowed values: noInformation

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
--------------------------	---	---------------	----------------	----------	-----	--

allowed values: noInformation*allowed values:* pimGUID

Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Adobe Brick Fibreglass Metal Plant Material Steel			Aluminum Glass Mud-based Construction Prestressed Concrete Stone			Brick Iron No Information Reinforced Concrete Treated Timber Concrete Masonry Other Sod Wood

Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
---------------------------------	---	---------------	----------------	----------	----	--

allowed values: noInformation

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Length	1	-999999.0	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> <i>-999999.0</i>						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> <i>No Information</i>						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> <i>No Information</i>						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<u>allowed values:</u> <i>U</i>						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<u>allowed values:</u> <i>No Information</i> Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<u>allowed values:</u> <i>noInformation</i>						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature FoulGround (Point)

New ☐ Foul Ground

A region over which it is safe to navigate but which should be avoided for anchoring, intentional grounding, or ground fishing.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Dangerous to Navigation	1	No Information	Boolean	Unitless	0	An indication that a hazard in a waterbody is considered to be dangerous to surface navigation. [Description] For example, broken piles, a rock formation, or a reef in moderately deep waters. For large vessels a depth of less than 20 metres is generally considered to be dangerous.
<i>allowed values:</i> False			No Information			True
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	BD050	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BD050						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						

Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False No Information True						
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Milligrams per Litre	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact Damaged No Information Destroyed Dismantled Unmaintained						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Volume	1	-999999.0	REAL	cubicMetre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						

Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable No Information Treatable Nonpotable Other						
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline Brackish No Information Seawater Brine Not Applicable Fresh Other						
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic Commercial Livestock Other Domestic Irrigation Military Power Generation Industrial Municipal Recreational						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999.0

Feature Fountain (Point)New ☐ Fountain

A monumental and/or ornamental structure containing moving water, often including jets, falls, or other decorative features. [Description] The structure is often of a civic nature; the water is typically recirculated.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						

New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
	Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
	<i>allowed values:</i> -999999.0						
	Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
	<i>allowed values:</i> -999999.0						
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private		Military Public	No Information
	Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999.0						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned		Not in Operation Temporarily Non-operational	Operational
New	Feature Code	1	BH075	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BH075						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated

Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.

Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic Commercial Livestock Other Domestic Irrigation Military Power Generation Industrial Municipal Recreational						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature FuelStorageFacility (Area)New ☐ Fuel Storage Facility

A facility for the storage of fuel (for example: jet fuel, gasoline, or diesel oil). [Description] The fuel is typically stored in large tanks that may be partially or wholly buried and is accompanied by metering and dispensing equipment. Facilities may range in size from a small stockpile of drums (sometimes termed a 'fuel dump') to a large perimeter-controlled site with multiple permanent surface tanks, in-ground pipelines and associated equipment (sometimes termed a 'fuel depot').

New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<u>allowed values:</u> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> No Information Other						
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.

Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.	
<i>allowed values:</i> -999999.0							
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.	
<i>allowed values:</i> -999999.0							
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<i>allowed values:</i> -999999.0							
Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.	
<i>allowed values:</i> False			No Information			True	
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i> No Information							
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i> No Information							
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.	
<i>allowed values:</i> False			No Information			True	
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.	
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained	Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMClassificationAll	
<i>allowed values:</i> U							
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode	
<i>allowed values:</i> No Information			Other				

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i>	noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat)' (CSP:Okra) (FMM:Organic Techniques) could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i>	noInformation					
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

allowed values: noInformation*allowed values:* pimGUID

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Other Transport						
Railway Transport Water Transport						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<u>allowed values:</u> <i>noInformation</i>						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> No Information						
Other						
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> <i>-999999.0</i>						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> <i>-999999.0</i>						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> <i>-999999.0</i>						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> <i>False</i>						
No Information						
<i>True</i>						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.

	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<i>allowed values:</i> False			No Information			True

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumSMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumSMNonIC
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumSMOwnerProducer
<i>allowed values:</i>	noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat)' (CSP:Okra) (FMM:Organic Techniques) could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i>	noInformation					
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
---------------------------------	---	---------------	----------------	----------	----	--

allowed values: noInformation

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
-----------------------------	---	----------------	-------------	----------	---	---

	<i>allowed values:</i> No Information Partially Operational		Non-operational Planned			Not in Operation Temporarily Non-operational	Operational
New Feature Code	1	AP040	CONSTRAINED_ STRING	Unitless	5	Feature Code	
<i>allowed values:</i> AP040							
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.	
<i>allowed values:</i> Agriculture Other Transport			Botanical and/or Zoological Reserve Activities Public Order			Immigration Control Public Order, Safety and Security Services	No Information Security Services
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.	
<i>allowed values:</i> noInformation							
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.	
<i>allowed values:</i> No Information							
Gate Use	1	No Information	Enumeration	Unitless	0	The type of a gate (or similar route barrier) based on its intended use.	
<i>allowed values:</i> Border Crossing Other			Crossing Toll-gate			Entrance	No Information
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information							
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information							
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact		Damaged No Information		Destroyed Unmaintained		Dismantled	

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Route Total Usable Width	1	-999999.0	REAL	metre	0	The total usable width of the travelled way of a route. [Description] Includes pavements and shoulders.
<i>allowed values:</i> -999999.0						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Thickness	1	-999999.0	REAL	metre	0	The distance between the two opposite surfaces of an object, usually the distance of smallest measure. [Description] The third dimension of an object, distinct from length and width (breadth).
<i>allowed values:</i> -999999.0						
Transportation System Type	3	No Information	Enumeration	Unitless	0	The type of a transportation system based on the type(s) of vehicles employed and/or the nature(s) of the objects transported.
<i>allowed values:</i> Bus Railway			No Information Road			Other Truck Pedestrian Underground Railway

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature GaugingStation (Point)

New ☐ Gauging Station

A device that monitors river flow and/or depth, and any associated support structures.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Average Water Depth	1	[-999999.0, -999999.0]	Real_Interval	Metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999.0, -999999.0]						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information

	Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
	<i>allowed values:</i> -999999.0						
	Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
	<i>allowed values:</i> -999999.0						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New	Feature Code	1	BI070	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BI070						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	2	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<i>allowed values:</i> No Information						

Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> <div>Construction Intact</div> <div>Damaged No Information</div> <div>Destroyed Unmaintained</div> <div>Dismantled</div>						
Predominant Average Water Velocity	1	-999999.0	REAL	Metre per Second	0	The average water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i> -999999.0						
Predominant Maximum Water Depth	1	-999999.0	REAL	Metre	0	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> -999999.0						
Predominant Maximum Water Velocity	1	-999999.0	REAL	Metre per Second	0	The average maximum (seasonal high water) water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i> -999999.0						
Predominant Minimum Water Depth	1	-999999.0	REAL	Metre	0	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> -999999.0						
Predominant Minimum Water Velocity	1	-999999.0	REAL	Metre per Second	0	The average minimum (seasonal low water) water velocity, exclusive of high water due to runoff or low water due to drought.
<i>allowed values:</i> -999999.0						
Predominant Water Depth	1	[-999999.0, -999999.0]	Real_Interval	Metre	0	The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999.0, -999999.0]						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
New Water Resource Information : Water Flow	1	-999999.0	Real	Cubic Metres per Second	0	The rate of water flow through or exiting from a feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						

Water Resource Information : Water Type 1 No Information Enumeration Unitless 0 The type of available water based on its composition.

allowed values: Alkaline Brackish Brine Fresh
Mineral No Information Not Applicable Other
Saline Seawater

Feature GeodeticPoint (Point)

New ☐ Geodetic Point

A physical point on the Earth's surface having a known position (for example: as determined by survey) and established as part of a geodetic network. [Description] For example, a triangulation (trig) point.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
allowed values: noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
allowed values: [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
allowed values: noInformation						
New Feature Code	1	ZB060	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: ZB060						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
allowed values: noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values: No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
allowed values: No Information			Other			

Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original
						Native Original Provisional Variant Transliterated
Highest Elevation	1	-999999.0	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature GeologicFault (Line)

New ☐ Geologic Fault

A fracture or zone of fractures in a rock formation, marked by the relative displacement on either side of the plane of the fracture. [Description] The intersection of a geologic fault with the ground surface is termed the 'fault trace' and is commonly plotted on maps to represent a fault. Since geologic faults do not usually consist of a single, clean fracture, the term 'fault zone' (or 'distributed fault') is often used when referring to the zone of complex deformation and numerous small fractures that is associated with the fault plane.

Feature GeopoliticalEntity (Area)

New ☐ Geopolitical Entity

A region controlled by a political community having an organized government and possessing internal and external sovereignty, most often as a State but sometimes having a dependent relationship on another political authority or a special sovereignty status. [Description] The degree of sovereignty may be limited in specific areas (for example: matters of economic, administrative, legislative, judicial, military and/or foreign policy). The region controlled by a sovereign geopolitical entity is commonly referred to as a 'country'.

<i>allowed values:</i> Area of No Sovereignty Economic Region No Information Territory			Buffer Zone Freely Associated State Other Zone of Occupation			Demilitarized Zone (DMZ) Independent Political Entity Political Entity Dependent Political Entity Leased Area Semi-independent Political Entity
Geopolitical Entity Designation : ISO 3166-1 English Name	1	No Information	String	Unitless	200	The International Organization for Standardization (ISO 3166-1) full name that designates a geopolitical entity (for example: a State).
<i>allowed values:</i> No Information						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature GeothermalOutlet (Area)

New ☐ Geothermal Outlet

A terrain surface feature controlled by or derived from the heat of the Earth's interior. [Description] For example, a hot spring.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aquifer Name	1	No Information	String	Unitless	2E+09	The common or scientific name of an aquifer.
<i>allowed values:</i> No Information						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.

allowed values: -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
allowed values: -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
allowed values: noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
allowed values: [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
allowed values: -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
allowed values: -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
allowed values: Civilian Other			Joint Military and Civilian Private		Military Public No Information	
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
allowed values: -999999.0						
Direction of Flow	1	-999999.0	REAL	arcDegree	0	The bearing of movement or direction of the flow.
allowed values: -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
allowed values: noInformation						
New Feature Code	1	DB115	CONSTRAINED_STRING	Unitless	5	Feature Code
allowed values: DB115						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
allowed values: noInformation						
Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values: No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (":"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
allowed values: No Information			Other			

Geographic Name Information : Geographic Name Type	3	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Geothermal Outlet Type	1	No Information	Enumeration	Unitless	0	The type of a geothermal outlet based on its morphology.
<i>allowed values:</i> Fissure No Information			Fumarole Other			Geyser Sulphur Spring Hot Spring
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999.0						
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry Perennial			Ephemeral			Intermittent No Information
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMCClassificationAll
<i>allowed values:</i> U						

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						

Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
New Water Resource Information : Water Flow	1	-999999.0	Real	Litres per Minute	0	The rate of water flow through or exiting from a feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> No Information			Nonpotable	Other		
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline			Brackish No Information Seawater	Brine Not Applicable		
				Fresh Other		
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic			Commercial Livestock Other	Domestic Irrigation Military Power Generation		
				Industrial Municipal Recreational		
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<u>allowed values:</u> -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<u>allowed values:</u> Civilian Other			Joint Military and Civilian Private		Military Public No Information	
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<u>allowed values:</u> -999999.0						
Direction of Flow	1	-999999.0	REAL	arcDegree	0	The bearing of movement or direction of the flow.
<u>allowed values:</u> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<u>allowed values:</u> noInformation						
New Feature Code	1	DB115	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> DB115						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<u>allowed values:</u> noInformation						
Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> No Information			Other			

Geographic Name Information : Geographic Name Type	3	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Geothermal Outlet Type	1	No Information	Enumeration	Unitless	0	The type of a geothermal outlet based on its morphology.
<i>allowed values:</i> Fissure No Information			Fumarole Other			Geyser Sulphur Spring Hot Spring
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<i>allowed values:</i> -999999.0						
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry Perennial			Ephemeral			Intermittent No Information
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMCClassificationAll
<i>allowed values:</i> U						

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						

Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
New Water Resource Information : Water Flow	1	-999999.0	Real	Litres per Minute	0	The rate of water flow through or exiting from a feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> No Information			Nonpotable	Other		
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline			Brackish No Information Seawater	Brine Not Applicable		
				Fresh Other		
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic			Commercial Livestock Other	Domestic Irrigation Military Power Generation		
				Industrial Municipal Recreational		
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature **GolfCourse (Area)** New ☐ Golf Course

A tract of land on which golf is played.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AK100	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AK100						

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<u>allowed values:</u> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information			True
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<u>allowed values:</u> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
	<u>allowed values:</u> U						

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature GrainElevator (Area)New ☐ Grain Elevator**A tall structure, equipped for loading, unloading, processing, and/or storing grain.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i> False			No Information			True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AM030	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AM030						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original
						Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained
						Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i> Conical Other			Domed Pitched			Flat Pyramidal No Information Semi-cylindrical
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						

Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i>	Aluminum Metal Reinforced Concrete		Concrete No Information Steel			Iron Other Wood Masonry Prestressed Concrete
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i>	noInformation					
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999.0

Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i> Conical Other			Domed Pitched			Flat Pyramidal No Information Semi-cylindrical

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	---

allowed values: noInformation

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
--------------------------	---	---------------	----------------	----------	-----	--

allowed values: noInformation

allowed values: pimGUID

Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i> Aluminum Metal Reinforced Concrete			Concrete No Information Steel			Iron Other Wood Masonry Prestressed Concrete

Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
---------------------------------	---	---------------	----------------	----------	----	--

allowed values: noInformation

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
-------	---	-----------	------	-------	---	--

Feature GrainStorageStructure (Area)

New ☐ Grain Storage Structure

An enclosed container, used for storing grain or fodder.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.

	<i>allowed values:</i> False		No Information		True	
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
	<i>allowed values:</i> -999999.0					
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
	<i>allowed values:</i> -999999.0					
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
	<i>allowed values:</i> noInformation					
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]					
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian Other		Joint Military and Civilian Private		Military Public	No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation					
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational	Operational
New Feature Code	1	AM020	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AM020					
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation					
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information					
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information		Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.

allowed values: -999999.0

Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
-------------------	---	-----------	------	-------	---	---

allowed values: -999999.0

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
--------	---	-----------	------	-------	---	--

allowed values: -999999.0

Located Underground	1	No Information	Boolean	Unitless	0	The feature (for example: a parking garage, storage tank, or a transportation station) is located underground.
---------------------	---	----------------	---------	----------	---	--

allowed values: False

No Information

True

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
-------------------	---	----------------	--------	----------	-------	---

allowed values: No Information

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
---	---	----------------	--------	----------	----	--

allowed values: No Information

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
---------------------	---	----------------	---------	----------	---	---

allowed values: False

No Information

True

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
--------------------	---	----------------	-------------	----------	---	--

allowed values: Construction
IntactDamaged
No InformationDestroyed
Unmaintained

Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
---	---	---	----------	----------	----	--

allowed values: U

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
---	---	----------------	----------	----------	----	---

allowed values: No Information

Other

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
---	---	---------------	----------------	----------	-----	---

allowed values: noInformation

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i> Conical Other			Domed Pitched			Flat Pyramidal No Information Semi-cylindrical
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation

	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information			True
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<u>allowed values:</u> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i> Conical Other			Domed Pitched			Flat Pyramidal No Information Semi-cylindrical
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						

Vertical Construction Material	3	No Information	Enumeration	Unitless	0	The type(s) of material that compose the load-bearing structure and/or exterior facing of a vertical construction (for example: a building or non-building structure).
<i>allowed values:</i>	Aluminum Metal Reinforced Concrete		Concrete No Information Steel			Iron Other Wood Masonry Prestressed Concrete
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i>	noInformation					
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

allowed values: -999999.0

Feature Grandstand (Area)

New ☐ Grandstand

A structure for special viewing of outdoor events, usually roofed, that has tiers of seats or standing room for spectators.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.
<i>allowed values:</i>	False					No Information True
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i>	-999999.0					
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i>	-999999.0					
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i>	noInformation					
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i>	[-999999, -999999]					
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i>	Civilian Other		Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.

<i>allowed values:</i> <i>noInformation</i>						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> <div> <div>No Information</div> <div>Partially Operational</div> </div> <div> <div>Non-operational</div> <div>Planned</div> </div> <div> <div>Not in Operation</div> <div>Temporarily Non-operational</div> </div> <div> <div>Operational</div> </div>						
New Feature Code	1	AK110	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> <i>AK110</i>						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> <i>noInformation</i>						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> <i>No Information</i>						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> <i>No Information</i> <i>Other</i>						
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> <div> <div>Conventional</div> <div>Native Transliterated</div> <div>Unverified Original</div> </div> <div> <div>Historical Original</div> <div>No Information</div> <div>Unverified Transliterated</div> </div> <div> <div>Historical Transliterated</div> <div>Other</div> <div>Variant Original</div> </div> <div> <div>Native Original</div> <div>Provisional</div> <div>Variant Transliterated</div> </div>						
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> <i>-999999.0</i>						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> <i>-999999.0</i>						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> <i>-999999.0</i>						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> <i>No Information</i>						

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i>	No Information		Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i>	Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i>	-999999.0					
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i>	-999999.0					
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i>	-999999.0					
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.

<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False No Information True						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact Damaged No Information Destroyed Unmaintained Dismantled						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEONT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

allowed values: *noInformation*

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i>	noInformation					
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.

Feature Greenhouse (Area)New ☐ Greenhouse

A structure, sometimes recognized as a building, constructed primarily of transparent material (for example: glass or plastic), in which temperature and humidity can be controlled for the cultivation and/or protection of plants. [Description] Greenhouses can range in size from very large conservatories such as the Palm House at Kew Gardens in England to row covers. Many of the large public greenhouse conservatories are used for growing tender and rare plants. Commercial greenhouses are often state-of-the-art production facilities for vegetables or flowers. Row covers and similar structures are usually made of a lightweight transparent material placed directly above rows of crops on a supporting framework to form a low tunnel. The transparent materials on these structures may be temporary being removed once the crop is well-established. At times, the entire structure may be removed.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.

<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational

New	Feature Code	1	AJ110	CONSTRAINED_STRING	Unitless	5	Feature Code
	<u>allowed values:</u>	AJ110					
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
	<u>allowed values:</u>	Agriculture Growing of Crops					
				Amusement No Information			Botanical and/or Zoological Reserve Activities Education Other
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<u>allowed values:</u>	noInformation					
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u>	No Information					
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencl . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u>	No Information					
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u>	Conventional Native Transliterated Unverified Original					
				Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u>	-999999.0					
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u>	-999999.0					
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u>	-999999.0					
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u>	No Information					
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u>	No Information					

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMOwnerProducer
<i>allowed values:</i> noInformation						
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i> Conical No Information Pyramidal			Domed Other Sawtoothed			Flat Pitched Semi-cylindrical Flat with Clerestory Pitched with Clerestory With Clerestory
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

allowed values: noInformation

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

allowed values: noInformation*allowed values:* pimGUID

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Greenhouse (Point)

New ☐ Greenhouse

A structure, sometimes recognized as a building, constructed primarily of transparent material (for example: glass or plastic), in which temperature and humidity can be controlled for the cultivation and/or protection of plants. [Description] Greenhouses can range in size from very large conservatories such as the Palm House at Kew Gardens in England to row covers. Many of the large public greenhouse conservatories are used for growing tender and rare plants. Commercial greenhouses are often state-of-the-art production facilities for vegetables or flowers. Row covers and similar structures are usually made of a lightweight transparent material placed directly above rows of crops on a supporting framework to form a low tunnel. The transparent materials on these structures may be temporary being removed once the crop is well-established. At times, the entire structure may be removed.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Attached Building	1	No Information	Boolean	Unitless	0	An indication that a building is physically contiguous (for example: shares a common wall) with one or more adjacent buildings. [Description] When a single residence is attached to a single adjacent residence it is considered to be 'semi-detached' and may be termed a 'duplex'. When a single residence is attached to two adjacent residences on opposite sides to form a row it is termed a 'terraced house' or 'row house'.

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Gridiron (Area)

New ☐ Gridiron**A timber structure in the intertidal zone serving as a support for vessels at low stages of the tide to permit work on the exposed portion of the vessel's hull.**

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BB115	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BB115						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed (' ' and ') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated	
Height Above Surface Level	1	-999999.0	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						

Highest Elevation	1	-999999.0	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False No Information True						
Predominant Vegetation Height	1	-999999.0	REAL	Metre	0	The predominant height (the height of at least 50 percent) of the vegetation.
<i>allowed values:</i> -999999.0						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. <i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Shelter Belt	1	No Information	Boolean	Unitless	0	An indication that a feature (for example: a linear stand of trees) functions as a shelter belt, protecting other features (for example: roads, railways, cropland, and/or structures) from the effects of adverse weather.
<i>allowed values:</i> False			No Information			True
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Stem Diameter	1	[-999999.0, -999999.0]	REAL_Interval	Unitless	0	The average diameter of the tree trunks in an area, measured at a height of approximately 1.5 metres or 4.5 feet on the high side (if on a hillside) above the surface of the ground. [Description] Commonly referred to as the 'diameter at breast height' (dbh). For trees up to 2 metres high, the stem diameter is measured at the mid-point between the ground and the stem tip.
<i>allowed values:</i> [-999999.0, -999999.0]						
Summer Canopy Cover	1	-999999.0	REAL	Percent	0	The fraction of canopy cover within a defined area during the summer season. [Description] The canopy is formed by the upper branches of the trees in a forest forming a more or less continuous layer.
<i>allowed values:</i> -999999.0						
Tree Spacing	1	[-999999.0, -999999.0]	REAL_Interval	Unitless	0	The average tree spacing between trees in a stand, determined from centre to centre of adjacent trees.
<i>allowed values:</i> [-999999.0, -999999.0]						
Undergrowth Density	1	[-999999.0, -999999.0]	REAL_Interval	Unitless	0	The fraction of land within a defined area that is covered by undergrowth (for example: scrub, brush, and/or bush).
<i>allowed values:</i> [-999999.0, -999999.0]						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vegetation Species	3	No Information	Enumeration	Unitless	0	The predominant species of a tract of vegetation.
<i>allowed values:</i> Casuarina Eucalyptus No Information Pine			Coconut Filao Olive			Conifer Mangrove Other Cypress Nipa Palm
Vegetation Trafficability Impact	1	-999999.0	Real	Percent	0	The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
<i>allowed values:</i> -999999.0						

Width	1	-999999.0	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
-------	---	-----------	------	-------	---	--

allowed values: -999999.0

Winter Canopy Cover	1	-999999.0	REAL	Percent	0	The fraction of canopy cover within a defined area during the winter season. [Description] The canopy is formed by the upper branches of the trees in a forest forming a more or less continuous layer.
---------------------	---	-----------	------	---------	---	---

allowed values: -999999.0

Feature Grove (Point)

New ☐ Grove

A small wood or similar collection of trees growing closely together. [Description] May occur naturally or be deliberately planted for shade, ornamentation, and/or as an orchard (for example: of olives or citrus fruit).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	Square Metre	0	The area within the delineation of the feature.
<u>allowed values:</u> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<u>allowed values:</u> noInformation						
Canopy Cover	1	-999999.0	REAL	Percent	0	The fraction of canopy cover within a defined area during the season of maximum foliage. [Description] The canopy is formed by the upper branches of the trees in a forest forming a more or less continuous layer.
<u>allowed values:</u> -999999.0						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<u>allowed values:</u> [-999999, -999999]						
Conspicuous Air Category	1	No Information	Enumeration	Unitless	0	The manner in which an object is conspicuous when viewed from the air. [Description] A conspicuous feature is easily detected and identified under varying conditions (for example: lighting). Factors affecting conspicuousness include size, shape, and/or height.
<u>allowed values:</u> No Information			Not Conspicuous			Visual
Conspicuous Ground Category	1	No Information	Enumeration	Unitless	0	The manner in which an object is conspicuous when viewed from on the ground. [Description] A conspicuous feature is easily detected and identified under varying conditions (for example: lighting). Factors affecting conspicuousness include size, shape, and/or height.
<u>allowed values:</u> No Information			Not Conspicuous			Visual
Conspicuous Sea Category	1	No Information	Enumeration	Unitless	0	The manner in which an object is conspicuous when viewed from the sea. [Description] A conspicuous feature is easily detected and identified under varying conditions (for example: lighting). Factors affecting conspicuousness include size, shape, and/or height.
<u>allowed values:</u> No Information			Not Conspicuous			Visual
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<u>allowed values:</u> noInformation						

New	Feature Code	1	EC050	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i>	EC050					
	Feature Element Orientation	1	-999999.0	REAL	Arc Degree	0	The angular distance measured from true north (0 degrees) clockwise to the predominant linear pattern of the elements within a feature.
	<i>allowed values:</i>	-999999.0					
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i>	noInformation					
	Foliage Type	1	No Information	Enumeration	Unitless	0	The predominant foliage type of the vegetation.
	<i>allowed values:</i>	Deciduous Other		Evergreen		Mixed No Information	
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i>	No Information					
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i>	No Information		Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i>	Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	
	Height Above Surface Level	1	-999999.0	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i>	-999999.0					
	Highest Elevation	1	-999999.0	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i>	-999999.0					
	Length	1	-999999.0	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i>	-999999.0					
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i>	No Information					

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False No Information True						
Predominant Vegetation Height	1	-999999.0	REAL	Metre	0	The predominant height (the height of at least 50 percent) of the vegetation.
<i>allowed values:</i> -999999.0						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Shelter Belt	1	No Information	Boolean	Unitless	0	An indication that a feature (for example: a linear stand of trees) functions as a shelter belt, protecting other features (for example: roads, railways, cropland, and/or structures) from the effects of adverse weather.
<i>allowed values:</i> False No Information True						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

<i>allowed values:</i> noInformation						
Stem Diameter	1	[-999999.0, -999999.0]	REAL_Interval	Unitless	0	The average diameter of the tree trunks in an area, measured at a height of approximately 1.5 metres or 4.5 feet on the high side (if on a hillside) above the surface of the ground. [Description] Commonly referred to as the 'diameter at breast height' (dbh). For trees up to 2 metres high, the stem diameter is measured at the mid-point between the ground and the stem tip.
<i>allowed values:</i> [-999999.0, -999999.0]						
Summer Canopy Cover	1	-999999.0	REAL	Percent	0	The fraction of canopy cover within a defined area during the summer season. [Description] The canopy is formed by the upper branches of the trees in a forest forming a more or less continuous layer.
<i>allowed values:</i> -999999.0						
Tree Spacing	1	[-999999.0, -999999.0]	REAL_Interval	Unitless	0	The average tree spacing between trees in a stand, determined from centre to centre of adjacent trees.
<i>allowed values:</i> [-999999.0, -999999.0]						
Undergrowth Density	1	[-999999.0, -999999.0]	REAL_Interval	Unitless	0	The fraction of land within a defined area that is covered by undergrowth (for example: scrub, brush, and/or bush).
<i>allowed values:</i> [-999999.0, -999999.0]						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vegetation Species	3	No Information	Enumeration	Unitless	0	The predominant species of a tract of vegetation.
<i>allowed values:</i> <div> <div>Casuarina</div> <div>Eucalyptus</div> <div>No Information</div> <div>Pine</div> </div> <div> <div>Coconut</div> <div>Filao</div> <div>Olive</div> </div> <div> <div>Conifer</div> <div>Mangrove</div> <div>Other</div> </div> <div> <div>Cypress</div> <div>Nipa</div> <div>Palm</div> </div>						
Vegetation Trafficability Impact	1	-999999.0	Real	Percent	0	The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
<i>allowed values:</i> -999999.0						
Width	1	-999999.0	REAL	Metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Winter Canopy Cover	1	-999999.0	REAL	Percent	0	The fraction of canopy cover within a defined area during the winter season. [Description] The canopy is formed by the upper branches of the trees in a forest forming a more or less continuous layer.

Feature Harbour (Area)

New ☐ Harbour

A natural or artificial improved body of water providing protection for vessels and generally anchorage and docking facilities. [Description] A harbour consists of both its port and its waters.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> No Information			Other			Private Public
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BB005	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BB005						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	2	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other

Harbour Facility Function	3	No Information	Enumeration	Unitless	0	The primary function(s) of harbour facilities that are associated with a service or commercial operation of public interest.

allowed values:	Bulk Terminal Marina Passenger Terminal Timber-yard		Container Terminal Naval Base Ro-Ro Terminal	Ferry Terminal No Information Shipyard	Fishing Harbour Other Tanker Terminal		
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
allowed values: -999999.0							
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
allowed values: No Information							
Geographic Name Information : Name Identifier	2	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
allowed values: No Information							
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.	
allowed values: False							
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.	
allowed values: Construction Intact							
Restriction Information : Security Attributes Group <resource classification>	1	U	Damaged No Information CodeList	Destroyed Unmaintained	Dismantled	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
allowed values: U							
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode	
allowed values: No Information							
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	Other StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem	
allowed values: noInformation							
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC	
allowed values: noInformation							

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ('). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Tide Influenced	1	No Information	Boolean	Unitless	0	An indication that a waterbody is affected by the tide.
<i>allowed values:</i> False			No Information			True
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
World Port Index Identifier	1	No Information	String	Unitless	14	The unique identifier element in the NGA World Port Index (Publication 150). [Description] The World Port Index lists all of the major shipping ports in the world, giving all the information (for example: latitude and longitude, facilities information, tidal data, and customs information) that a ship captain might need to prepare for a visit.

Feature HarbourWaters (Area)

New ☒ Harbour Waters

A natural or artificial improved body of water providing protection for vessels and usually associated with a port.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN ⁻ . These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	BB008	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BB008						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

<i>allowed values:</i> No Information			Other			
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<i>allowed values:</i> Dry Perennial			<i>Ephemeral</i>			Intermittent No Information
Length	1	-999999.0	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. Feature HardenedAircraftShelter (Area)

New ☐ Hardened Aircraft Shelter

A hardened structure built above or partially above ground that encloses aircraft to provide protection from enemy attack. [Description] The shelter is closed by blast resistant doors and is generally limited in size, only accommodating one or two relatively smaller (for example: fighter) aircraft. Those built to NATO specifications are designed to withstand a direct hit by a 226 kilogram bomb.

<i>allowed values:</i> GB250							
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Air Transport Defence Activities Warehousing and Storage		Aircraft Repair Emergency Operations		Armory No Information		Cargo Handling Other	
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information		Other					
	Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The intended use(s) of a designated hazard protection shelter based on the kind of emergency. [Description] Hazard shelters may be located inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
<i>allowed values:</i> Bomb Shelter Storm Shelter		Fallout Shelter		No Information		Other	
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information							
	Multi-unit Building	1	No Information	Boolean	Unitless	0	An indication that a building is divided into two or more distinct sets of rooms or other interior spaces that are internally fully-connected while being separated from each other and common areas by controlled access point(s) (for example: lockable doors) that enable physical privacy and security for its occupants. [Description] For example, an apartment building consisting of multiple self-contained residences individually including spaces for personal activities, cooking, eating, sleeping, and (usually) a private bathroom, or an office building housing multiple commercial establishments individually including spaces for reception, meetings, single or open-plan work areas, as well as individual or common-use bathrooms or cafeterias.

<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> <i>U</i>						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> <i>noInformation</i>						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> <i>noInformation</i>						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> <i>noInformation</i>						
Roof Shape	3	No Information	Enumeration	Unitless	0	The configuration(s) and/or appearance(s) of a roof.
<i>allowed values:</i> Conical No Information Pyramidal			Domed Other Sawtoothed			Flat Pitched Semi-cylindrical Flat with Clerestory Pitched with Clerestory With Clerestory

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	---

allowed values: noInformation

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

allowed values: pimGUID

Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
---------------------------------	---	---------------	----------------	----------	----	--

allowed values: noInformation

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature HardenedAircraftShelter (Point)

New ☐ Hardened Aircraft Shelter

A hardened structure built above or partially above ground that encloses aircraft to provide protection from enemy attack. [Description] The shelter is closed by blast resistant doors and is generally limited in size, only accommodating one or two relatively smaller (for example: fighter) aircraft. Those built to NATO specifications are designed to withstand a direct hit by a 226 kilogram bomb.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Aeronautical Obstacle Light Present	1	No Information	Boolean	Unitless	0	An indication that an obstacle that constitutes a danger to air navigation is marked by a light or lights.

	<u>allowed values:</u> <i>False</i>		No Information		<i>True</i>	
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
	<u>allowed values:</u> <i>-999999.0</i>					
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
	<u>allowed values:</u> <i>-999999.0</i>					
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
	<u>allowed values:</u> <i>noInformation</i>					
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<u>allowed values:</u> <i>[-999999, -999999]</i>					
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<u>allowed values:</u> Civilian Other		Joint Military and Civilian Private		Military Public	No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<u>allowed values:</u> <i>noInformation</i>					
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<u>allowed values:</u> No Information Partially Operational		Non-operational Planned		Not in Operation Temporarily Non-operational	Operational
New Feature Code	1	GB250	CONSTRAINED_STRING	Unitless	5	Feature Code
	<u>allowed values:</u> <i>GB250</i>					
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
	<u>allowed values:</u> Air Transport Defence Activities Warehousing and Storage		Aircraft Repair Emergency Operations		Armory No Information	Cargo Handling Other
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<u>allowed values:</u> <i>noInformation</i>					
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u> No Information		Other			
Hazard Shelter Intended Use	3	No Information	Enumeration	Unitless	0	The intended use(s) of a designated hazard protection shelter based on the kind of emergency. [Description] Hazard shelters may be located inside buildings or other structures. Shelters may be equipped with disaster supplies and equipment such as food and cots.
	<u>allowed values:</u> Bomb Shelter Storm Shelter		Fallout Shelter		No Information	Other
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.

allowed values: -999999.0

Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
-------------------	---	-----------	------	-------	---	---

allowed values: -999999.0

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0

Feature HazardousRock (Point)New ☐ Hazardous Rock

An isolated rocky formation or a single large stone or coral, usually one constituting a danger to navigation. [Description] May be either dry, awash, or below the water surface.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	Square Metre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Hydrographic Base Height : Sounding Metadata : Bathymetric Measurement Technique	3	No Information	Enumeration	Unitless	0	The technique used to determine water depth(s).
<i>allowed values:</i> Area Swept by Wire-drag			<i>Depth Known by Other Than Wire Drag</i>			<i>No Information</i> <i>Other</i>
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	BD130	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BD130						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

allowed values: No Information			Other

						Native Original Provisional Variant Transliterated
Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
allowed values: -999999.0						
Length	1	-999999.0	REAL	Metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
allowed values: U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
allowed values: No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
allowed values: noInformation						
Restriction Information : Security Attributes Group <resource non- intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
allowed values: noInformation						
Restriction Information : Security Attributes Group <resource owner- producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact						
Damaged No Information						
Destroyed Unmaintained						
Dismantled						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. <i>allowed values:</i> Brick No Information Steel			Concrete Other Stone			Masonry Prestressed Concrete Wood Metal Reinforced Concrete
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<u>allowed values:</u> noInformation							
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> No Information

<u>allowed values:</u> Conventional Native Transliterated Unverified Original							
Historical Original No Information Unverified Transliterated							
Historical Transliterated Other Variant Original							
Native Original Provisional Variant Transliterated							
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<u>allowed values:</u> -999999.0							
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999.0							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information							
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information							
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False							
No Information							
True							

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMNonIC
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMOwnerProducer
<i>allowed values:</i>	noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat)' (CSP:Okra) (FMM:Organic Techniques) could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i>	noInformation					
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Helipad (Area)

New ☐ Helipad

A designated area, usually with a prepared surface, used for the take-off, landing, or parking of helicopters. [Description] This prepared surface could either be located on land or on a platform over water. It may or may not be associated with an aerodrome. For example: a hospital helipad, and an offshore rig helipad.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aerodrome Pavement Information : Aerodrome Movement Area Surface Category	1	No Information	Enumeration	Unitless	0	The level of preparation of the aerodrome movement area surface, as a category. [Description] Common category types may range from natural to completely paved.
<i>allowed values:</i> Completely Paved Partially Paved			Mostly Paved Unpaved			No Information Unprepared Other
Aerodrome Pavement Information : Aerodrome Movement Area Surface Composition	3	No Information	Enumeration	Unitless	0	The type of the predominant material of which a surface of the movement area is composed. [Description] Example surfaces include: asphalt, concrete, or grass.
<i>allowed values:</i> Asphalt Clay Gravel Macadam Other Stone			Asphalt Over Concrete Concrete Ice Membrane Pierced Steel Planking Water			Bituminous Mix Coral Landing Mat No Information Sand Wood Brick Earthen Laterite Non-bituminous Mix Snow
Aerodrome Pavement Information : Aerodrome Movement Area Surface Preparation Method	3	No Information	Enumeration	Unitless	0	The preparation technique(s) applied to a surface composition.
<i>allowed values:</i> Aggregate Seal Coat No Information Rolled			Graded Oiled Rubberized Seal Coat			Grass Other Grooved Porous Friction Course
Aerodrome Pavement Information : Aerodrome Pavement Functional Status	1	No Information	Enumeration	Unitless	0	The functional status of the pavement of an aerodrome movement area. [Description] An aerodrome movement area is that part of an aerodrome to be used for aircraft movement operations, consisting of the manoeuvring area and the apron(s).
<i>allowed values:</i> Excellent Good Estimated Under Construction			Fair No Information Unserviceable			Fair Estimated Poor Good Poor Estimated
Aerodrome Surface Status	1	No Information	Enumeration	Unitless	0	The operational status of an aerodrome movement area, as a category. [Description] For example: serviceable, unserviceable, closed, or work-in-progress.
<i>allowed values:</i> Closed Work in Progress			No Information			Open Parked or Disabled Aircraft
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						

Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i>	No Information		Non-operational		Operational	
	Partially Operational		Planned		Temporarily Non-operational	
New Feature Code	1	GB030	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i>	GB030					
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i>	noInformation					
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i>	No Information					
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i>	No Information		Other			
Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i>	Conventional		Historical Original		Historical Transliterated	
	Native Transliterated		No Information		Other	
	Unverified Original		Unverified Transliterated		Variant Original	
					Native Original	
					Provisional	
					Variant Transliterated	
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i>	-999999.0					
Helipad Associated Facility	1	No Information	Enumeration	Unitless	0	The type of facility or building that is associated with a freestanding helipad.
<i>allowed values:</i>	Heliport		Hospital		Land Aerodrome	
	No Information		Non-hospital Building		Offshore Construction	
	Rig		Water Aerodrome		Military Installation	
					Other	
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i>	-999999.0					
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i>	-999999.0					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.

allowed values: No Information

Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.

Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISClassificationAll
---	---	---	----------	----------	----	--

allowed values: U

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
---	---	----------------	----------	----------	----	---

allowed values: No Information

Other

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem

allowed values: noInformation

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
---------------------------	---	---------------	----------------	----------	-------	---

allowed values: noInformation

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumlSMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Heliport (Area)New ☐ Heliport

An aerodrome intended to be used for the arrival, landing, takeoff or departure of vertical takeoff and landing aircraft/helicopters.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aerodrome Elevation	1	-999999.0	REAL	metre	0	The vertical distance above Mean Sea Level (MSL) of the highest point of the landing area. <i>allowed values:</i> -999999.0
Aerodrome Official Name	1	No Information	String	Unitless	80	The primary official name of an aerodrome as designated by an appropriate authority. <i>allowed values:</i> No Information
Airfield Symbol Type	1	No Information	Enumeration	Unitless	0	The type of airfield symbol designation. <i>allowed values:</i> Active Joint (Civilian/Military) Heliport H - Active Military Heliport J - Active Civil Heliport K - Active Military Heliport (with less than minimum facilities) L - Active Civil Heliport (with less than minimum facilities) No Information X - Decoy
Airfield Type	1	No Information	Enumeration	Unitless	0	The type of an airfield based on the size and/or paving of its runways. <i>allowed values:</i> Major Minor Other No Information Minor and Hard Minor and Soft
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature. <i>allowed values:</i> -999999.0
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack). <i>allowed values:</i> noInformation
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography. <i>allowed values:</i> [-999999, -999999]
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public). <i>allowed values:</i> Civilian Joint Military and Civilian Military Private No Information Public
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance. <i>allowed values:</i> noInformation
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures. <i>allowed values:</i> No Information Non-operational Not in Operation Operational Partially Operational Planned Temporarily Non-operational
New Feature Code	1	GB035	CONSTRAINED_STRING	Unitless	5	Feature Code

<u>allowed values:</u> GB035							
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<u>allowed values:</u> noInformation							
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/gencc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> No Information							
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<u>allowed values:</u> <div>Conventional Native Transliterated Unverified Original</div>				Other <div>Historical Original No Information Unverified Transliterated</div>			
				<div>Historical Transliterated Other Variant Original</div> <div>Native Original Provisional Variant Transliterated</div>			
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999.0							
	ICAO Location Indicator	1	noInformation	StructuredText	Unitless	14	The identifier that is assigned to a location in accordance with rules prescribed by the International Civil Aviation Organization (ICAO) in Document 7910. [Description] If available this indicator shall be used as primary for identification. [DatatypeSpecification] A structured text value specifying an ICAO location indicator. [EncodingSpecification] The 2 letter ICAO code of the State being responsible for the aerodrome in accordance with ICAO Doc7910, followed by either a two-digit integer between 01 and 99 or characters in the range A-Z.
<u>allowed values:</u> noInformation							
	Installation Operator	1	No Information	String	Unitless	2E+09	The name of the company or authority operating an installation.
<u>allowed values:</u> No Information							
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999.0							
	Magnetic Variation	1	-999999.0	Real	arcDegree	0	The angular difference between True North and Magnetic North measured at a given position and date. [Description] The value given indicates whether the angular difference is East (positive) or West (negative) of True North. True North is the direction of the northern point at which the geographic meridian lines meet.
<u>allowed values:</u> -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information							
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.

<i>allowed values:</i> No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Port of Entry	1	No Information	Boolean	Unitless	0	An indication that a facility is a port of entry for customs and immigration purposes.
<i>allowed values:</i> False			No Information			True
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. 	ICAO Location Indicator	1	noInformation	StructuredText	Unitless	14	The identifier that is assigned to a location in accordance with rules prescribed by the International Civil Aviation Organization (ICAO) in Document 7910. [Description] If available this indicator shall be used as primary for identification. [DatatypeSpecification] A structured text value specifying an ICAO location indicator. [EncodingSpecification] The 2 letter ICAO code of the State being responsible for the aerodrome in accordance with ICAO Doc7910, followed by either a two-digit integer between 01 and 99 or characters in the range A-Z.
	<i>allowed values:</i> <i>noInformation</i>						
	Installation Operator	1	No Information	String	Unitless	2E+09	The name of the company or authority operating an installation.

<i>allowed values:</i> No Information						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Magnetic Variation	1	-999999.0	Real	arcDegree	0	The angular difference between True North and Magnetic North measured at a given position and date. [Description] The value given indicates whether the angular difference is East (positive) or West (negative) of True North. True North is the direction of the northern point at which the geographic meridian lines meet.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact						
Damaged						
Destroyed						
Dismantled						
Port of Entry	1	No Information	Boolean	Unitless	0	An indication that a facility is a port of entry for customs and immigration purposes.
<i>allowed values:</i> False						
No Information						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information						
Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumlSMOwnerProducer

allowed values: noInformation

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

allowed values: noInformation

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Feature HoldingPen (Area)

New ☐ Holding Pen

An enclosed tract on which livestock are temporarily kept. [Description] For example, a sheepfold, a holding paddock, a livestock pen, a feedlot, and/or a stock yard. The enclosure may be by, for example, a fence or a wall.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.

<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned		Not in Operation Temporarily Non-operational Operational	
New Feature Code	1	AJ030	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AJ030						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated	
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						

Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information		True	
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information		Destroyed Unmaintained Dismantled	
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

allowed values: noInformation

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).

[Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation							
Geographic Name Information : Full Name		1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information							
Geographic Name Information : Geographic Name Type		1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original				Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Height Above Surface Level		1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0							
Highest Elevation		1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0							
Length		1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0							
Note : Memorandum		1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information							
Geographic Name Information : Name Identifier		1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information							

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation

Feature Hummock (Area)

New ☐ Hummock

A place of higher elevation within a wetland (for example: a swamp, a bog, or a marsh).

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.

allowed values: -999999.0

Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
--------------------------------	---	---------------	----------------	----------	----	---

allowed values: noInformation

New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
New	Feature Code	1	BH077	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> BH077						
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<i>allowed values:</i> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<i>allowed values:</i> No Information						
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMCClassificationAll
	<i>allowed values:</i> U						
	Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
	<i>allowed values:</i> No Information			Other			
	Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMDissem
	<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NGGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vegetation Trafficability Impact	1	-999999.0	Real	Percent	0	The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
<i>allowed values:</i> -999999.0						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.

Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AL099	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL099						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Agriculture Leprosy Care Other Residence			Emergency Operations Meeting Place Raising of Animals Vacation Cottage			Emergency Shelter No Information Refugee Shelter Weather Station Grazing Observation Station Religious Activities

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<u>allowed values:</u> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information			True

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i>	noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat)' (CSP:Okra) (FMM:Organic Techniques) could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i>	noInformation					
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

allowed values: noInformation*allowed values:* pimGUID

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature HydrocarbonProdFacility (Point)

New ☐ Hydrocarbon Products Facility

A facility involved in the production or distribution of petroleum, oil and/or natural gas products.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.

allowed values: No Information

allowed values: -999999.0

allowed values: -999999.0

	Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
	<i>allowed values:</i> noInformation						
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	<i>allowed values:</i> [-999999, -999999]						
	Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private		Military Public	No Information
New	External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	<i>allowed values:</i> noInformation						
	Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	<i>allowed values:</i> No Information Partially Operational			Non-operational Planned		Not in Operation Temporarily Non-operational	Operational
New	Feature Code	1	AC040	CONSTRAINED_STRING	Unitless	5	Feature Code
	<i>allowed values:</i> AC040						
	Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
	<i>allowed values:</i> Gas Oil Separation Pipeline Transport			No Information Terminal		Other Transfer Hub	Petroleum Refining
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						

Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact						
<i>allowed values:</i> Damaged No Information						
<i>allowed values:</i> Destroyed Unmaintained						
<i>allowed values:</i> Dismantled						
Manufacturing Information : Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i> Asphalt Gas Non-solid Hydrocarbon Fuel Petroleum						
<i>allowed values:</i> Biodiesel Liquefied Natural Gas (LNG) Other Petroleum and/or Natural Gas						
<i>allowed values:</i> Chemical Liquefied Petroleum Gas (LPG) Petrochemical Plastic						
<i>allowed values:</i> Fertilizer No Information Petrol						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information						
<i>allowed values:</i> Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

<i>allowed values:</i> AA052						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.

<u>allowed values:</u> <i>noInformation</i>						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> <i>No Information</i>						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

allowed values: *noInformation*

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.

allowed values: noInformation

Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original
						Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Predominant Feature Height	1	-999999.0	REAL	metre	0	The predominant height (the height of at least 50 percent) of the feature measured from the lowest point of the base at ground or water level (downhill side/downstream side).
<i>allowed values:</i> -999999.0						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumlSMClassificationAll
<i>allowed values:</i> U						

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMOwnerProducer
<i>allowed values:</i> noInformation						
Route Identification <route designation>	3	No Information	String	Unitless	24	The official type(s) and/or designation(s) assigned to a route. [Description] A road network may be identified in accordance with a specified typing scheme (for example: based the nature of service that it is intended to provide) and numbering scheme (for example: composed of a prefix indicating an administrative region and then a number).
<i>allowed values:</i> No Information						
Route Identification <route designation type>	3	No Information	Enumeration	Unitless	0	The type of designation of a road network according to the nature of service that it is intended to provide, as designated by international, national and/or other administrative authorities.
<i>allowed values:</i> International No Information			Local Other			National Secondary National Motorway
New Sinuosity	1	-999999.0	Real	Metres	0	The actual path length divided by the shortest path length of a section of the road or trail allowing for estimates of speed given the curves of the roadway. [Description] This allows for routing algorithms to more precisely estimate the speed.
<i>allowed values:</i> -999999.0						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Speed Limit (KPH)	1	-999999.0	Real	Kilometre per Hour	0	The maximum vehicle speed legally permitted, expressed in kilometres per hour.
<i>allowed values:</i> -999999.0						
Speed Limit (MPH)	1	-999999.0	Real	Statute Mile per Hour	0	The maximum vehicle speed legally permitted, expressed in miles per hour.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature IceShelf (Area)New ☐ Ice Shelf

A floating ice sheet of considerable thickness that is normally attached to the land along its landward edge. [Description] Ice shelves are the seaward extension of land glaciers. Limited areas of the ice shelf may be aground where the glacier first enters the water and possibly in other places offshore. Ice shelves are usually of great horizontal extent and have a level or gently undulating surface. The seaward edge of an ice shelf is termed an 'ice cliff'.

	Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
	Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
	<i>allowed values:</i> -999999.0						
	Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
	<i>allowed values:</i> noInformation						
New	Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.

Feature IndustrialFarm (Area)

New ☐ Industrial Farm

An estate or large farm operating on the plantation economy model in which the farm operates as a single economic unit whose operations are based on agricultural mass production of a few staple crops (for example: cotton, tobacco, sugar cane, bananas, and/or rubber) that are typically not indigenous to the region. [Description] Plantation economies are often dependent on distant (for example: export) markets as the crops are harvested in large quantities. Historically, industrial farms were often found in former European colonies and termed 'plantations'.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.

<i>allowed values:</i>	Emergency Operations No Information		Growing of Crops Other		Meeting Place	Mixed Farming
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i>	noInformation					
Foliage Type	1	No Information	Enumeration	Unitless	0	The predominant foliage type of the vegetation.
<i>allowed values:</i>	Deciduous Other		Evergreen		Mixed	No Information

	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (":"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<u>allowed values:</u> No Information			Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information			True
New	Crop Information : Permanent Irrigation	1	No Information	Boolean	Unitless	0	An indication that a field is continuously used for cultivation and permanent irrigation is required due to the natural aridity of the area.
	<u>allowed values:</u> False			No Information			True
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.

<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained	Dismantled
Predominant Vegetation Height	1	-999999.0	REAL	Metre	0	The predominant height (the height of at least 50 percent) of the vegetation.	
<i>allowed values:</i> -999999.0							
Manufacturing Information : Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.	
<i>allowed values:</i>	Coffee Fish Milk Olive Oil Salt Vegetation Product		Consumer Goods Food Milled Grain Other Sugar Wine			Cotton Fruit No Information Rice Textile	Desalinated Water Lumber No Product Rubber Tobacco
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll	
<i>allowed values:</i> U							
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode	
<i>allowed values:</i> No Information			Other				
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMDissem	
<i>allowed values:</i> noInformation							
Restriction Information : Security Attributes Group <resource non- intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMNonIntC	
<i>allowed values:</i> noInformation							
Restriction Information : Security Attributes Group <resource owner- producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMOwnerProducer	
<i>allowed values:</i> noInformation							
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.	

allowed values: noInformation

Stem Diameter	1	[-999999.0, -999999.0]	REAL_INTERVAL	metre	0	The average diameter of the tree trunks in an area, measured at a height of approximately 1.5 metres or 4.5 feet on the high side (if on a hillside) above the surface of the ground. [Description] Commonly referred to as the 'diameter at breast height' (dbh). For trees up to 2 metres high, the stem diameter is measured at the mid-point between the ground and the stem tip.
<i>allowed values:</i> [-999999.0, -999999.0]						
Tree Spacing	1	[-999999.0, -999999.0]	REAL_INTERVAL	metre	0	The average tree spacing between trees in a stand, determined from centre to centre of adjacent trees.
<i>allowed values:</i> [-999999.0, -999999.0]						
Undergrowth Density	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The fraction of land within a defined area that is covered by undergrowth (for example: scrub, brush, and/or bush).
<i>allowed values:</i> [-999999.0, -999999.0]						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vegetation Species	3	No Information	Enumeration	Unitless	0	The predominant species of a tract of vegetation.
<i>allowed values:</i> Bamboo Cypress Nipa No Information Other Palm						
Vegetation Trafficability Impact	1	-999999.0	Real	Percent	0	The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
<i>allowed values:</i> -999999.0						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature IndustrialFarm (Point)

New ☐ Industrial Farm

An estate or large farm operating on the plantation economy model in which the farm operates as a single economic unit whose operations are based on agricultural mass production of a few staple crops (for example: cotton, tobacco, sugar cane, bananas, and/or rubber) that are typically not indigenous to the region. [Description] Plantation economies are often dependent on distant (for example: export) markets as the crops are harvested in large quantities. Historically, industrial farms were often found in former European colonies and termed 'plantations'.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Canopy Cover	1	-999999.0	REAL	percent	0	The fraction of canopy cover within a defined area during the season of maximum foliage. [Description] The canopy is formed by the upper branches of the trees in a forest forming a more or less continuous layer.
<i>allowed values:</i> -999999.0						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Crop Information : Crop Species	3	No Information	Enumeration	Unitless	0	The predominant species of a crop land.
<i>allowed values:</i> Bamboo Coffee Oil Crop Sugar Cane Tobacco			Banana Cork-Oak Oil Palm Sugar Crop			Cacao Cotton Other Tea Coconut No Information Rubber Timber
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
Crop Information : Farming Method	3	No Information	Enumeration	Unitless	0	The agricultural practice(s) in use within an agro-ecosystem.
<i>allowed values:</i> Fallow Permanent			Grazing Slash and Burn			No Information Other
Crop Information : Farming Pattern	3	No Information	Enumeration	Unitless	0	The general arrangement(s) and/or pattern(s) of farming fields.

<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Stem Diameter	1	[-999999.0, -999999.0]	REAL_INTERVAL	metre	0	The average diameter of the tree trunks in an area, measured at a height of approximately 1.5 metres or 4.5 feet on the high side (if on a hillside) above the surface of the ground. [Description] Commonly referred to as the 'diameter at breast height' (dbh). For trees up to 2 metres high, the stem diameter is measured at the mid-point between the ground and the stem tip.
<i>allowed values:</i> [-999999.0, -999999.0]						
Tree Spacing	1	[-999999.0, -999999.0]	REAL_INTERVAL	metre	0	The average tree spacing between trees in a stand, determined from centre to centre of adjacent trees.
<i>allowed values:</i> [-999999.0, -999999.0]						
Undergrowth Density	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The fraction of land within a defined area that is covered by undergrowth (for example: scrub, brush, and/or bush).
<i>allowed values:</i> [-999999.0, -999999.0]						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vegetation Species	3	No Information	Enumeration	Unitless	0	The predominant species of a tract of vegetation.
<i>allowed values:</i> Bamboo Other			Cypress Palm			Nipa No Information
Vegetation Trafficability Impact	1	-999999.0	Real	Percent	0	The degree of impact of vegetation on trafficability, based on the percent trafficability reduction from a smooth, vegetation-free terrain surface (zero percent reduction). [Description] Vegetation reduces trafficability by requiring that either it must be 'overridden' (for example: scrub by a battle tank) or bypassed (for example: orchard trees by an infantryman).
<i>allowed values:</i> -999999.0						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0

Feature IndustrialFurnace (Area)New ☐ Industrial Furnace

A structure used in material processing that employs heating to harden (for example: to fire brick or ceramic), pyrolyse (for example: convert coal to coke, or limestone to lime), burn (for example: to incinerate waste), or dry (for example: lumber). [Description] May assume many forms, for example a domed 'beehive' kiln or a long linear coke oven battery.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AC060	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AC060						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						

New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2

	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
	<u>allowed values:</u> False			No Information			True
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<u>allowed values:</u> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
	Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
	<u>allowed values:</u> Brick Lumber			Cement No Information			Charcoal Other Lime Pottery

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<u>allowed values:</u> -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information							
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information							
	Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<u>allowed values:</u> False							
No Information							
True							

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained Dismantled
Product	3	No Information	Enumeration	Unitless	0	The principal product(s) resulting from a production, mining, or agricultural activity. [Description] If multiple products are specified then they are usually listed in descending order of importance.
<i>allowed values:</i>	Brick Lumber		Cement No Information			Charcoal Other Lime Pottery
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMCClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMNonIC
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMOwnerProducer
<i>allowed values:</i>	noInformation					
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i>	noInformation					

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

allowed values: noInformation

allowed values: pimGUID

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature InlandWaterbody (Area)

New ☐ Inland Waterbody

A body of water that is entirely surrounded by land. [Description] It may occur in a natural terrain depression in which water collects, or may be impounded by a dam, or formed by its bed being hollowed out of the soil, or formed by embanking and/or damming up a natural hollow (for example: by a beaver dam). Inland waterbodies have many uses such as: a source of water for irrigation, industrial processes, human consumption, and recreation. Impounded inland waterbodies may also be used for flood control.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Inland Waterbody Bank : Above Water Bank Slope (first bank)	1	-999999.0	REAL	percent	0	The amount of upward inclination between the horizontal surface of the mean water level of a watercourse where it touches the bank and the top of the first usable break in slope, measured at the same point on the upper bank as the military gap width. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
<i>allowed values:</i> -999999.0 <i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Average Water Depth	1	[-999999.0, -999999.0]	Real_Interval	Metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999.0, -999999.0]						
Inland Waterbody Bank : Bank Orientation (first bank)	1	No Information	Enumeration	Unitless	0	The relative orientation of a bank of an inland waterbody based on the direction of predominant water flow in the adjacent waterbody.
<i>allowed values:</i> Indeterminate Other			Left Right			No Flow No Information

<i>allowed values:</i> Indeterminate Other		Left Right		No Flow		No Information
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> No Information			Other			Private Public
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN ⁻ . These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						
Dammed	1	No Information	Boolean	Unitless	0	An indication that a body of water is impounded by a dam.
<i>allowed values:</i> False			No Information			True
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BH082	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BH082						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Aquaculture No Information Water Collection			Commerce Other Water Transport			Fishing Power Generation Yacht-club Navigation Recreation
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						

Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
allowed values: No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (";"), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
allowed values: No Information			Other			
Geographic Name Information : Geographic Name Type	3	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
allowed values: Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original Native Original Provisional Variant Transliterated
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
allowed values: -999999.0						
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
allowed values: Dry			Intermittent			No Information Perennial
Inland Water Type	1	No Information	Enumeration	Unitless	0	The type of an inland water based on its principal characteristics.
allowed values: Basin Other Water-hole			Lake Pond			Landlocked Sea Reservoir No Information Undifferentiated Water Body
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values: -999999.0						
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
allowed values: -999999.0						
Man-made	1	No Information	Boolean	Unitless	0	An indication that a feature is man-made.
allowed values: False			No Information			True
Man-made Shoreline	1	No Information	Boolean	Unitless	0	An indication that a body of water is completely surrounded by a man-made shoreline.
allowed values: False			No Information			True
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values: No Information						
Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values: No Information						

Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> <i>False</i>			No Information			<i>True</i>
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> <i>-999999.0</i>						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> <i>-999999.0</i>						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained Dismantled
Predominant Maximum Water Depth	1	-999999.0	REAL	Metre	0	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> <i>-999999.0</i>						
Predominant Minimum Water Depth	1	-999999.0	REAL	Metre	0	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> <i>-999999.0</i>						
Predominant Water Depth	1	[-999999.0, -999999.0]	Real_Interval	Metre	0	The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> <i>[-999999.0, -999999.0]</i>						
Inland Waterbody Bank : Predominant Waterbody Bank Height	1	[-999999.0, -999999.0]	REAL_INTERVAL	metre	0	The predominant height (the height of at least 50 percent) of the bank, measured from mean water level to the first break in slope above the mean water level.
<i>allowed values:</i> <i>[-999999.0, -999999.0]</i>						
<i>allowed values:</i> <i>[-999999.0, -999999.0]</i>						
Inland Waterbody Bank : Predominant Waterbody Bank Slope	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The predominant slope (the slope of at least 50 percent) of the bank, measured from mean water level to the first accessible break in slope above the mean water level. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
<i>allowed values:</i> <i>[-999999.0, -999999.0]</i>						
<i>allowed values:</i> <i>[-999999.0, -999999.0]</i>						
New Water Resource Information : Reservoir Type	1	No Information	Enumeration	Unitless	0	Indicates the method of containing the water in a reservoir.
<i>allowed values:</i> <i>Back-up Water Impounded by a Dam</i>			Constructed Basin			No Information Other
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/icsm/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> <i>U</i>						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). <i>allowed values:</i> Building Rubble Marshy Sandy			Erosion Rubble Mud Shingly			Ice No Information Stony
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Tide Influenced	1	No Information	Boolean	Unitless	0	An indication that a waterbody is affected by the tide.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID						
Volume	1	-999999.0	REAL	cubicMetre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable			No Information Treatable			Nonpotable Other
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Seawater			Brackish No Information			Brine Not Applicable Fresh Saline
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic			Commercial Livestock Other			Domestic Irrigation Military Power Generation Industrial Municipal Recreational
Inland Waterbody Bank : Waterbody Bank Height (first bank)	1	-999999.0	REAL	metre	0	The height of the waterbody bank above the average water level.
<i>allowed values:</i> -999999.0 <i>allowed values:</i> -999999.0						
Inland Waterbody Bank : Waterbody Bank Vegetation Cover (first bank)	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The fraction of vegetation cover on the bank of a watercourse.
<i>allowed values:</i> [-999999.0, -999999.0] <i>allowed values:</i> [-999999.0, -999999.0]			-999999.0			
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0

Feature InlandWaterbody (Point)New ☐ Inland Waterbody

A body of water that is entirely surrounded by land. [Description] It may occur in a natural terrain depression in which water collects, or may be impounded by a dam, or formed by its bed being hollowed out of the soil, or formed by embanking and/or damming up a natural hollow (for example: by a beaver dam). Inland waterbodies have many uses such as: a source of water for irrigation, industrial processes, human consumption, and recreation. Impounded inland waterbodies may also be used for flood control.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Inland Waterbody Bank : Above Water Bank Slope (first bank)	1	-999999.0	REAL	percent	0	The amount of upward inclination between the horizontal surface of the mean water level of a watercourse where it touches the bank and the top of the first usable break in slope, measured at the same point on the upper bank as the military gap width. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
<i>allowed values:</i> -999999.0						
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Average Water Depth	1	[-999999.0, -999999.0]	Real_Interval	Metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999.0, -999999.0]						
Inland Waterbody Bank : Bank Orientation (first bank)	1	No Information	Enumeration	Unitless	0	The relative orientation of a bank of an inland waterbody based on the direction of predominant water flow in the adjacent waterbody.
<i>allowed values:</i> Indeterminate			Left			No Flow
<i>allowed values:</i> Other			Right			No Information
<i>allowed values:</i> Indeterminate			Left			No Flow
<i>allowed values:</i> Other			Right			No Information
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						

Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> No Information			Other			Private Public
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						
Dammed	1	No Information	Boolean	Unitless	0	An indication that a body of water is impounded by a dam.
<i>allowed values:</i> False			No Information			True
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	BH082	CONSTRAINED_ STRING	Unitless	5	Feature Code
<i>allowed values:</i> BH082						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<i>allowed values:</i> Aquaculture No Information Water Collection			Commerce Other Water Transport			Fishing Power Generation Navigation Recreation Yacht-club
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Geographic Name Information : Geographic Name Type	3	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.

<i>allowed values:</i>	Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.	
<i>allowed values:</i> -999999.0							
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.	
<i>allowed values:</i> Dry			Intermittent			No Information	Perennial
Inland Water Type	1	No Information	Enumeration	Unitless	0	The type of an inland water based on its principal characteristics.	
<i>allowed values:</i> Basin Other Water-hole			Lake Pond			Landlocked Sea Reservoir	No Information Undifferentiated Water Body
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
<i>allowed values:</i> -999999.0							
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.	
<i>allowed values:</i> -999999.0							
Man-made	1	No Information	Boolean	Unitless	0	An indication that a feature is man-made.	
<i>allowed values:</i> False			No Information			True	
Man-made Shoreline	1	No Information	Boolean	Unitless	0	An indication that a body of water is completely surrounded by a man-made shoreline.	
<i>allowed values:</i> False			No Information			True	
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
<i>allowed values:</i> No Information							
Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
<i>allowed values:</i> No Information							
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.	
<i>allowed values:</i> False			No Information			True	
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).	
<i>allowed values:</i> -999999.0							
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.	
<i>allowed values:</i> -999999.0							

Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i>	Construction Intact		Damaged No Information			Destroyed Unmaintained Dismantled
Predominant Maximum Water Depth	1	-999999.0	REAL	Metre	0	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i>	-999999.0					
Predominant Minimum Water Depth	1	-999999.0	REAL	Metre	0	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i>	-999999.0					
Predominant Water Depth	1	[-999999.0, -999999.0]	Real_Interval	Metre	0	The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i>	[-999999.0, -999999.0]					
Inland Waterbody Bank : Predominant Waterbody Bank Height	1	[-999999.0, -999999.0]	REAL_INTERVAL	metre	0	The predominant height (the height of at least 50 percent) of the bank, measured from mean water level to the first break in slope above the mean water level.
<i>allowed values:</i>	[-999999.0, -999999.0]					
<i>allowed values:</i>	[-999999.0, -999999.0]					
Inland Waterbody Bank : Predominant Waterbody Bank Slope	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The predominant slope (the slope of at least 50 percent) of the bank, measured from mean water level to the first accessible break in slope above the mean water level. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: ((h2-h1)/d)*100.
<i>allowed values:</i>	[-999999.0, -999999.0]					
<i>allowed values:</i>	[-999999.0, -999999.0]					
New Water Resource Information : Reservoir Type	1	No Information	Enumeration	Unitless	0	Indicates the method of containing the water in a reservoir.
<i>allowed values:</i>	Back-up Water Impounded by a Dam		Constructed Basin			No Information Other
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i>	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i>	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i>	noInformation					
Restriction Information : Security Attributes Group <resource non- intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i>	noInformation					

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Inland Waterbody Bank : Shoreline Delineated (first bank)	1	No Information	Boolean	Unitless	0	An indication that the delineation of a shoreline is definite. [Description] The delineation of the shoreline along a beach is typically definite whereas along a mangrove swamp it is typically indefinite.
<i>allowed values:</i> False			No Information			True
<i>allowed values:</i> False			No Information			True
Inland Waterbody Bank : Shoreline Type (first bank)	1	No Information	Enumeration	Unitless	0	The physical characteristics of a shoreline.
<i>allowed values:</i> Building Rubble Marshy Sandy			Erosion Rubble Mud Shingly			Ice No Information Stony
<i>allowed values:</i> Building Rubble Marshy Sandy			Erosion Rubble Mud Shingly			Ice No Information Stony
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Tide Influenced	1	No Information	Boolean	Unitless	0	An indication that a waterbody is affected by the tide.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Volume	1	-999999.0	REAL	cubicMetre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<i>allowed values:</i> -999999.0						

Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Potability	1	No Information	Enumeration	Unitless	0	The potability of water based on the type of treatment required before it is safe for human consumption.
<i>allowed values:</i> Contaminated Potable			No Information Treatable			Nonpotable Other
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Seawater			Brackish No Information			Brine Not Applicable Fresh Saline
Water Resource Information : Water Use	4	No Information	Enumeration	Unitless	0	The use(s) for which water is withdrawn or consumed from a source. [Description] Uses include, for example: domestic purposes, industrial processing, and irrigation.
<i>allowed values:</i> Agricultural Irrigation Institutional No Information Sanitary Domestic			Commercial Livestock Other			Domestic Irrigation Military Power Generation Industrial Municipal Recreational
Inland Waterbody Bank : Waterbody Bank Height (first bank)	1	-999999.0	REAL	metre	0	The height of the waterbody bank above the average water level.
<i>allowed values:</i> -999999.0						
<i>allowed values:</i> -999999.0						
Inland Waterbody Bank : Waterbody Bank Vegetation Cover (first bank)	1	[-999999.0, -999999.0]	REAL_INTERVAL	percent	0	The fraction of vegetation cover on the bank of a watercourse.
<i>allowed values:</i> [-999999.0, -999999.0]						
<i>allowed values:</i> [-999999.0, -999999.0]			-999999.0			
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature InlandWaterbodyAON (Area)

New ☒ Inland Waterbody Area of Numerous

Area of numerous bodies of water that are entirely surrounded by land.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Inland Waterbody Bank : Above Water Bank Slope (first bank)	1	-999999.0	REAL	percent	0	The amount of upward inclination between the horizontal surface of the mean water level of a watercourse where it touches the bank and the top of the first usable break in slope, measured at the same point on the upper bank as the military gap width. [Description] The (percent) slope is determined as the change in depth divided by the horizontal distance over which the change takes place, multiplied by one hundred: $((h2-h1)/d)*100$.
<i>allowed values:</i> -999999.0						
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Average Water Depth	1	[-999999.0, -999999.0]	Real_Interval	Metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999.0, -999999.0]						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						
Dammed	1	No Information	Boolean	Unitless	0	An indication that a body of water is impounded by a dam.
<i>allowed values:</i> False			No Information			True
Deepest Depth Below Surface Level	1	-999999.0	Real	Metre	0	The distance measured from ground or water level (uphill/upstream side of the feature) to the deepest point of the feature. [Description] May be used to measure the depth of an inland waterbody (for example: a lake), the depth of a terrain surface depression or excavation (for example: a crevice or trench), the distance to the deepest point of a drilled feature (for example: a water well or borehole) or the distance to the deepest point of a feature located entirely underground (for example: a cave chamber). In the case of a feature located below a waterbody (for example: a non-water well) the reference surface is the waterbody bottom, rather than the waterbody surface.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.

<u>allowed values:</u> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<u>allowed values:</u> No Information Non-operational Not in Operation Operational Partially Operational Planned Temporarily Non-operational						
New Feature Code	1	NM082	CONSTRAINED_STRING	Unitless	5	Feature Code
<u>allowed values:</u> NM082						
Feature Count	1	-999999	Integer	Unitless	0	The number of features of the same type within a defined region. [Description] May be used to indicate the number of features actually present in near proximity to each other although only one representative feature is collected. For example, the number of adjacent pipelines.
<u>allowed values:</u> -999999						
Feature Function	3	No Information	Enumeration	Unitless	0	The purpose(s) of, or intended role(s) served by, the feature.
<u>allowed values:</u> Aquaculture Commerce Fishing Navigation No Information Other Power Generation Recreation Water Collection Water Transport Yacht-club						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<u>allowed values:</u> noInformation						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> No Information Other						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<u>allowed values:</u> -999999.0						
Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<u>allowed values:</u> Dry Intermittent No Information Perennial						
Inland Water Type	1	No Information	Enumeration	Unitless	0	The type of an inland water based on its principal characteristics.
<u>allowed values:</u> Basin Lake Landlocked Sea No Information Other Pond Reservoir Undifferentiated Water Body Water-hole						
Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<u>allowed values:</u> -999999.0						
Man-made	1	No Information	Boolean	Unitless	0	An indication that a feature is man-made.
<u>allowed values:</u> False No Information True						
Man-made Shoreline	1	No Information	Boolean	Unitless	0	An indication that a body of water is completely surrounded by a man-made shoreline.
<u>allowed values:</u> False No Information True						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.

<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False No Information True						
Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<i>allowed values:</i> -999999.0						
Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<i>allowed values:</i> -999999.0						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact Damaged No Information Destroyed Unmaintained Dismantled						
Predominant Maximum Water Depth	1	-999999.0	REAL	Metre	0	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> -999999.0						
Predominant Minimum Water Depth	1	-999999.0	REAL	Metre	0	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> -999999.0						
Predominant Water Depth	1	[-999999.0, -999999.0]	Real_Interval	Metre	0	The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999.0, -999999.0]						
Inland Waterbody Bank : Predominant Waterbody Bank Height	1	[-999999.0, -999999.0]	REAL_INTERVAL	metre	0	The predominant height (the height of at least 50 percent) of the bank, measured from mean water level to the first break in slope above the mean water level.
<i>allowed values:</i> [-999999.0, -999999.0]						
<i>allowed values:</i> [-999999.0, -999999.0]						
New Water Resource Information : Reservoir Type	1	No Information	Enumeration	Unitless	0	Indicates the method of containing the water in a reservoir.
<i>allowed values:</i> Back-up Water Impounded by a Dam Constructed Basin No Information Other						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Inland Waterbody Bank : Shoreline Delineated (first bank)	1	No Information	Boolean	Unitless	0	An indication that the delineation of a shoreline is definite. [Description] The delineation of the shoreline along a beach is typically definite whereas along a mangrove swamp it is typically indefinite.
<i>allowed values:</i> False			No Information			True
<i>allowed values:</i> False			No Information			True
Inland Waterbody Bank : Shoreline Type (first bank)	1	No Information	Enumeration	Unitless	0	The physical characteristics of a shoreline.
<i>allowed values:</i> Building Rubble Marshy Sandy			Erosion Rubble Mud Shingly			Ice No Information Stony
<i>allowed values:</i> Building Rubble Marshy Sandy			Erosion Rubble Mud Shingly			Ice No Information Stony
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						
Tide Influenced	1	No Information	Boolean	Unitless	0	An indication that a waterbody is affected by the tide.
<i>allowed values:</i> False			No Information			True
Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						

Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation <i>allowed values:</i> pimGUID						
Volume	1	-999999.0	REAL	cubicMetre	0	The volume of a feature. [Description] For example, the storage capacity of a water tower.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0

Feature Installation (Area)

New ☐ Installation

A grouping of facilities, located in the same vicinity, which support particular functions.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Angle of Orientation	1	-999999.0	REAL	arcDegree	0	The angular distance in the horizontal plane measured from true north (0 degrees) clockwise to the major axis of the feature. [Description] If the feature is square, the axis 0 up to 90 degrees is recorded. If the feature is circular, 360 degrees is recorded.
<i>allowed values:</i> -999999.0						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
<i>allowed values:</i> Civilian Other			Joint Military and Civilian Private			Military Public No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AL011	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL011						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			

Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
allowed values:	Conventional Native Transliterated Unverified Original		Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
allowed values:	-999999.0					
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
allowed values:	No Information					
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
allowed values:	No Information					
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
allowed values:	False		No Information		True	
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
allowed values:	Construction Intact		Damaged No Information		Destroyed Unmaintained	Dismantled
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumlSMClassificationAll
allowed values:	U					
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEoint Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
allowed values:	No Information		Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumlSMDissem
allowed values:	noInformation					
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumlSMNonIC
allowed values:	noInformation					

Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumlSMOwnerProducer
<u>allowed values:</u> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<u>allowed values:</u> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

New	Feature Code	1	SU030	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> SU030							
New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation							
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information				Other			
	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original				Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	
						Native Original Provisional Variant Transliterated	
	Length	1	-999999.0	Real	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information							
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information							
	Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVenumISMClassificationAll
<i>allowed values:</i> U							

Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Vertical Obstruction Identifier	1	noInformation	StructuredText	Unitless	14	A unique identification code that identifies a feature that is a vertical obstruction to low-level flight.
<i>allowed values:</i> noInformation

Feature InsubstantialNavMark (Point)New ☐ Insubstantial Navigation Mark

A small, insubstantial navigational mark. [Description] For example, a staff placed on top of a rock or shoal to mark a hazard or serve as a navigational aid.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Hydrographic Base Height : Sounding Metadata : Bathymetric Measurement Quality Category	3	No Information	Enumeration	Unitless	0	A general evaluation of the qualities of a bathymetric measurement, as a category. [Description] Drying heights are typically captured using negative (bathymetric) sounding values; their certainty of measurement may be categorized in the same manner as positive values.
<i>allowed values:</i> Depth Doubtful Least Depth Not Applicable Unconfirmed Depth						
			Depth Known Maintained Depth Other Unmaintained Depth			
					Depth Unknown No Bottom Reported Depth	Depth Unreliable No Information Safe Clearance Known
Hydrographic Base Height : Sounding Metadata : Bathymetric Measurement Technique	3	No Information	Enumeration	Unitless	0	The technique used to determine water depth(s).
<i>allowed values:</i> Area Swept by Side-scan Sonar Computer Generated Lead-line Other Singlebeam						
			Area Swept by Vertical Acoustic System Diver Levelling Photogrammetry Underwater Utility Vehicle			
					Area Swept by Wire-drag Echo Sounder Multi-beam Echo Sounder Satellite Imagery	Bathymetric LiDAR Electromagnetic Sensor No Information Side-scan Sonar
Beacon Type	1	No Information	Enumeration	Unitless	0	The type of a beacon based on its significance to maritime navigation.
<i>allowed values:</i> Cable Mark Ferry Crossing Mark Measured Distance Outfall Mark Reduced Wake Speed Limit Mark Target Mark						
			Cairn Insubstantial Navigation Mark No Information Overhead Power Cable Mark Restricted Horizontal Clearance Mark Starboard-hand Edge Telephone Mark			
					Channel Edge Gradient Leading Line Not Applicable Pile Beacon Restricted Vertical Clearance Mark Stop Mark Withy	Degaussing Range Mark Maximum Vessel's Draught Mark Other Port-hand Edge Sound Ship's Siren Strong Current Warning Mark
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	BC080	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BC080						

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<u>allowed values:</u> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<u>allowed values:</u> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. 	Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
	<u>allowed values:</u> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated		Historical Transliterated Other Variant Original	Native Original Provisional Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	Metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<u>allowed values:</u> -999999.0						
	Highest Elevation	1	-999999.0	REAL	Metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<u>allowed values:</u> -999999.0						
	Hydrographic Base Height	1	-999999.0	REAL	Metre	0	The height from a specified sounding datum to the bottom or base of a feature (for example: the base of a lighthouse).
	<u>allowed values:</u> -999999.0						
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
	<u>allowed values:</u> No Information						
	Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
	<u>allowed values:</u> No Information						
	Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
	<u>allowed values:</u> Construction Intact			Damaged No Information		Destroyed Unmaintained	Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. <i>allowed values:</i> noInformation						
Hydrographic Base Height : Sounding Metadata : Sounding Datum	1	No Information	Enumeration	Unitless	0	The tidal datum to which soundings and drying heights are referenced. [Description] It is usually taken to correspond to a low water stage of the tide.
<i>allowed values:</i>						
Approximate Lowest Astronomical Tide			Approximate Mean Low Water			Approximate Mean Low Water Springs
Approximate Mean Sea Level			Chart Datum (Unspecified)			Equinoctial Spring Low Water
High Water Springs			Higher High Water			Higher High Water Large Tide
Highest High Water			Indian Spring High Water			Indian Spring Low Water
Local Datum			Low Water			Low Water Springs
Lower Low Water Large Tide			Lowest Astronomical Tide			Lowest Low Water
Mean High Water			Mean High Water Neaps			Mean High Water Springs
Mean Higher High Water Springs			Mean Low Water			Mean Low Water Neaps
Mean Lower Low Water			Mean Lower Low Water Springs			Mean Sea Level
Mean Water Level			Neap Tide			Nearly Highest High Water
No Information			Other			Spring Tide
Hydrographic Base Height : Sounding Metadata : Sounding Datum Name	1	No Information	String	Unitless	80	The name of the tidal datum to which soundings and drying heights are referenced. [Description] Used when the sounding datum is known but not specified using Attribute: 'Sounding Datum'.
<i>allowed values:</i> No Information						
Hydrographic Base Height : Sounding Metadata : Sounding Velocity Correction Method	1	No Information	Enumeration	Unitless	0	The method of correction that has been used to correct a sounding velocity instrument reading to obtain the correct depth.
<i>allowed values:</i>						
Mathews Tables			No Information			Not Applicable
Sound Velocity Meter			Sounder 1500 Calibrated			Other
						Sounder Other Calibrated

Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.

This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	<i>allowed values:</i> noInformation						
	Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	<i>allowed values:</i> No Information						
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	<i>allowed values:</i> No Information		Other

	Native Transliterated		No Information		Other		Provisional
	Unverified Original		Unverified Transliterated		Variant Original		Variant Transliterated
	Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
	<i>allowed values:</i> -999999.0						
	Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
	<i>allowed values:</i> -999999.0						
	Historic Significance	1	No Information	Enumeration	Unitless	0	The recognized historic significance of a site and/or facility, if any.

allowed values:	Ancient National Political		Battlefield No Information Religious		Historic Not Significant		Military Other
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.	
allowed values:	-999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.	
allowed values:	No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.	
allowed values:	No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.	
allowed values:	False		No Information		True		
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.	
allowed values:	Construction Intact		Damaged No Information			Destroyed Unmaintained	Dismantled

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMClassificationAll	
allowed values:	U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode	
allowed values:	No Information		Other				

Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature InterestSite (Point)

New ☐ Interest Site

A site maintained for the public and declared to be of national or provincial historical significance and/or interest.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Address	1	No Information	String	Unitless	2E+09	The postal address and/or electronic contact information for a facility, organisation or person.
<i>allowed values:</i> No Information						
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
<i>allowed values:</i> -999999.0						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
<i>allowed values:</i> No Information Partially Operational			Non-operational Planned			Not in Operation Temporarily Non-operational Operational
New Feature Code	1	AL201	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> AL201						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<i>allowed values:</i> No Information						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	FA110	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> FA110						
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<i>allowed values:</i> noInformation						
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (':'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<i>allowed values:</i> No Information			Other			
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).

Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original
						Native Original Provisional Variant Transliterated
Height Above Surface Level	1	-999999.0	REAL	metre	0	The vertical distance measured from the lowest point of the base of the feature at ground or water level (downhill/downstream side) to the tallest point of the feature. [Description] For non-inland water bodies, the water level is usually understood to be Mean Sea Level (MSL). Note that the feature may be supported above the surface by another feature (for example: a tower supported by a building) and as a consequence the value of the Height Above Surface Level is different (larger) than the base-to-top height of the feature (for example: supported tower) itself.
<i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. <i>allowed values:</i> -999999.0						
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Navigation Landmark	1	No Information	Boolean	Unitless	0	An indication that a feature may serve as a navigation landmark, allowing for rapid and positive orientation of a navigator. [Description] Its size, shape, location, and/or isolation make it prominent in relation to its surroundings, and it is therefore easily recognized from the surface and/or from the air.
<i>allowed values:</i> False			No Information			True
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						

Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Shoreline Delineated	1	No Information	Boolean	Unitless	0	An indication that the delineation of a shoreline is definite. [Description] The delineation of the shoreline along a beach is typically definite whereas along a mangrove swamp it is typically indefinite.
<i>allowed values:</i> False			No Information			True
Shoreline Type	1	No Information	Enumeration	Unitless	0	The physical characteristics of a shoreline.
<i>allowed values:</i> Building Rubble Mangrove Other			Coral Marshy Sandy			Erosion Rubble Mud Shingly Ice No Information Stony
Water Line : Sounding Datum	1	No Information	Enumeration	Unitless	0	The tidal datum to which soundings and drying heights are referenced. [Description] It is usually taken to correspond to a low water stage of the tide.
<i>allowed values:</i> Highest High Water Lowest Low Water Mean Higher High Water Springs Mean Lower Low Water Springs			Indian Spring High Water Mean High Water Mean Low Water Mean Sea Level			Indian Spring Low Water Mean High Water Springs Mean Low Water Springs No Information Lowest Astronomical Tide Mean Higher High Water Mean Lower Low Water Other
Water Line : Sounding Datum Name	1	No Information	String	Unitless	80	The name of the tidal datum to which soundings and drying heights are referenced. [Description] Used when the sounding datum is known but not specified using Attribute: 'Sounding Datum'.
<i>allowed values:</i> No Information						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat) (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.

Feature Lagoon (Area)New ☐ Lagoon

An enclosed area of salt or brackish water separated from the open sea by some more or less effective, but not complete, obstacle (for example: a sand bank). [Description] The name most commonly used for the area of water enclosed by a barrier reef or atoll.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Water Resource Information : Arsenic Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of arsenic per volume of solution. [Description] Arsenic sources include natural deposits, use as a pesticide agent, and from phosphate fertilizers containing arsenic.
<i>allowed values:</i> -999999.0						
Average Water Depth	1	[-999999.0, -999999.0]	Real_Interval	Metre	0	The average water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999.0, -999999.0]						
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
<i>allowed values:</i> noInformation						
Bottom Material Type	3	No Information	Enumeration	Unitless	0	The primary type(s) of material composing the bottom of a body of water.
<i>allowed values:</i> Coral			No Information			Other Rocks and Boulders
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
<i>allowed values:</i> [-999999, -999999]						
Water Resource Information : Chloride Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of chloride per volume of solution. [Description] Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of hydrogen chloride) with a metal, a metal oxide, or an inorganic base. Chloride salts include sodium chloride (common salt), potassium chloride, calcium chloride, and ammonium chloride. Most chloride salts are readily soluble in water.
<i>allowed values:</i> -999999.0						
Water Resource Information : Coliform Concentration	1	-999999.0	Real	Coliform Microbial Density	0	The number of coliform bacteria colonies per volume of solution. [Description] The coliform concentration is an indicator of pollution when testing the sanitary quality of water. Coliform bacteria normally are abundant in the intestinal tracts of humans and other warm-blooded mammals. It is measured in colonies per millilitre of solution, and reported as Coliform Microbial Density.
<i>allowed values:</i> -999999.0						
Water Resource Information : Cyanide Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of inorganic cyanides per volume of solution. [Description] Inorganic cyanides are generally salts of the anion CN-. These are powerful poisons that are toxic to humans and aquatic life.
<i>allowed values:</i> -999999.0						
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
<i>allowed values:</i> noInformation						
New Feature Code	1	BH190	CONSTRAINED_STRING	Unitless	5	Feature Code
<i>allowed values:</i> BH190						

New	Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
<u>allowed values:</u> noInformation							
	Geographic Name Information : Full Name	3	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
<u>allowed values:</u> No Information							
New	(Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc . [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
<u>allowed values:</u> No Information							
	Geographic Name Information : Geographic Name Type	3	No Information	Enumeration	Unitless	0	The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<u>allowed values:</u> Conventional Native Transliterated Unverified Original							
Other							
Historical Original No Information Unverified Transliterated							
Historical Transliterated Other Variant Original							
Native Original Provisional Variant Transliterated							
	Hydrographic Vertical Positioning Information : Hydrographic Depth	1	-999999.0	Real	Metre	0	The depth from a specified sounding datum to the top or surface of a feature (for example: the bottom of a water body). [Description] Recorded depth values are usually positive, however in the case of drying heights they are negative.
<u>allowed values:</u> -999999.0							
	Water Resource Information : Hydrologic Persistence	1	No Information	Enumeration	Unitless	0	The degree of persistence of water in an inland water body (for example: a spring, a flowing stream, a lake or a pond). [Description] Inland water bodies may also include, for example, crevices, ditches, fountains, and water troughs.
<u>allowed values:</u> Dry Perennial							
Ephemeral							
Intermittent							
No Information							
	Water Resource Information : Magnesium Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of magnesium per volume of solution. [Description] Elevated concentrations of magnesium are typically associated with 'hard' water.
<u>allowed values:</u> -999999.0							
	Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<u>allowed values:</u> No Information							
	Geographic Name Information : Name Identifier	3	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<u>allowed values:</u> No Information							
	Water Resource Information : Nephelometric Turbidity	1	-999999.0	Real	Nephelometric Turbidity Units	0	The cloudiness or haziness of a volume of solution as determined by its degree of light scattering. [Description] Turbidity is caused by suspended solids that are generally invisible to the naked eye, for example: suspended clay, silt, organic and inorganic matter, and plankton and other microorganisms. The units of turbidity from a calibrated nephelometer (based on the scattering of a focused beam of light) are called Nephelometric Turbidity Units (NTU).
<u>allowed values:</u> -999999.0							
	Water Resource Information : pH	1	-999999.0	Real	Unitless	0	The logarithm of the reciprocal of hydrogen ion (H+) concentration in gram atoms per liter of an aqueous solution. [Description] The pH (potential of Hydrogen) scale provides an indication of the acidity or alkalinity of a water sample. The scale ranges from 0 to 14, where 7 is neutral, greater than 7 is more alkaline and less than 7 is more acidic. The measure is termed the 'pH unit'.
<u>allowed values:</u> -999999.0							
	Predominant Maximum Water Depth	1	-999999.0	REAL	Metre	0	The average (seasonal) high water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<u>allowed values:</u> -999999.0							

Predominant Minimum Water Depth	1	-999999.0	REAL	Metre	0	The average (seasonal) low water depth, exclusive of high water due to runoff or low water due to drought. [Description] May be biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> -999999.0						
Predominant Water Depth	1	[-999999.0, -999999.0]	Real_Interval	Metre	0	The predominant water depth (the depth of at least 50 percent), determined along a bank-to-bank cross section. [Description] Usually biased toward the maximum depths within the limits of the feature in order to support estimation of trafficability.
<i>allowed values:</i> [-999999.0, -999999.0]						
Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information Other						
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumSMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed '(' and ')' substrings separated by spaces ' '. Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis ')'. The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques)' or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Water Resource Information : Sulfate Concentration	1	-999999.0	Real	Milligrams per Litre	0	The mass of sulfate ions per volume of solution.
<i>allowed values:</i> -999999.0						
Water Resource Information : Temperature	1	-999999.0	Real	Degree Celsius	0	The thermal energy (heat) of a substance. [Description] The quantity of internal energy that a substance contains.
<i>allowed values:</i> -999999.0						

Water Resource Information : Total Dissolved Solids	1	-999999.0	Real	Milligrams per Litre	0	The total mass of dissolved inorganic chemical constituents per volume of solution.
<i>allowed values:</i> -999999.0						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						
Water Resource Information : Water Conductivity	1	-999999.0	Real	MicroSiemens per Centime	0	The electrical conductivity of water. [Description] Electrical conductivity is the ease with which an electric current flows through a conductor per unit length.
<i>allowed values:</i> -999999.0						
Water Resource Information : Water Hardness	1	-999999.0	Real	Milligrams per Litre	0	The 'hardness' of a sample of water as determined by the combined mass of calcium carbonate and magnesium carbonate per volume of solution. [Description] Calcium and magnesium enter water mainly through the weathering of rocks. 'Hard' water has a high mineral content (in contrast with 'soft' water).
<i>allowed values:</i> -999999.0						
Hydrographic Vertical Positioning Information : Water Level Effect	1	No Information	Enumeration	Unitless	0	The relationship between the feature and surrounding (including covering and/or underlying) water.
<i>allowed values:</i> Always Dry Other						
Always Submerged						
Covers and Uncovers						
No Information						
Water Resource Information : Water Type	1	No Information	Enumeration	Unitless	0	The type of available water based on its composition.
<i>allowed values:</i> Alkaline Mineral Saline						
Brackish						
No Information						
Brine						
Not Applicable						
Fresh						
Other						
Seawater

Feature LandAerodrome (Area)

New ☐ Land Aerodrome

An aerodrome on land intended to be used either wholly or in part for the arrival, departure and surface movement of aircraft.

Attribute	Cardinality	Default	Data Type	Units	Length	Attribute Definition
Aerodrome Elevation	1	-999999.0	REAL	metre	0	The vertical distance above Mean Sea Level (MSL) of the highest point of the landing area.
<i>allowed values:</i> -999999.0						
Aerodrome Official Name	1	No Information	String	Unitless	80	The primary official name of an aerodrome as designated by an appropriate authority.
<i>allowed values:</i> No Information						
Airfield Symbol Type	1	No Information	Enumeration	Unitless	0	The type of airfield symbol designation.

	allowed values:	A - Active Civilian E - Abandoned or Closed (with usable runways or landing areas) X - Decoy	B - Active Joint (Civilian/Military) F - Highway Strip	C - Active Military G - Unusable for landing or take-off	D - Active (with less than the minimum facilities) No Information	
Airfield Type	1	No Information	Enumeration	Unitless	0	The type of an airfield based on the size and/or paving of its runways.
	allowed values:	Major No Information	Minor Other	Minor and Hard		Minor and Soft
Airfield Use	3	No Information	Enumeration	Unitless	0	The primary use(s) of an airfield.
	allowed values:	Emergency Major Airfield Parascending Site	General Aviation Aircraft Operating Only Minor Airfield Search and Rescue Airfield		Glider Site No Information Ultralight Site	Hang Glider Site Other Winch Launched Hang Glider Site
Area	1	-999999.0	REAL	squareMetre	0	The area within the delineation of the feature.
	allowed values:	-999999.0				
Basic Encyclopedia (BE) Number	1	noInformation	StructuredText	Unitless	15	The unique identifier of a feature as assigned in the Basic Encyclopedia (a compilation of identified installations and physical areas of potential significance as objectives for attack).
	allowed values:	noInformation				
New Feature Metadata : Cartographic Usability Range	1	[-999999, -999999]	Integer_Interval	Unitless	0	A scale interval within which a feature instance has been determined to be suitable for the purposes of topographic cartography.
	allowed values:	[-999999, -999999]				
Controlling Authority	1	No Information	Enumeration	Unitless	0	The controlling authority responsible for a facility or site. [Description] Controlling authorities may be distinguished by organizational level (for example: national, sub-national, or military district) and/or type (for example: private or public).
	allowed values:	Civilian Other	Joint Military and Civilian Private		Military Public	No Information
New External Links	1	noInformation	StructuredText	Unitless	2E+09	A list of external references such as URLs that may provide ancillary information about this feature instance.
	allowed values:	noInformation				
Facility Operational Status	1	No Information	Enumeration	Unitless	0	The status of operation of a man-made structure, as a whole. [Description] Includes actual operations, operational capability, and planned or proposed man-made structures.
	allowed values:	No Information Partially Operational	Non-operational Planned		Not in Operation Temporarily Non-operational	Operational
New Feature Code	1	GB005	CONSTRAINED_STRING	Unitless	5	Feature Code
	allowed values:	GB005				
New Feature Unique Identifier	1	noInformation	StructuredText	Unitless	254	When a feature is represented with multiple instances (for example instances with different geometry, different scale, or simply different attribute vectors) even though it is the same thing, this unique identifier will be the same regardless of the different representations of the thing. [Description] It is common in large complex data sets to collect the same thing multiple times due to requirements for different security restrictions or geometry requirements for the feature. This unique identifier allows one to find all of the alternative representations of the same thing within the data set.
	allowed values:	noInformation				
Geographic Name Information : Full Name	1	No Information	String	Unitless	200	A complete name that is used to designate the entity as that designation would normally be written by the originating culture on a map or chart. [Description] It is generally considered to consist of a specific part, a generic part, and any articles or prepositions. The order of the parts may vary with the generic part appearing at the beginning, middle or end.
	allowed values:	No Information				
New (Location Country) Designation : GENC Short URN-based Identifier	1	No Information	CodeList	Unitless	24	The short URN-like Uniform Resource Identifier (URI) for a geopolitical entity (for example: a State) or administrative subdivision (for example: a province) as specified by the Geopolitical Entities, Names, and Codes (GENC) Standard. [Description] The GENC Standard specifies a profile of ISO 3166, Codes for the representation of names of countries and their subdivisions; that profile addresses unique U.S. Government requirements for: restrictions in recognition of the national sovereignty of a country; identification and recognition of geopolitical entities not included in ISO 3166; and the use of names of countries and country subdivisions that have been approved by the U.S. Board on Geographic Names. [CodeListDefinition] The combination of a short URN-based codespace (maximum 16 characters), a semi-colon (';'), and a code (maximum 7 characters) that together are limited to a maximum of 24 characters. The codespace identifies a set of 'country code' information, and the code identifies a specific member of that set. The detailed specification for valid values may be accessed at http://nsgreg.nga.mil/genc. [Hyperlink] http://api.nsgreg.nga.mil/N2L?ge:GENC:3:1-2
	allowed values:	No Information		Other		

Geographic Name Information : Geographic Name Type	1	No Information	Enumeration	Unitless		The type of a geographic name based on its scope of use, quality of source and/or its transliteration status.
<i>allowed values:</i> Conventional Native Transliterated Unverified Original			Historical Original No Information Unverified Transliterated			Historical Transliterated Other Variant Original
						Native Original Provisional Variant Transliterated
Highest Elevation	1	-999999.0	REAL	metre	0	The elevation from a specified vertical datum to the highest point on a feature. [Description] In the case of multiple features that may be stacked on each other (for example: a railway on a bridge, a superstructure on a building, or an aerial on a tower) the highest elevation is that of the entire feature stack. For example, the highest elevation of a church is that of its steeple and not that of the roof of the church itself. The church itself may have a height above surface level that excludes the additional height of the steeple superstructure located on the church roof.
<i>allowed values:</i> -999999.0						
ICAO Location Indicator	1	noInformation	StructuredText	Unitless	14	The identifier that is assigned to a location in accordance with rules prescribed by the International Civil Aviation Organization (ICAO) in Document 7910. [Description] If available this indicator shall be used as primary for identification. [DatatypeSpecification] A structured text value specifying an ICAO location indicator. [EncodingSpecification] The 2 letter ICAO code of the State being responsible for the aerodrome in accordance with ICAO Doc7910, followed by either a two-digit integer between 01 and 99 or characters in the range A-Z.
<i>allowed values:</i> noInformation						
Installation Operator	1	No Information	String	Unitless	2E+09	The name of the company or authority operating an installation.
<i>allowed values:</i> No Information						
New Largest Aircraft	1	No Information	String	Unitless	254	The largest aircraft that has used the facility within the past five years.
<i>allowed values:</i> No Information						
Length	1	-999999.0	REAL	metre	0	The dimension of a feature taken along its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line, a river, a rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the length is the distance between the bridge abutments along the bridge centreline. In the case of a dam, the length is the distance along the dam crest. If no established direction of flow or use exists then (1) if the feature is irregular in shape its length is its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the longer axis; for a round feature, the diameter.
<i>allowed values:</i> -999999.0						
Magnetic Variation	1	-999999.0	Real	Arc Degree	0	The angular difference between True North and Magnetic North measured at a given position and date. [Description] The value given indicates whether the angular difference is East (positive) or West (negative) of True North. True North is the direction of the northern point at which the geographic meridian lines meet.
<i>allowed values:</i> -999999.0						
Magnetic Variation Information : Magnetic Variation Date	1	noInformation	StructuredText	Unitless	20	The date on which the magnetic variation was measured. [Structure] MMDDYYYY
<i>allowed values:</i> noInformation						
Note : Memorandum	1	No Information	String	Unitless	2E+09	A narrative or other textual description that records observation(s) and/or event(s) associated with a particular subject (for example: a data instance, a data set or a data processing activity). [Description] No restriction is placed on its length.
<i>allowed values:</i> No Information						
Geographic Name Information : Name Identifier	1	No Information	String	Unitless	18	The unique name identifier element in the NGA Geographic Names Data Base (GNDB). [Description] Typically used together with Attribute: 'Named Feature Identifier' to provide a unique index into the NGA Geographic Names Data Base (GNDB) from which NGA draws all of its feature name information.
<i>allowed values:</i> No Information						
Physical Condition	1	No Information	Enumeration	Unitless	0	The physical condition of a man-made structure, as a whole, including the inside and/or outside of the structure and any contained and/or associated equipment. [Description] The physical condition applies to any phase of the life cycle of a man-made structure from construction to destruction. Examples of man-made structures include roads, canals, buildings, towers, aerodromes and facilities.
<i>allowed values:</i> Construction Intact			Damaged No Information			Destroyed Unmaintained
Port of Entry	1	No Information	Boolean	Unitless	0	An indication that a facility is a port of entry for customs and immigration purposes.
<i>allowed values:</i> False			No Information			True

Restriction Information : Security Attributes Group <resource classification>	1	U	CodeList	Unitless	14	The highest level of classification applicable to the resource, or a portion of the resource, within the domain of classified national security information. [Description] The Classification element is always used in conjunction with the Owner-Producer element. Taken together, the two elements specify the classification category and the type of classification (US, non-US, or Joint). [DatatypeSpecification] A structured text consisting of a single value that is drawn from a codelist, each domain member of which denotes a security classification that is applicable to a resource. [EncodingSpecification] A character string consisting of a one or two-character alphabetic code drawn from a codelist domain specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMCClassificationAll
<i>allowed values:</i> U						
Feature Metadata : Process Step Information : Resource Content Originator	1	No Information	CodeList	Unitless	30	The organization responsible for originating (creating) the content of the resource. [Description] A resource is a set of instances of one or more modeling entities selected according to a single rationale (for example: a common production or publication process); for example, a set of modeling entities whose instances together constitute a 'water resources map'. [CodeListDefinition] An up to thirty-character lower camel-case alphanumeric code drawn from a codelist domain specified by the GEOINT Structure Implementation Profile (GSIP). [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/codelist/ResourceContentOriginatorCode
<i>allowed values:</i> No Information			Other			
Restriction Information : Security Attributes Group <resource dissemination controls>	1	noInformation	StructuredText	Unitless	254	Controls which identify the expansion or limitation on the distribution of the resource. [DatatypeSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [EncodingSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a dissemination control that is applicable to a resource. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMDissem
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource non-intelligence community markings>	1	noInformation	StructuredText	Unitless	254	Information security classification markings for a classified resource originating from non-intelligence components of the US Department of Defense or the US Department of Energy. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes a non-intelligence community marking that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMNonIC
<i>allowed values:</i> noInformation						
Restriction Information : Security Attributes Group <resource owner-producer>	1	noInformation	StructuredText	Unitless	254	The national government or international organization owner(s) and/or producer(s) of the resource. [DatatypeSpecification] A structured text consisting of a sequence of values that are individually drawn from a codelist, each domain member of which denotes an owner-producer that is applicable to a resource. [EncodingSpecification] A character string consisting of an ordered list of space-separated codelist values. The codelist domain is specified by the (US) Intelligence Community implementation profile for information security markings. [Hyperlink] http://metadata.ces.mil/mdr/ns/GSIP/schema/ic/ism/7.0.0/CVEnumISMOwnerProducer
<i>allowed values:</i> noInformation						
Specified Domain Value(s)	1	noInformation	StructuredText	Unitless	2E+09	One or more intended attribute domain values for one or more enumeration or codelist attributes that are not currently valid members of their respective attribute ranges. [Description] The actual attribute domain values may have been previously, or may become in the future, valid members of the attribute domain range. [DatatypeSpecification] A structured text value specifying a set of pairs of attribute and listed domain value. [EncodingSpecification] A string containing zero or more parenthesis-enclosed ('(' and ')') substrings separated by spaces (' '). Each substring consists of an attribute code followed by a colon ':' followed by the preferred name or description for the missing domain value. The domain value name or description may contain any character except the right-parenthesis (')'). The ordering of the substrings is not significant. Each referenced attribute must be of type 'enumeration' or 'codeList'. For example, either of the strings '(cropSpecies:Kumquat)' (cropSpecies:Okra) (farmingMethod:Organic Techniques) or '(CSP:Kumquat) (CSP:Okra) (FMM:Organic Techniques)' could be used in the case that it is intended that two additional domain values be assigned to the 'Crop Species' attribute and one additional domain value be assigned to the 'Farming Method' attribute.
<i>allowed values:</i> noInformation						
Unique Entity Identifier	1	noInformation	StructuredText	Unitless	254	An identifier of a modeling entity collecting metadata (for example: source, lineage, quality) about an entity collection. [Description] The identifier may be specified by a Uniform Resource Name (URN) in accordance with the Internet Engineering Task Force (IETF) RFC2396 and RFC2141. It is based on the Uniform Resource Identifier (URI), a compact string of characters for identifying an abstract or physical resource. The term 'Uniform Resource Name' (URN) refers to the subset of URI that are required to remain globally unique and persistent even when the resource ceases to exist or becomes unavailable. The URN is drawn from one of a set of defined namespaces, each of which has its own set name structure and assignment procedures. [DatatypeSpecification] A structured text value specifying a unique entity (for example: feature or event) identifier. [EncodingSpecification] Structured in accordance with IETF RFC2396 and RFC2141; the namespace is managed by the NGA National Center for Geospatial Intelligence Standards (NCGIS).
<i>allowed values:</i> noInformation						
<i>allowed values:</i> pimGUID						

Width	1	-999999.0	REAL	metre	0	The dimension of a feature taken perpendicular to its primary alignment of use and generally in the horizontal plane. [Description] The primary alignment of a feature is its established direction of flow or use (for example: a road, a power line right-of-way, a river, rapid, and/or a bridge). A feature-specific rule may apply. In the case of a bridge, the width is the distance perpendicular to the bridge centre-line and generally in the horizontal plane. In the case of a dam, the width is the distance perpendicular to (across the) the dam crest. If no such direction of flow or use exists then (1) if the feature is irregular in shape its width is taken perpendicular to the direction of its greatest horizontal dimension (see Attribute: 'Greatest Horizontal Extent'), else (2) if the feature is regular in shape then a shape-specific rule may apply: for a rectangular feature, the length of the shorter axis; for a round feature, the diameter.
